

DOMINION OF CANADA

ANNUAL REPORT

OF THE

DEPARTMENT OF RAILWAYS AND CANALS

FOR THE FISCAL YEAR FROM APRIL 1, 1913, TO MARCH 31, 1914

*Submitted in accordance with the provisions of the Revised Statutes of Canada, 1906.
Chapter 35, Section 33.*

PRINTED BY ORDER OF PARLIAMENT.

OTTAWA

PRINTED BY J. DE L. TACHE, PRINTER TO THE KING'S MOST
EXCELLENT MAJESTY.

1915

To Field Marshal His Royal Highness Prince Arthur William Patrick Albert, Duke of Connaught and of Strathearn, K.C., K.T., K.P., etc., etc., etc., Governor General and Commander in Chief of the Dominion of Canada.

MAY IT PLEASE YOUR ROYAL HIGHNESS,—

The undersigned has the honour to present to Your Royal Highness the Annual Report of the Department of Railways and Canals, of the Dominion of Canada, for the past fiscal year from April 1, 1913, to March 31, 1914. /

F. COCHRANE,
Minister of Railways and Canals.

CONTENTS.

Report of the Deputy Minister.

APPENDICES.

Part I. Statements of Accountant of Department.

II. Statements of the Departmental Solicitor, including—

Agreements for the construction of railways.

Contracts entered into.

Water-power and other public property leased.

Property conveyed.

Damages released.

III. Reports of the General Manager of Government Railways and other officers.

Report of Government Railways' Provident Fund Board.

IV. Report of the Government Chief Engineer for the Western Division of the National Transcontinental Railway.

V. Report of the Board of Engineers, Quebec Bridge.

VI. Reports of the Chief Engineer of the Department and Superintending Engineers and Superintendents of Canals.

VII. Diagrams of locks.

Canal routes and lock dimensions.

VIII. Miscellaneous.

Intercolonial Railway, distances on.

Windsor Branch Railway, distances on.

Prince Edward Island Railway, distances on.

Abstract statements of yearly traffic on the Government Railways.

Dates of opening and closing canals, season 1913.

Comparative statement of canal freight, seasons 1912 and 1913.

IX. Railway Subsidies, Acts respecting.

X. Photographs and plans.

MAPS.

1. General map of the Dominion.
2. Northern parts of British Columbia and Alberta.
3. Southern parts of British Columbia and Alberta.
4. Manitoba and part of Saskatchewan.
5. Ontario and Manitoba.
6. Ontario and Quebec.

7. Nova Scotia, New Brunswick, Prince Edward Island and part of Quebec.
8. Sault Ste. Marie Canal.
9. Welland Canal.
10. Trent Navigation and Murray Canal.
11. St. Lawrence, Ottawa, Rideau and Richelieu.

REPORT
OF THE
DEPUTY MINISTER OF RAILWAYS AND CANALS
FOR THE YEAR ENDING MARCH 31, 1914.

To the Honourable F. COCHRANE,
Minister of Railways and Canals.

SIR,—I have the honour to submit the annual report of the Department of Railways and Canals for the fiscal period of twelve months ended March 31, 1914.

The annual reports of the engineers, together with general and special reports from superintendents, both of railways and canals, and from other officers in the department are given in appendices. These include the report of the General Manager of Government Railways; the report of the Government Chief Engineer of the western division of the Transcontinental Railway; the report of the Chairman of the Quebec Bridge Engineers' Board; and the report of the Chief Engineer of the Department.

In Part I will be found statements of the accountant of the department, showing the amounts expended during the past fiscal year in construction, repair and maintenance of the several works under the department; also statements showing total expenditure on each canal since its construction, and on each of the Government railways; also a statement showing payments made, year by year, to subsidized railways, with the aggregates of such payments.

In Part II are the statements of the Departmental Solicitor of the contracts and agreements entered into during the year.

GENERAL SUMMARY.

During the twelve months of the past fiscal year 1913-14 the expenditures made by or through the department on its several works of operation, maintenance and construction, both railway and canal, and in furtherance by subsidy, under specific votes granted by Parliament, of railway enterprises in various parts of Canada other than the Government roads, also the revenue derived from the Government works, aggregate as follows:—

The total railway expenditure amounted to \$57,240,981.57, of which \$21,646,095.15 was charged to capital, \$13,570,525.45 to revenue, and \$19,420,255.36 to income.

5 GEORGE V., A. 1915

The total Government expenditure on canals prior to and since July 1, 1867, to March 31, 1914, amounts on capital account to \$106,981,780.76, of which \$20,593,866.13

The railway expenditure on capital account included \$4,329,694.68 for the Intercolonial Railway, \$129,574.95 for the Prince Edward Island Railway, \$12,670,108.27 for the eastern division (from Moncton to Winnipeg) of the National Transcontinental Railway, which is in course of construction by a board of commissioners, \$4,498,717.25 for the Hudson Bay Railway, and \$2,604,105.61 for the Quebec Bridge.

The railway expenditure on income included a total of \$19,036,236.77 paid as subsidies to railways other than the Government roads, and \$263,606.59 for the Board of Railway Commissioners for Canada.

The expenditure on the Intercolonial Railway amounted to \$17,196,943.68, namely, \$4,329,694.68 on capital account, and on revenue account (working expenses) \$12,867,249. On the maintenance of the Windsor Branch the expenditure was \$26,486.98, charged to revenue account.

On the Prince Edward Island Railway, the total expenditure was \$700,990.32, of which \$129,574.95 was charged to capital and \$571,415.27 to revenue.

The expenditure on canals aggregated \$4,583,558.85, of which \$2,829,661.34 was chargeable to capital account, \$389,284.75 to income, \$745,220.81 for staff, and \$619,391.95 for repairs, the last two amounts being charged to revenue.

Adding to the above for miscellaneous expenditures common to both branches, the sum of \$5,671.08, the total expenditure for the year on railways and canals was \$61,830,211.50.

The total revenue derived from the Government railway and canal works was \$13,774,505.43, of which the railways produced \$13,394,317.37, and the canals \$380,188.06,* the sum of \$259,277.01 being derived from hydraulic and other rents.

The total Government expenditure on railways prior to and since Confederation (July 1, 1867) up to March 31, 1914, amounts, on capital account, to \$328,265,788.28, including expenditure on the Quebec Bridge, and also the sum of \$25,000,000 granted to the Canadian Pacific Railway Company for its main line; also the amount, \$660,683.09, expended on the Annapolis and Digby Railway. In addition, there has been expended from the consolidated fund a total of \$277,062,106.49, covering the operating expenses of the Government roads, and \$67,566,152.69 subsidies other than the main line of the Canadian Pacific Railway, making a total expenditure of \$605,327,594.77. Of this amount, the sum of \$13,881,460.65 was expended prior to Confederation, namely, on the construction of portions of what is now the Intercolonial Railway system, \$10,766,725.54, and on the construction of the Prince Edward Island Railway, \$3,114,735.11.

*Under the authority of an order in council, dated June 22, 1905, the system of charging tolls for the passage of vessels and goods was abolished on all the canals of the Dominion. Records, however, are kept for statistical purposes, and the compilation of the resultant figures is given in a separate report issued by the department.

SESSIONAL PAPER No. 20

was expended prior to Confederation, and from the consolidated fund, for operation, maintenance and repairs, to \$35,909,857.60, making a total of \$142,891,638.36.

The total expenditure on the two branches, railways and canals, up to March 31, 1914, is as above, \$748,219,533.13; adding to which for general expenditures embracing both, the further sum of \$830,659.15, the grand total expenditure amounts to \$749,050,192.28.†

The total revenue collected since July 1, 1867, to March 31, 1914, amounts, from the Government railways, to \$194,277,273.89, and from the canals to \$15,329,362.83, making a total of \$209,606,636.72.

Details in tabulated form showing the general classes and directions of the above expenditures and revenues will be found in the statements of the accountant of the department, printed in the appendices, Part I herewith.

GOVERNMENT RAILWAYS IN OPERATION.

The Government railways are the Intercolonial, the Windsor Branch (maintained only and leased for operation), and the Prince Edward Island Railway.

By an Order in Council, dated May 5, 1913, "The Government Railways Managing Board," by whom the operations of these railways had been conducted since the 1st of April, 1909, was abolished, and their supervision and direction was placed in the hand of a "General Manager of Government Railways," Mr. F. P. Gutelius being appointed to that position as from May 1, 1913.

Details respecting these railways and their operation will be found in the appendices, Part III, containing reports from the General Manager and the officials of these roads.

The Intercolonial Railway operations resulted in a profit of \$179,362.78, but this sum, at the close of the year, was transferred to the Equipment Renewal Account, and was expended as part of the working expenses, making their total \$12,867,249, to which is to be added \$11,300 paid under special votes, as compassionate allowances, making the total \$12,878,549. The total earnings amounted to \$12,878,549.

The Windsor Branch maintenance expenditure amounted to \$26,486.98; the Government share of the earnings credited to the branch amounted to \$61,517.52, leaving a profit of \$35,030.54.

The Prince Edward Island Railway working expenses amounted to \$571,415.37, its earnings amounted to \$409,616.74, the deficit being \$161,798.63.

†This amount does not include the annual payment of \$119,700 to the provincial government of Quebec being interest at the rate of 5 per cent on the sum of \$2,394,000 up to 1905, granted by 47 Victoria, c. 8 (1884), nor the annual payment of \$107,730, being interest at the rate of 4½ per cent since and including 1905, on the said sum of \$2,394,000, for the line between Ottawa and Quebec, which sum was transferred to the public debt as a liability, and is dealt with by the Finance Department. (See Public Accounts, 1893-4, page 46, and 1906, page 79.)

INTERCOLONIAL RAILWAY.

This railway extends from the Atlantic ocean ports of Halifax, St. John, Sydney, and North Sydney, to Montreal.

On March 1, 1898, the operations of the Intercolonial, the westerly limit of which previously was Lévis, opposite Quebec, were extended to Montreal by means of leases obtained from the Grand Trunk and Drummond County Railway Companies, making an addition of 169.81 miles to the operation of the Government line.

The leasing agreement for an undivided half share or interest, made with the Grand Trunk Railway Company, and dated February 1, 1898, was confirmed, with modification, by the Act 62-63 Vic., chap. 5 (1899). It covers the distance between Ste. Rosalie station and the city of Montreal, with termini in that city, also the Jacques Cartier junction, the Chaudiere bridge and its approaches, and the use of the Victoria bridge over the River St. Lawrence above Montreal. Its term extends for a period of ninety-nine years from March 1, 1898, renewable, in like terms of ninety-nine years each, forever; the annual rental being fixed at \$140,000.

Under authority of the Act 62-63 Vic., chap. 6 (1899), the Drummond County railway from Chaudiere to Ste. Rosalie, together with the branch from St. Leonard to Nicolet, was acquired by the Dominion; conveyance being made by a deed dated November 7, 1899.

On October 1, 1904, the Canada Eastern railway from Gibson to Loggieville, 123.67 miles, was purchased, and on April 19, 1905, the mortgaged Fredericton and St. Mary's bridge, with connected property, 1.33 mile, was surrendered to the Government.

In September, 1911, the branch line, 12.52 miles long, from Ferrona Junction to Sunny Brae, was acquired and operated.

The length of the railway main line is 1,457.77 miles. 26.09 miles are double-tracked. There are of passing sidings 134.37 miles, and of other sidings and spurs 347.59 miles.

FINANCIAL STATEMENTS.

CAPITAL ACCOUNT EXPENDITURE.

The expenditure on capital account during the fiscal year ended March 31, 1914, amounted to \$4,331,999.88, against which there are credits amounting to \$2,305.20, making the net expenditure of the year, \$4,329,694.68, and bringing the total capital expenditure on the whole railway as amalgamated under the Acts 54-55 Vic., chap. 50 (1891), and 62-63 Vic., chaps. 5 and 6 (1899), together with the acquired Canada Eastern Railway, up to \$101,467,501.85.

SESSIONAL PAPER No. 20

The principal items charged to capital during the year were as follows (omitting cents):—For new terminal facilities at Halifax, \$1,033,834; for rolling stock, \$993,380; for strengthening bridges, \$134,582; for increased accommodation and machinery at Halifax, \$107,485; for locomotive and car shops with equipment at Moncton, \$132,170; for Sydney Mines diversion, \$17,306; for diversion at Chatham and Branch to wharf, \$45,271; for increased accommodation at Truro, \$91,008; for increased accommodation along the line, \$128,203; for improvements at Point Tupper, \$69,842; for surveys and inspections, \$40,000; for increased accommodation at St. John, \$20,000; for docks and wharfs at Halifax, \$308,769; for improvements at Lévis, \$58,025; towards the construction of the Dartmouth to Deans railway, \$700,656; for safety appliances for equipment, \$17,289; for installation of telephone system for operating trains, \$39,270; for installation of block system for operation, \$55,183; for double-tracking Chaudière curve to St. Romuald, \$43,098.

REVENUE ACCOUNT EXPENDITURE.

The expenditures on revenue account—working expenses—are grouped, as usual, under five main heads, each divided into a number of sub-heads.

These expenditures for the fiscal year ended March 31, 1914, were as follows:—Maintenance of way and structures, \$2,191,321.96, against which is a credit of \$7,944.07, for maintaining joint tracks, yards and other facilities, leaving the net amount, \$2,183,377.89; maintenance of equipment, \$2,802,488.70; traffic expenses, \$283,268.01; transportation expenses, \$7,340,844.64, against which is a credit of \$52,982.18, for operating joint yards and terminals, leaving the net amount, \$7,287,862.46; general expenses, \$301,251.94. The aggregate of the expenditures under these five heads for the year was \$12,867,249; adding to which \$11,300 paid as “compassionate allowances,” under special votes, the total is \$12,878,549.

In the above expenditures, there were included the following items (omitting cents):—Maintenance of Way and Structures: for ties, \$279,719; for rails, \$178,024; for other track materials, \$127,445; roadway and track, \$757,218; removal of snow and ice and sand, \$125,210; and buildings, fixtures and grounds, \$285,509. Maintenance of Equipment: for repairs to locomotives, \$890,397; renewals of locomotives, \$213,050; for repairs to passenger cars, \$317,607; renewals to passenger cars, \$106,524; for repairs to freight cars, \$860,932; for renewals of freight cars, \$159,787. The traffic expenses included, for advertising, \$48,632; and for outside agencies, \$119,724. The transportation expenses included: for station employees, \$881,369; yard conductors and brakemen, \$209,156; for yard enginemen, \$182,696; for fuel for yard engines, \$44,509; engine house expenses, \$182,696; for road enginemen, \$791,114; for road trainmen, \$920,660; and for fuel for road engines, \$2,279,326. The general expenses included salaries and expenses of clerks and attendants, \$127,685; and pensions, \$94,335.

Details of expenditure will be found in the report of the Comptroller, Part III, of the appendices.

GENERAL NOTES.

The gross earnings of the railway for the year amounted to \$12,878,549, derived as follows:—

The passenger earnings were \$3,674,878.75; the freight earnings, \$8,469,590.33; the mail and express earnings and miscellaneous, \$734,079.92.

The total engine mileage was 10,234,923; the total train mileage was 8,344,470; and the total car mileage, 122,815,218.

The gross earnings per mile of railway (1,456.97 miles) were \$8,839.27; per engine mile, \$1.43; per train mile, \$1.54; and per car mile, 10.49 cents.

The expenses per mile of railway were as follows: Maintenance of way and structures, \$1,498.57; maintenance of equipment, \$1,923.51; traffic expenses, \$194.42; transportation expenses, \$5,002.07; general expenses, \$212.94.

The expenses per train mile were: Maintenance of way and structures, 26.16 cents; maintenance of equipment, 33.58 cents; traffic expenses, 3.39 cents; transportation expenses, 87.36 cents; general expenses, 3.71 cents; total, 154.20 cents.

The ratio of expenses to gross earnings was as follows: Maintenance of way and structures, 16.95 per cent; maintenance of equipment, 21.76 per cent; traffic expenses, 2.20 per cent; transportation expenses, 56.59 per cent; and general expenses, 2.41 per cent.

Comparing the earnings for the twelve months ended on March 31, 1913, with the corresponding period ended March 31, 1914, the gross earnings for the latter year show an increase of \$894,066.31. The passenger traffic produced an increase of \$191,431.43; the freight traffic an increase of \$440,530.20; the mails, express traffic and miscellaneous, an increase of \$216,804.68. The increase per mile of railway was \$676.29, and per train mile 7 cents.

The number of passengers carried was 3,983,511, an increase compared with the previous year of 220,396. There was an increase of 189,071 in the number of local passengers, and of 31,325 in the number of through passengers.

Of revenue producing freight 5,287,740 tons were carried, an increase, compared with the previous year, of 84,271 tons. The local freight decreased 129,795 tons, and the through freight increased 214,066 tons.

Details of the principal items of this freight will be found in the statements of the Comptroller, Appendix III, classified as follows; Products of agriculture, 568,659 tons; animals and their products, also poultry, game and fish, 127,739 tons; products of mines, 1,634,208 tons; products of forest, 1,347,466 tons; manufactures, immigrants' effects, and miscellaneous, 1,609,668 tons.

The rolling stock equipment will be found specifically described in the report of the mechanical accountant in appendix, Part III. Included in the purchases of the year were 38 locomotives (4 passenger, 25 freight, and 9 switching), all bought on

SESSIONAL PAPER No. 20

capital account and one bought on renewals account (revenue). The number of locomotives on March 31, 1914, was 388.

The value of stores on hand at the close of the year was \$2,179,882.08, comprising ordinary stores and fuel, \$1,380,126.64; roadway and bridge material, \$799,755.44.

COMPARATIVE STATISTICS—YEARS 1912-13 AND 1913-14.

In 1912-13 the average tons of freight carried per train, producing revenue, was 272.08 and the number of passengers, 65.03; in 1913-14 the average freight tonnage was 270.75, and passenger, 68.88.

In 1912-13 the average tons per loaded car, producing revenue, was 18.00, and the number of passengers, 9.69; in 1913-14 the number of tons was 17.83, and of passengers, 9.78.

The number of tons per train, all freight, in 1912-13, was 276.27, and 1913-14, 275.74.

The number of tons per car, all freight, in 1912-13, was 18.27, and 1913-14, 15.06.

The average distance each ton of freight was carried in 1912-13 was 269.53 miles, and in 1913-14, 263.38. The average distance passengers were carried in those years was 51.72 miles and 53.43, respectively.

The average number of loaded cars per train in 1912-13, was 15.12 cars of freight, and 6.71 cars of passengers; in 1913-14 the number of freight cars per train was 15.18 and of passengers, 7.04.

The average number of empty cars per train in 1912-13 was 2.52, and in 1913-14, 3.13.

In 1912-13 the average of train miles per mile of road was, for freight trains, 3,510.99, and for passenger, 2,038.73; in 1913-14 these figures were, respectively, 3,606.74 and 2,120.54.

In 1912-13 the average per mile of road of revenue producing freight carried one mile, was 955,261.74 tons, and passengers, 132,569.26; in 1913-14 the figures were, freight, 976,507.62 tons, and passengers, 146,052.63.

The number of tons all freight, per mile of road, carried one mile in 1912-13, was 969,998.91, and in 1913-14, 994,519.93.

The train mileage in 1912-13 was: passenger, 2,993,156 miles; freight, 5,154,663 miles; in 1913-14: passenger, 3,089,559 miles; freight, 5,254,911 miles.

The loaded car mileage in 1912-13 was 77,932,195 miles, and in 1913-14, 79,794,405 miles.

The empty car mileage in 1912-13 was 12,978,505 miles, and in 1913-14, 16,439,758 miles.

5 GEORGE V., A. 1915

The caboose car mileage in 1912-13 was 4,792,595 miles, and in 1913-14, 4,831,573 miles.

The total car mileage in 1912-13 was: passengers, 20,083,733 miles, and freight, 95,703,295 miles; in 1913-14 the figures were: passenger, 21,749,482, and freight, 101,065,736.

The total freight moved in 1912-13 was: 5,372,938 tons; of this quantity 5,203,469 tons were revenue producing. In 1913-14 the total freight moved was 5,501,582 tons, of which 5,287,740 tons were revenue producing.

Repairs to passenger cars cost, per car, in 1912-13, \$623.93; or per car mile, 1.48 cents; and in 1913-14, \$606.12, or per car mile, 1.46 cents.

Repairs to freight cars cost, per car, in 1912-13, \$52.85, or per car mile, .68 of a cent; and in 1913-14, \$64.37, or per car mile .85 of a cent.

Repairs to locomotives cost, per locomotive, in 1912-13, \$2,062.62, or per locomotive mile, 7.68 cents; and in 1913-14, \$2,294.84, or per locomotive mile, 8.70 cents.

WINDSOR BRANCH.

The road is 32 miles in length. It extends from Windsor Junction on the Intercolonial railway, to Windsor, N.S.

The railway is operated by the Dominion Atlantic Railway Company, formerly the Windsor and Annapolis Railway Company. The company pay all charges in connection with the working of the traffic, two-thirds of the gross earnings being allowed them, the Government taking the remaining one-third, and assuming all cost of maintenance of the road and works. This arrangement is carried out under an agreement dated December 13, 1892, which extends for a further term of twenty-one years, arrangements similar to those made in 1871.

This agreement expired on December 31, 1913. The company, however, have been allowed to continue operation pending new arrangements.

All charges for superintendence and supervision of maintenance of work are borne by the Government; the duty of supervision is performed by the chief officers of the Intercolonial Railway.

The Government share of the earnings for the twelve months ended on March 31, 1914, amounted to \$61,517.52, a decrease compared with the previous year of \$6,729.18. The decrease was in freight traffic, the passenger traffic having increased. The cost of maintenance was \$26,486.98, leaving the net Government earnings \$35,030.54.

PRINCE EDWARD ISLAND RAILWAY.

This is a narrow gauge railway, 3 feet 6 inches. It extends from Tignish to Georgetown, 158.60 miles, and from Charlottetown to Murray Harbour, 52.30 miles, with branches to Souris, Elmira and Cape Traverse. The length of the road operated was 275.2 miles.

SESSIONAL PAPER No. 20

CAPITAL ACCOUNT.

There was an addition of \$129,574.95 to the expenditure on capital account during the year ended on March 31, 1914, making the total capital expenditure \$8,920,369.01. The principal item was \$117,412.30 for the car ferry between Cape Traverse, P.E.I., and Cape Tormentine, on the mainland.

REVENUE ACCOUNT.

The gross earnings amounted to \$409,616.74, and the working expenses to \$571,415.37, leaving a deficiency of \$161,798.63. Compared with the previous year, there was an increase of \$20,142.67 in the gross earnings, and an increase of \$81,443.03 in the working expenses.

The expenditure on revenue account (working expenses) is classified, as on the Intercolonial, under five heads, with their several sub-heads. It is comprised in the following:—Maintenance of way and structures, \$160,334.29; maintenance of equipment, \$95,622.05; traffic expenses, \$5,943.46; transportation expenses, \$292,182.66; and general expenses, \$17,332.91.

The number of passengers carried was 445,739, an increase compared with the previous year of 11,851, and this traffic produced \$183,649.79, an increase of \$12,301.22. Of freight, 115,751 tons were carried, a decrease of 7,033 tons. The freight earnings amounted to \$184,004.11, an increase of \$3,657.80. The earnings from mail and sundries amounted to \$41,962.84, an increase of \$4,184.65.

The freight carried was: Agricultural products, 32,013 tons; animals, poultry, fish and their products, 16,621 tons; products of mines, 16,989 tons; products of forests, 13,835 tons; manufactures, household goods, furniture and miscellaneous, 36,293 tons.

The engine mileage was 461,618 miles; the train mileage, 317,169 miles; the car mileage, 2,313,513 miles.

The gross earnings per mile of railway amounted to \$1,478.76; per engine mile, 98 cents; per train mile, 129 cents; and per car mile, to 17.71 cents.

The working expenses per mile of railway aggregated \$2,062.87, and per train mile, 180.16 cents.

The value of stores on hand on March 31, 1914, was \$67,669.97, comprised in fuel, \$19,392.95; road material, \$14,667.07; and miscellaneous, \$33,609.95.

Details will be found in the reports of the Comptroller and of other officers, in the appendices, Part III.

GOVERNMENT RAILWAYS PROVIDENT FUND.

The Act of 1907, chap. 22, establishing a fund to be known as "The Intercolonial and Prince Edward Island Railway Employees' Provident Fund," came into effect on April 1, 1907. The main feature is that a contribution of 1½ per cent of each month's salary and wages is made by each employee to the fund, to which a like

5 GEORGE V., A. 1913

amount is added by the railway to the limit of \$100,000 a year. Interest at 3 per cent per annum is allowed on the employee's contribution. On retirement, after a certain length of service, the employee will receive for the rest of his life a monthly allowance for each year of his service, equal to $1\frac{1}{2}$ per cent of his average monthly salary or wages for the preceding eight years; the minimum allowance to be \$20 a month, and the maximum two-thirds of his said average monthly pay. In the event of the death of a contributor to the fund while still in the service, his widow, children or relatives may be paid a sum equal to 90 per cent of his total contributions. The fund is administered by a board of five persons, three of whom are officers of the railway, the remaining two being elected annually by the contributing employees. The Act was amended by the Act of 1908, chap. 37, and again by the Act of 1909, chap. 20. Under this last, the Government Railways Managing Board nominates one of its members as chairman of the Provident Board.

The seventh annual report of the Board, which is printed in Appendix III hereto, shows that at the beginning of the fiscal year, April 1, 1913, there was a balance to the credit of the fund of \$346,028.57, and that during the past fiscal year, the contributions of the railway employees amounted to \$99,805.03. Adding to this a like contribution from the Government railways, and the sum of \$1,236 for refunds, etc., together with interest accrued, \$10,048.32, the total of the fund for the year aggregated \$556,922.95. The total expenditure during the year was \$167,701.19, of which \$152,674.81 was paid out in retiring allowances and \$6,369.75 for contributions refunded, leaving at the credit of the fund on March 31, 1914, the sum of \$389,221.76.

In the course of the year 108 employees were retired and pensioned, and 37 pensioners died.

During the seven years that the system has been in operation the total contributions by employees amount to \$565,550.34, and a like sum being added by the railways makes the total \$1,131,100.68. Six hundred and forty-nine employees have been pensioned, of whom 164 have died, leaving 485 in enjoyment of their allowances at the close of the fiscal year 1914. The total paid out for retiring allowances is \$723,969.03.

HUDSON BAY RAILWAY.

During the past fiscal year, closed on March 31, 1914, the track has been laid for the first 102 miles from The Pas, and of this distance 56 miles have been fully ballasted and surfaced. Grading has been practically completed up to the 150th mile, and the right of way cleared up to the first crossing of the Nelson river, or for a distance of 242 miles.

At Port Nelson, work is in progress. Plant, materials, supplies and men were forwarded at the opening of navigation in 1913. Housing accommodation for the men and supplies has been built, and drainage works and construction railways carried out. A radio telegraph station has been installed, and brought into operation. Connection has been made by a tote road between Port Nelson and the end of the railway.

SESSIONAL PAPER No. 20

The bridge over the River Saskatchewan at The Pas was completed. This bridge consists of four fixed spans, and one swing span.

The work of construction for the first 185 miles, from The Pas to Thicket Portage, was placed under contract in August, 1911. A contract for a further distance of 68 miles, from Thicket Portage to Split Lake Junction, was let on September 20, 1912, and a third contract, covering the distance, 165 miles, from Split Lake Junction to Port Nelson, on December 17, 1912. The total distance is 418 miles.

The expenditures during the year aggregate \$4,498,717.25, bringing the total expenditure up to \$6,087,032.67.

The reports of the Engineer in Charge and of the Chief Engineer will be found in the appendices, and a number of interesting photographs at the end.

NATIONAL TRANSCONTINENTAL RAILWAY.

Under an agreement, dated July 29, 1903, ratified by the Dominion Act of that year, chap. 71, and under a modifying agreement dated February 18, 1904, ratified by the Act of that year, chap. 24, the Grand Trunk Pacific Railway Company, a company incorporated by the Act of 1903, chap. 122, have undertaken certain obligations in respect of the construction and operation of a line of railway, wholly upon Canadian territory, between the city of Moncton, in the province of New Brunswick, and the navigable waters of the Pacific ocean. The railway is composed of two divisions, namely, the eastern division, between Moncton and Quebec, thence westerly through the northern part of the provinces of Quebec and Ontario, and, in the province of Manitoba, to the city of Winnipeg, and the western division, between Winnipeg and the Pacific ocean. The eastern division is being constructed by the Government under commissioners appointed by the Governor in Council, and on completion is to be leased to and maintained and operated by the company, who undertake to construct, at their own cost, and maintain and operate, the western division. The lease of the eastern division is to be for a period of 50 years, at a rental of three per cent per annum upon the cost of its construction; the first seven years of the term to be free of rent; both divisions are to be equipped by the company, the first equipment to be of a value of not less than \$20,000,000.

By way of assistance to the company in the construction of the western division, it is provided that the Government shall guarantee payment of the principal and interest of an issue of bonds to be made by the company for an amount sufficient to produce a sum equal to 75 per cent of the cost of its construction; this amount is not to exceed \$13,000 per mile in respect of the prairie section from Winnipeg to the eastern limit of the Rocky Mountains (such limit to be established by the Chief Engineer of the company and the Chief Engineer of the Government, as the result of actual surveys). This limit has been established as the east bank of Wolf creek, a point 120 miles west from Edmonton.

By the Act of 1905, chap. 98, three deeds of trust by way of mortgage, set out in the said Act, were ratified and confirmed, namely, one dated June 10, 1905, between the Grand Trunk Pacific Railway Company, the Royal Trust Company, and His Majesty, to secure the issue of first mortgage bonds; the second dated March 15, 1905, between the Grand Trunk Pacific Railway Company, the National Trust Company, and the Grand Trunk Railway Company, to secure the issue of second mortgage bonds, and the third, also dated March 15, 1905, between the Grand Trunk Pacific Railway Company, the National Trust Company, and the Grand Trunk Railway Company, to secure the issue of first mortgage bonds in respect of the branch line designated as the "Lake Superior Branch."

Payments from the proceeds of the bonds of the company for work done, etc., on the western division, are made from time to time on certificates given by the Government Chief Engineer of this division, showing approved expenditures.

By the Act of 1909, chap. 19, authority was given for aiding in the completion of the construction of the "prairie" section by a loan to the company of \$10,000,000, to be secured, as collateral, subject to any prior lien, by a mortgage on the "prairie" section of their road; such loan to bear interest at the rate of 4 per cent per annum, and to be repayable in ten years.

This loan, which is dealt with by the Finance Department, was duly made; the mortgage deed being dated May 22, 1909.

By the Act of 1913, chap. 23, authority was given for a loan to the company not exceeding \$15,000,000, at 4 per cent interest, the loan being repayable by July 1, 1923. Under this authority, \$15,000,000 has been advanced to the company. Its debentures to an equal amount have been taken by the Government in pledge as security for this loan, as provided by the Act.

By the Act of 1913, chap. 24, authority was given for the purchase of 3 per cent bonds of the company to the extent of the balance of the authorized issue. Such balance to the amount of £6,800,000 has been purchased by the Government.

The several Government expenditures on the Eastern Division are to be made from appropriations by Parliament for the purpose, and on the recommendation of the Minister of Railways and Canals, to whom accounts of all receipts, expenditures and liabilities are to be furnished monthly.

The Board of Commissioners are required to furnish annually a report to the Governor in Council, through the Minister of Railways and Canals, showing the receipts and expenditures of the year, and other information as to the railway, which report is to be submitted to Parliament.

The headquarters of the Board are in the city of Ottawa.

By various Acts and Orders in Council, the time for completion has been extended, and by the Act of 1914 (the Grand Trunk Pacific Railway Guarantee Act), sec. 11, it was provided that "notwithstanding anything contained in the said trust deed of

SESSIONAL PAPER No. 20

tenth of June, 1905, or in any Act or Order in Council heretofore passed, the date for completion of the western division shall be the 31st of December, one thousand nine hundred and fifteen." By sec. 2 of this Act, the "Western Division" was defined as extending from the city of Winnipeg to the Pacific ocean.

By the Act of 1912, chap. 39, the construction of the Eastern Division, and its operation, until completed and leased to the Grand Trunk Pacific Railway Company, was placed under the charge and control of one commissioner (in place of four) to be appointed by the Governor in Council, and to hold office during pleasure. By an Order in Council, dated April 4, 1912, Mr. R. W. Leonard, C.E., the Chairman of the Commission as then existing, was appointed as such commissioner.

The report of the Board for the fiscal year ended March 31, 1914, has been prepared, and will be laid before Parliament in due course.

The following summary shows the position at the close of the year.

EASTERN DIVISION.

(Moncton to Winnipeg.)

The total mileage from Moncton, N.B., to the west side of Water street, Winnipeg, is 1,804.52 miles. This, however, includes the Quebec bridge over the River St. Lawrence, in course of construction, the length of which will be 1.10 mile. Track laying between Moncton and Winnipeg was completed (with the exception of the Quebec bridge) in November, 1913, the last spike being driven on the 17th of that month.

Pending the completion of the Quebec bridge, the communication across the river will be made by a train ferry which has been built in England, and was launched in January, 1914.

Up to March 31, 1914, the track was laid in the main line for a distance of 1,803.42 miles, together with 423.26 miles of sidings and yards, to which is to be added for double-track and the line from the Quebec bridge to Quebec, 20.79 miles, making a total of 2,247.47 miles of track. The bridges were completed to the extent of 97.2 per cent.

The total expenditures by the commissioners during the fiscal year ended March 31, 1914, on the entire Eastern Division, amounted to \$12,684,663.16, making their total expenditure from the date of their organization in September, 1904, to that date, \$142,967,999.02, which includes \$36,182.91 for operation in the year 1912-13 of the section from Moncton to Edmundston, N.B.

During the year, from May 1, 1913, to March 31, 1914, the road was operated to a limited extent by the Intercolonial railway, for the distance, 285.25 miles, between Moncton, N.B., and Escourt, P.Q., a point 54.85 miles west of Edmundston, N.B. Details will be found in the statements of the Comptroller and Treasurer of Government Railways, herewith (Appendix Part III.)

5 GEORGE V. A. 1915

Detail summaries of their expenditure are furnished by the Chief Accountant of the Commission. They show the total for the past fiscal year to be made up as follows:—Headquarters, \$172,068.60; construction, \$12,506,730.14; and transport, \$5,864.42.

The total expenditure from September, 1904, to March 31, 1914, was as follows:—Construction, \$137,140,638.66; location, \$2,943,328.85; transport, \$1,030,901.41; headquarters, \$1,816,947.19; and operation, \$36,182.91.

The statement of the Accountant of the Department (Part I, of the appendices hereto) shows the expenditure on the Eastern Division for the year ended March 31, 1914, to be \$12,670,108.27,* and the total expenditure on this division up to that date \$142,970,793.19,** the expenditures yearly being as follows:—

1904	\$	6,249 40
1905		778,491 28
1906		1,841,269 95
1907		5,537,867 50
1908		18,910,449 41
1909		24,892,422 68
1910		19,968,126 86
1911		23,488,208 40
1912		21,110,683 05
1913		13,766,916 39
1914		12,670,108 27*
Total	\$142,970,793 19**	

WESTERN DIVISION.

The western division extends from the western boundary of the Winnipeg terminals on the east bank of the River Assiniboine, in the city of Winnipeg, to the city of Prince Rupert, on the Pacific Coast, a distance of 1,745 miles.

It is divided into two sections, namely, the "Prairie Section," extending from Winnipeg to the east bank of Wolf creek—a point 120 miles west of Edmonton, the capital of the province of Alberta—a distance of 915 miles, and the "Mountain Section," which extends from the east bank of Wolf creek to Prince Rupert, a distance of 830 miles. The terminals will extend for a further distance of 3.23 miles around the water front of the city of Prince Rupert.

* The report of the National Transcontinental Railway Commissioners shows the expenditure of the year to be \$12,684,663.16, a difference of \$14,554.89. This is due to an adjustment made by the Departmental Accountant during the fiscal year, as follows:—

Cheques outstanding returned to Finance Department.	\$13,593 70	
Refunds of credits on account of previous years	961 19	
		\$14,554 89

** The report of the National Transcontinental Railway Commissioners shows a total of \$142,967,999.02, a difference of \$2,794.17. This difference is to be adjusted in 1914-15.

SESSIONAL PAPER No. 20

This division is in course of construction by the Grand Trunk Pacific Railway Company, under the Government guarantee agreements above mentioned, and the Government Chief Engineer of the Division, on whose certificates payments are made to the company, is Mr. Collingwood Schreiber, C.M.G., whose report, showing the position of the work at the close of the fiscal year, March 31, 1914, will be found printed in the appendices hereto, Part IV.

Of this, the following is a brief summary:—

“PRAIRIE SECTION.”

Throughout the year, a well-equipped passenger and freight service has been carried on over the whole road from Winnipeg to Wolf Creek. The work done has been principally work of maintenance.

On this section the maximum grade against eastbound traffic is four-tenths of one per cent, and against westbound traffic five-tenths of one per cent.

“MOUNTAIN SECTION.”

The energetic prosecution of works on this section resulted in grading being sufficiently completed by the end of the fiscal year to enable rail connection to be made between the western and eastern tracks shortly after, giving rail trackage from Winnipeg to Prince Rupert, though there were temporary lines constructed around some unfinished cuttings, several pile bridges to be filled in, and certain steel bridges to be built, of which eleven were under construction, and ten not commenced; meantime, passage of trains was obtained by means of temporary pile bridges.

TOTAL EXPENDITURE.

The approved and certified expenditure, up to March 31, 1914, amounted, on the “Prairie Section,” to \$37,859,793.21, and, on the “Mountain Section,” to \$77,362,137.70, making a total of \$115,221,930.91.

QUEBEC BRIDGE.

On August 29, 1907, the cantilever bridge in course of construction over the River St. Lawrence by the Quebec Bridge and Railway Company (originally commenced under a subsidy of \$1,000,000 authorized by the Act of 1899, chapter 7, and a subsidy agreement, dated November 12, 1900), collapsed.

Under the terms of an agreement with the company, dated October 19, 1903, ratified by the Act of 1903, chapter 54, the Government had undertaken to guarantee the principal and interest of the bonds or other securities of the company to the limit of \$6,678,200, the company releasing claim to the balance remaining unpaid of the said subsidy, such guarantee to be secured by mortgage on the company's franchises, tolls and property. On February 1, 1904, a mortgage trust deed was executed, conveying to

5 GEORGE V., A. 1915

the Royal Trust Company (Montreal) as trustees, all the property and franchises of the company, and providing for the issue of bonds accordingly.

It was provided in this agreement that the Government should have the right at any time, on one month's notice, to take over the company's undertaking, assets, property and franchises, on paying the shareholders the amount of their stock at par, not exceeding \$265,585.70, with simple interest at 5 per cent and a premium of 10 per cent on the par value of the paid-up shares.

Of the said subsidy of \$1,000,000, there had been paid to the company a total of \$374,353.33 prior to the execution of above agreement, and, subsequent to its execution, payments were made from the proceeds of their bonds to the extent of \$5,016,453.66 on certificates of the Government engineer covering work done and materials delivered.*

After the collapse of the bridge, the right of the Government to take over the company's undertaking was exercised under the authority of an Order in Council of August 17, 1908. The date of assumption was December 1, 1908. The total of the amounts paid by the Government to the several shareholders for their shares was \$355,279.07, payment being made to the parties concerned in November, 1908. The deed of assignment and transfer from the company to the Government was dated October 18, 1909.

Under authority of an Order in Council of August 17, 1908, a board of three engineers was constituted for preparation of a new design and specification, and for the reconstruction of the bridge, with powers to call in expert engineers as advisers on points of difference that might arise.

In June, 1910, the formal call for tenders was made by newspaper advertisement. In response, 35 different propositions were submitted, which were duly considered by the board, who, finally, after calling in advisory engineers, recommended the acceptance of an alternative design sent in by the St. Lawrence Bridge Company (with whom are associated the Dominion Bridge Company and the Canadian Bridge Company). This design the board considered to possess certain features of strength, simplification of erection, economical distribution of material, and general appearance which, in their opinion, would produce a bridge that "would compare most favourably with the highest type of long-span bridges in existence." By an Order in Council of March 31, 1911, authority was given for entrance into contract with the conjoined companies named, and such contract was executed under date April 4, 1911. The contract price is 9.02 cents a ton, and will aggregate about \$8,650,000, a saving of about \$2,600,000, having been effected by the elimination of the highways for vehicular traffic contemplated in the original design; the contract date for completion is December 31, 1915.

The bridge when constructed will have a total length of 3,228 feet, or about three-fifths of a mile. The centre span will be 1,800 feet long; the length of the

* The history of the Government's connection with the bridge prior to its collapse is given in the Department Annual Report of 1907-8, p. xlvii.

SESSIONAL PAPER No. 20

suspended portion of it will be 640 feet. This span will, for a length of 760 feet over the channel of the river, have a height of 150 feet between its lower members and the high water level of the river. The two cantilever arms will each be 580 feet long. The width of the bridge between trusses will be 88 feet. The bridge will comprise a double-track railway, and two sidewalks for foot passengers.

Under date of January 10, 1910, a contract for the substructure was entered into with Messrs. M. P. and J. T. Davis, whose tender was the lowest of three obtained after newspaper advertisement calling for tenders; and supplementary agreements necessitated by changes in the caisson design and in the location of the north anchor pier, were made with them on May 23, 1910, and September 2, 1911.

The Board of Engineers for reconstruction, as originally constituted, has been modified by retirements and is at present composed as follows:—Charles N. Mon-sarrat, M. Can. Soc. C.E., chairman and chief engineer; Ralph Mojeski, Am. Soc. C.E., and C. C. Schneider, Can. Soc. C.E., and past president Am. Soc. C.E.

The headquarters of the board are in Montreal.

The report of the chairman and chief engineer for the year ended on March 31, 1914, will be found printed in the appendices hereto, Part V.

The report shows that by March 31, 1914, the whole of the substructure had been completed with the exception of some cleaning and painting. The work done comprises 106,090 cubic yards of masonry, all faced with heavy granite blocks with a concrete backing, the main piers having 18 feet of solid granite on the top of each to distribute the loads. The work is stated to be very satisfactory. (It may be noted here that the contract was subsequently completed, and that the final estimate has been made showing that the actual cost has been \$2,376,756.23 or \$71,718.77 less than the engineer's original estimated cost).

As to the superstructure, he states that during the year the contractors, the St. Lawrence Bridge Company, have made steady progress, and that out of an estimated total weight of 65,000 tons of steel required, have manufactured 9,991 tons; that 7,484 tons have been delivered at the bridge site, 1,371 tons erected and partially erected, and 791 tons completely erected. The approach spans from the abutments to the anchor pier have been erected, and the 1,000-ton erection traveller was practically completed.

Some interesting photographs of the works will be found at the end of the departmental report.

The expenditure during the past fiscal year up to March 31, 1914, was \$2,604,105.61, paid out of capital, and making the total capital expenditure \$4,947,788.04, adding to which the expenditure from income, namely, for the year 1908-9, \$422,867.12 (in which is included the amount \$355,279.07 paid for acquiring the stock of the Quebec Bridge and Railway Company, and \$31,765.44, the expenses of the commission of inquiry into the causes of the collapse of the old structure), and for the year 1909-10, \$111,782.02 for the preparation of plans, etc., or a total of \$534,655.14, against which there is to be credited the sum of \$100,000 paid in 1910 to the Government by the

Phoenix Bridge Company, the contractors for the original superstructure, in the final adjustment of claims arising out of the collapse, the total net cost to the Government up to March 31, 1914, is \$5,382,443.18. This is irrespective of the amount of subsidy, \$374,353.33 paid to the Quebec Bridge Company as above mentioned.

SUBSIDIZED RAILWAYS.

Information as to subsidized railways is given in the statements of the accountant and the law clerk of the department, respectively, which will be found in the appendices hereto. The accountant's statements show all payments made, year by year, since the beginning of the system of railway subsidies; the law clerk's statement shows the several subsidy agreements entered into during the past year, with certain details of the specification in each case.

The total payments made on subsidy account during the year ended March 31, 1914, amounted to \$19,036,236.77.

BOARD OF RAILWAY COMMISSIONERS FOR CANADA.

By the Act 3 Edward VII, chap. 58 (1903), amending and consolidating the law respecting railways, the Railway Committee of the Privy Council was abolished, and in lieu thereof a Board of Commissioners, under the above title, was created, to consist of three members (increased to six by the Act of 1908, chap. 62), to be appointed by the Governor in Council; this Act was brought into force on February 1, 1904, by proclamation, on the authority of an Order in Council, dated January 18, 1904, which also appointed certain persons as commissioners. By the Act of 1908, chap. 61, the jurisdiction of the board was extended to cover the operation of telegraph and telephone lines, and by the Act of 1908, chap. 62, certain amendments were made to its constitution and otherwise. By the Act of 1909, chap. 31, the board was empowered to determine the maximum price to be charged for electricity developed through water-powers leased from the Crown. An Act of 1910, chap. 50, amended certain provisions of the Railway Act regarding the powers of the board, and the Act of the same year, chap. 57, extended the jurisdiction of the board to cover the fixing by it of the tariffs of wireless telegraph and marine electric telegraphs or cables. The Act of 1911, chap. 22, gave powers to the board to require from railway companies the establishment of a staff of fire-rangers, modified the previous enactments regarding the disposal of electricity developed through Government leased water-powers, and amongst other enactments, made provision for action, through the board, to ensure the efficient operation of subsidized railways. The office of the board is at Ottawa, though it is authorized to hold sessions in any part of Canada. Its decisions and orders are final, subject to appeal to the Supreme Court upon questions of jurisdiction or law, and also to action thereon by the Governor in Council, in his discretion.

It is required to make, annually, a report of its proceedings, which report is laid before Parliament. The report for the year ended March 31, 1914, has been received, and will be laid before Parliament in due course.

SESSIONAL PAPER No. 20

CANALS.

The total expenditure on the Dominion canals for the twelve months ended March 31, 1914, was \$4,583,558.85, comprising \$2,829,661.34 charged to capital; \$389,284.75 charged to income; \$745,220.81 for staff; and \$619,391.95 for repairs; the last two items being charged to revenue.

The balance of rentals due on April 1, 1913, was \$158,390.59. The rentals accrued during the year amounted to \$253,018.49, making a total of \$411,409.08. Of this amount, there was collected during the year a total, after deducting abatements aggregating \$16,371.09, of \$259,277.01. The balance remaining due on March 31, 1914, was \$135,760.98. It should be observed that, as a general rule, rentals are payable in advance, this fact accounting, to a considerable extent, for the large amount of rental due at the end of each year.

The total revenue collected amounted to \$380,188.06, the balance being made up of wharfage dues, fines, etc., and a total of \$62,875.61 derived from the operation of the Port Colborne grain elevator on the Welland canal.

No tolls are charged on any of the Dominion canals since 1903-4.

Summaries of these expenditures and receipts will be found in the statements furnished by the Accountant of the Department, printed in the appendices, Part I, of the present report.

The above figures relate to the fiscal year 1913-14, but very voluminous statistics relating to canal traffic, and various commercial statistics for the season of navigation of the year 1913, will be found in the "Canal Statistics," which are issued as a separate report.

The principal facts of these statistics, summarized, are as follows:—

The total traffic through the several canals of the Dominion for the season of 1913, amounted to 52,053,913 tons, an increase of 4,595,292 tons compared with the previous year. 335,799 passengers were carried, an increase of 43,532.

The following features of the principal canal traffic during the season of 1913 will be of interest:—

On the Welland canal, 3,570,714 tons of freight were moved, an increase of 718,799 tons. Of the total, 1,684,967 tons were agricultural products, and 337,927 tons were produce of the forest; of coal, 945,790 tons were carried; 3,484,651 tons were through freight, of which 2,553,542 tons passed eastward.

Of the through freight, Canadian vessels carried 2,511,211 tons, an increase of 621,983 tons, and United States vessels 973,440 tons, an increase of 75,981 tons.

The total through freight passed eastward and westward through this canal to United States ports was 525,333 tons, an increase of 109,577 tons, compared with the year 1912.

The quantity of grain passed down the Welland and St. Lawrence canals to Montreal was 1,265,368 tons, an increase of 303,513 tons, as compared with the previous year; no transshipments have been made at Ogdensburg since 1903.

On the St. Lawrence canals, 4,302,427 tons were moved, an increase of 825,239 tons, of which 2,815,410 tons were eastbound through freight, and 671,472 tons westbound freight; 1,545,755 tons were agricultural products, 1,429,509 tons coal, and 660,226 tons forest products.

On the Ottawa River canals, the total quantity of freight moved was 365,438 tons, a decrease of 26,912 tons, of which 186,710 tons were produce of the forest.

On the Chambly canal, 555,602 tons were moved, a decrease of 62,813 tons, of which 337,331 tons were produce of the forest, and 120,035 tons of coal.

On the Rideau canal, 171,223 tons were carried, an increase of 11,090 tons; 27,331 tons being produce of the forest, and 14,784 tons of coal.

On the St. Peter's canal, 71,514 tons were carried, a decrease of 3,295 tons; 36,808 tons were coal.

On the Murray canal, 180,576 tons passed, an increase of 10,495 tons.

On the Trent canal, 55,800 tons were moved, a decrease of 21,350 tons, of which 50,812 tons were produce of the forest.

On the St. Andrew's lock, on the Red river, Manitoba, the volume of business was 81,295 tons.*

On the Sault Ste. Marie canal, the total movement of freight was 42,699,324 tons, being an increase of 2,999,669 tons. There were 8,285 passages of vessels, the number of lockages being 6,266. Of wheat, 131,827,467 bushels, and of other grain, 50,875,233 bushels were carried; 2,240,840 barrels of flour; 32,419,242 tons of iron ore; 4,153,351 tons of coal; and 25,261,000 feet board measure, lumber.

The report of the Chief Engineer of the department, and the reports of the officers under his immediate control, which will be found in Part VI of the appendices, give comprehensive information as to the several works under his charge, the principal of which are the Hudson Bay railway, the Trent canal, the new Welland Ship canal, and the terminals of the Intercolonial railway near Halifax.

RAILWAY STATISTICS.

The digest of the sworn statements of railway companies relating to their operations in Canada for the twelve months ended June 30, 1914, is prepared by the Departmental Comptroller of Statistics, and is issued as a separate report.

* T is work, which consists of a lock and dam on the Red river, about 15 miles north of Winnipeg, was built and is operated by the Department of Public Works. It affords communication between Winnipeg and lake Winnipeg. It is only mentioned here for statistical purposes.

SESSIONAL PAPER No. 20

CANAL STATISTICS.

The traffic statistics of the Dominion canals for the season of navigation of 1913 are compiled under the direction of the same officer, and are also issued as a separate report.

I have the honour to be, sir,

Your obedient servant,

A. W. CAMPBELL,
Deputy Minister.

STATEMENTS

OF THE

ACCOUNTANT OF THE DEPARTMENT

SHOWING.

EXPENDITURE ON RAILWAYS AND CANALS

(Including Subsidized Railways)

AND RECEIPTS

FOR THE YEAR 1913-14

AND PREVIOUS YEARS

INDEX.

To the Statements of the Accountant showing the Expenditure and Revenue of the Department of Railways and Canals.

	PAGE
I. General statement of the expenditure on Railways and Canals, including Quebec bridge and railway subsidies, during the fiscal year ending March 31, 1914..	35
II. Statement showing the revenue received from the railways and the canals during the fiscal year ending March 31, 1914..	36
III. Statement showing the expenditure of the canals during the fiscal year ending March 31, 1914..	37
IV. Statement showing the expenditure of the railways during the fiscal year ending March 31, 1914..	38

CANALS.

V. Statement showing the expenditure to March 31, 1914, on each of the canals as follows:—	
Baie Verte canal..	39
Beauharnois canal..	40
Carillon and Grenville canal..	41
Chambly canal..	42
Cornwall canal..	43
Culbute Lock and dam..	44
Lachine canal..	45
Lake St. Francis..	46
Lake St. Louis..	46
Murray canal..	47
Ottawa River Works..	48
Rideau canal..	49
Sault Ste. Marie canal..	50
Soulanges canal..	51
Ste. Anne's Lock and canal..	52
St. Lawrence river and canals..	53
St. Ours lock..	54
St. Peters canal..	55
Tay canal..	56
Trent canal..	57
Welland canal..	58
Welland Ship canal..	59
Williamsburg canal, including Farran's Point, Galops, and Rapide Plat canals..	60 and 61
VI. Statement showing the expenditure on construction and enlargement of canals to March 31, 1914..	62
VII. Statement showing the expenditure and the revenue of the canals yearly to 1914..	63
VIII. Statement showing the miscellaneous canals expenditure..	64
IX. Cana's revenue statement for fiscal year ending March 31, 1914, by collection divisions..	65
X. Statement of the hydraulic and other rents by canals..	66
XI. Statement of the expenditure on canals classified as to "Capital," "Income," "Staff" and Repairs..	67
RAILWAYS.	
XII. Statement of the expenditure on the following railways:—	
Annapolis and Digby Railway..	68
Canada Eastern Railway..	69
Canadian Pacific Railway..	70
Cape Breton Railway..	71
Carleton Branch Railway..	71

RAILWAYS.—Continued.

“ General Solicitor, Government Railways.

Statement of Casualties, Intercolonial Railway.

“ “ Prince Edward Island Railway.

Report of Comptroller and Treasurer, Intercolonial Railway.

“ “ “ Windsor Branch.

“ “ “ Prince Edward Island Railway.

“ “ “ National Transcontinental Railway operation.

“ Chairman and Secretary of Government Railways Provident Fund Board.

OFFICE OF GENERAL MANAGER OF GOVERNMENT RAILWAYS.
MONCTON, N.B., September 21, 1914.

SIR,—The undersigned has the honour to submit the following report on the working of the Canadian Government Railways during the fiscal year ending March 31, 1914.

The last official report on the working of Government Railways for the fiscal year ending March 31, 1913, was made under date of September 12, 1913, by the Government Railways Managing Board, which form of management was abolished on May 1, 1913; the management then being transferred to the General Manager of Government Railways.

The Government Railways, for the fiscal year ending March 31, 1914, consisted of the Intercolonial Railway, the Prince Edward Island Railway, and the Windsor Branch Railway.

Following the abolition of the Government Railways Managing Board and the transfer of the management to the General Manager of Government Railways certain changes were effected in several of the heads of the departments of the railway service, namely:—

The office of the Superintendent of Motive Power was superseded by the offices of the Superintendent of Rolling Stock and of Master Car Builder.

In connection with the engineering work the office of Chief Engineer of Government Railways was established and took over, together with the work of construction, the work theretofore under the Engineer of Maintenance, which latter position was abolished; a Division Engineer was appointed with head office at Moncton, reporting to the Chief Engineer on all engineering questions, and to the General Superintendent on all other matters pertaining to operation. Resident Engineers were appointed at various points on the railway, namely: Levis, Campbellton, Truro and New Glasgow; these officers were placed under the immediate supervision and direction of the Division Engineer in respect of engineering matters, and the Superintendents in respect of maintenance and operation matters. Bridge and Construction Engineers were appointed with direct supervision under the Chief Engineer, of the works appertaining to their respective offices.

The office of General Solicitor and General Claims Agent was established and the legal and general claims work of the railway theretofore conducted in part from the legal office of the Department of Railways and Canals at Ottawa, and in part from the head office of the railways at Moncton, was placed in the whole under the office so established.

Separate accounts were, during the said fiscal year, kept for each railway and these accounts will be considered separately in this report.

INTERCOLONIAL RAILWAY.

The following reports of the officials are enclosed:

Report of the Chief Engineer on works chargeable to Capital and Revenue Accounts.

Report of the Superintendent of Rolling Stock, statements relating to the Mechanical Department.

Report of the General Solicitor, (January 1 to March 31, 1914).

Report of General Superintendent, statement of casualties.

INTERCOLONIAL RAILWAY.—*Continued.*

The report of the Comptroller and Treasurer, as follows:—

1. Capital Account.
2. Revenue Account.
3. Maintenance of Way and Structures.
4. Maintenance of Equipment.
5. Traffic Expenses.
6. Transportation Expenses.
7. General Expenses.
8. General Store Account.
9. General Balance.
10. Statement of Receipt of Expenses.
11. Equipment Renewal Account.
12. Rail Renewal Account.
13. Fire Renewal Account.
14. Statement of Cash Received.
15. Statement of Averages.
16. Statement of Articles carried by the Railway.
17. Statement of Freight and Passenger Receipts.

The length of railway in operation during the year 1913-14 was 1457.77 miles, a shortening, on account of the track diversion, of the mileage in operation for the previous year.

CAPITAL ACCOUNT.

The cost of the road and equipment on March 31, 1913 was \$97,137,807.17. The additions during the year were as follows:—

To Strengthen bridges.	\$	134,582	34
“ Increase accommodation, machinery, Halifax. . .		107,485	41
“ Locomotive and car shops with equipment, Moncton		132,170	25
“ Sydney Mines diversion.		17,306	93
“ Diversion of line and branch at wharf, Chatham..		45,271	77
“ Increase accommodation, Truro.		91,008	50
“ Surveys and inspection.		40,000	00
“ Increase accommodation, Ste. Flavie.		10,923	83
“ Improvements Pt. Tupper.		69,842	64
“ Increase accommodation, Fredericton.		19,990	68
“ Improvements, Sussex.		30,454	48
“ Spur line to Wallace harbour.		168	61
“ Increase accommodation, Mulgrave.		14,201	95
“ Rolling stock.		993,380	18
“ Improve tripple valves of air brakes.		7,150	00
“ General protection of highways.		33,532	52
“ Diversion of line between Nelson and Derby junction.		22,055	21
“ Increase accommodation and facilities along the line.		128,203	83
“ Increase water supply.		23,851	32
“ Spur line to Courtenay bay, St. John.		1,257	35
“ New terminal facilities, Halifax.	1,033,834	40	
“ Spur line, Pugwash.		58,000	00
“ Double tracking Chaudiere Curve to St. Romuald		43,098	75
“ New station, Bathurst.		9,611	61

	Total.	\$101,469,807 05

Less—

By additional sidings and spur line—		
Previous year's expenditure.	\$ 305 20	
Previous year's expenditure.	2,000 00	2,305 20

Making the total cost on March 31, 1914. \$101,467,501 85

Explanations in regard to the expenditure on Capital Account will be found in the reports of the Chief Engineer and the Superintendent of Rolling Stock.

The gross earnings and the working expenses for the year compare as follows:—

Gross earnings.	\$ 12,878,549
Working expenses.	12,867,249
Net earnings.	\$ 11,300

There was a gain of \$190,662.78 from the operation of the railway for the year. Of this surplus \$179,362.78 was transferred in March to Equipment Renewal Account so that when the books were closed at the end of the year they showed net earnings \$11,300.

The gross earnings compare as follows with those of the previous year:—

In 1913-14.	\$ 12,878,549 00
In 1912-13.	11,984,482 69
Increase.	\$ 894,066 31

INTERCOLONIAL RAILWAY.—*Continued.*CAPITAL ACCOUNT. *Continued.*

The earnings from passenger traffic compare as follows:—

In 1913-14..	\$ 3,674,878 75
In 1912-13..	3,483,447 32
Increase..	\$ 191,431 43

The earnings from freight traffic compare as follows:—

In 1913-14..	\$ 8,469,590 33
In 1912-13..	8,028,760 13
Increase..	\$ 440,830 20

The earnings from mails, express freight and miscellaneous compare as follows:—

In 1913-14..	\$ 734,079 92
In 1912-13..	517,275 24
Increase..	\$ 216,804 68

The earnings by mile of railway compare as follows:—

In 1913-14..	\$ 8,839 27
In 1912-13..	8,162 98
Increase..	\$ 676 29

The earnings by train mile compare as follows:—

In 1913-14..	\$ 1 54
In 1912-13..	1 47

The numbers of passengers carried compare as follows:—

In 1913-14..	3,983,511
In 1912-13..	3,763,115
Increase..	220,396

There was an increase of 189,071 in the number of local passenger and of 31,325 in the number of through passengers.

The weight of revenue producing freight compares as follows:—

	Tons.
In 1913-14..	5,287,740
In 1912-13..	5,203,469
Increase..	84,271

There was a decrease in local freight of 129,795 tons and an increase in through freight of 214,066 tons.

SESSIONAL PAPER No. 20

A number of statements which give detailed information in regard to the traffic are appended to this report. They are as follows:—

Statement of receipts, showing the receipts monthly from passenger traffic, freight traffic, and mails and sundries.

Passenger statement, showing monthly the number of local and of through passengers carried and the mileage.

Freight statement, showing monthly the number of tons of local and through freight carried and the mileage.

Comparative statement, showing the principal articles of freight carried during this year and the preceding year.

Descriptive statement of freight transported, showing a few of the principal articles.

Statement of coal transported, showing the stations from which it was sent.

Statement showing the quantity of raw and of refined sugar, of fresh and salted fish, of grain for export, and of European freight carried over the railway.

Statements of ocean-borne freight traffic at Halifax and at St. John, showing the quantity of freight imported and exported.

WORKING EXPENSES.

The working expenses compare as follows with the previous year:—

In 1913-14..	\$12,867,249 00
In 1912-13..	11,984,482 69
Increase..	\$ 882,766 31

The averages compare with those of last year as follows:—

Per mile run by engines—

In 1913-14..	1.25
In 1912-13..	1.16

Per mile run by trains—

In 1913-14..	1.54
In 1912-13..	1.47

Working expenses per mile of railway—

In 1913-14..	\$8,831 51
In 1912-13..	8,159 91

During the year, ending March 31, 1914, 685,418 ordinary ties were put in the track, and 216 miles ballasted and a total of fourteen miles of ditching completed in cuttings, to provide for better drainage for the road-bed. 12.497 miles of additional sidings provided at various points. Bridges, culverts, wharves, fences and buildings repaired and 40.72 miles of standard woven wire fence and 2.17 miles of snow fences erected.

The Superintendent of Rolling Stock reports rolling stock purchased, rebuilt in shops, etc.

As there were no accurate records of the physical characteristics of the railway, a resurvey to obtain these records was started, and the result of these surveys to March 31, 1914, is to be found in the report of the Chief Engineer. A large number of bridges on the railway reported for repairs, were repaired and a number reported for replacement were replaced by new ones. A statement of the bridges repaired and replaced is also to be found in the report of the Chief Engineer.

Signals.

It was found necessary to the proper despatch and efficiency in the operation of trains to install automatic block signals. Approximately 10 per cent of this work was completed within the year in installation between the following points:—

- Halifax and Windsor Junction, 14 miles double track.
- Painsce Junction and Moncton, 7 miles double track.
- Hampton and St. John, 20 miles double track.

The installation of telephone train despatching system between St. John and Halifax was commenced, and about 90 per cent was completed on March 31, 1914.

Electric crossing bells have been installed at thirty-eight crossings along the line of the railway.

New Lines.

A contract has been let for a diversion of the line from Nelson on the Loggieville subdivision, to the southwest Miramichi bridge on the Moncton subdivision, 2.69 miles in length, to replace existing lines 5.55 miles.

A contract has also been let for a line from Leitches creek on the Sydney subdivision to North Sydney, about 4.3 miles in length, and on March 31, 1914, approximately 3 per cent of the work completed.

Extensive improvements and additions in railway harbour facilities at Halifax have been undertaken and information of the extent of the work carried on to the end of the year is to be found in the Chief Engineer's report.

Stores.

The value of general stores carried over from previous year was.	\$1,465,157 78
The value of stores purchased and charged from other departments was.	5,997,858 05
Total.	<u>\$7,463,015 83</u>
The value of stores used and sold.	5,283,133 75
Balance of general stores on hand March 31, 1914..	<u>\$2,179,882 08</u>

Windsor Branch Railway.

The line extends from Windsor Junction to Windsor, N.S., and is 32 miles in length. It is operated by the Dominion Atlantic Railway Company, and is maintained by the Government, and the company pays the Government one-third of the gross earnings.

The following statement of the accounts prepared by the Comptroller is enclosed:—

No. 1.—Revenue account.

No. 2.—Maintenance of way and structures.

No. 3.—General balance.

No. 4.—Statement of earnings.

The revenue ($\frac{1}{3}$ earnings) was.	\$61,517 52
The cost of maintenance was.	26,486 98

Net earnings. \$35,030 54

The earnings decreased, and compare with those of the previous year as follows:—

Earnings, 1913-14.	\$61,517 52
Earnings, 1912-13.	68,246 70

Decrease.\$6,729 18

There was an increase in passenger traffic, while the mail earnings remained stationary. There was a decrease in freight traffic.

SESSIONAL PAPER No. 20

PRINCE EDWARD ISLAND RAILWAY.

The length of railway in operation at the end of the year 1913-14 was 275.2 miles. The gauge is 3 feet 6 inches.

The cost of road and equipment on March 31, 1913,	
was	\$8,790,794 06
The expenditure during the year 1913-14 was	129,574 95
	<hr/>
Making a total cost on March 31, 1914	\$8,920,369 01
Gross earnings	\$409,616 74
Working expenses	571,415 37
	<hr/>
Deficiency	\$161,798 63

The gross earnings compare with previous year as follows:—

1913-14	\$409,616 74
1912-13	389,474 07
	<hr/>
Increase	\$ 20,142 67

The increase was in both passenger and freight traffic.

The working expenses compare with previous year as follows:—

1913-14	\$571,415 37
1912-13	489,972 34
	<hr/>
Increase	\$ 81,443 03

The necessary work was done to maintain the railway in a state of efficiency including the replacing of rails with heavier weights for a distance of over one mile, renewing of track and switch ties, and the ballasting of several miles of track.

5 GEORGE V., A. 1915

INTERCOLONIAL AND PRINCE EDWARD ISLAND RAILWAYS
EMPLOYEES' PROVIDENT FUND.

The report of the fund which has been separately furnished shows a credit balance on March 31, 1913.		\$ 346,028 57
During the fiscal year the contributions of the employees amounted to.		99,805 03
The contributions of the railway amounted to.		99,805 03
Amount received for refund.		1,236 00
Total of.		\$546,874 63
Total expenditure was.		167,701 19
Leaving a balance of.		\$379,173 44
To which is to be added the interest		10,048 32
Making a total amount to the credit of the fund on March 31, 1914.		\$389,221 76

During the year one hundred and eight employees were retired and placed upon the fund, thirty-seven have died, leaving four hundred and eighty-five persons on the list receiving an allowance from the fund at the end of the fiscal year. This is an increase of seventy-one persons compared with last year.

I have the honour to be, sir,
Your obedient servant,

F. P. GUTELIUS,
General Manager of Government Railways

INTERCOLONIAL RAILWAY.

Total for Intercolonial Railway..	1,456.97	26.09	132.62	353.31

RAILS.

The main line has been relaid with new 80 lb. and 85 lb. rail on the several districts, as follows:—

	Track Miles.
District No. 1—Relaid with new 80 lb. rail.....	9.63 miles.
Relaid with new 85 lb. rail.....	2.75 miles.
District No. 2—Relaid with new 80 lb. rail.....	27.33 miles.
District No. 3—Relaid with new 80 lb. rail.....	9.31 miles.
District No. 4—Relaid with new 80 lb. rail.....	18.01 miles.
Total track miles of new rail laid.....	67.03 miles.

With the good relay rail released in laying the above, the main track was relaid at various mileages, and all piped, excessively battered or otherwise defective rails removed from the track.

The mileage of the various weights of rails in the main tracks of through main line and branches is as follows:—

Weight of rail	56 lb.	67 lb.	70 lb.	80 lb.	85 lb.
District No. 1—Miles.....		19.41	16.37	328.11	2.75
District No. 2—Miles.....	26.0	109.75		288.97	
District No. 3—Miles.....	4.0	53.88		303.14	
District No. 4—Miles.....	19.71	87.29		231.44	
Totals.....	49.71	270.33	16.37	1,151.66	2.75

New 85 lb. rail purchased and allotted in 1913 has been distributed for laying, as follows:—

District No. 1.....	27.99 track miles.
District No. 2.....	24.00 "
District No. 3.....	16.27 "
District No. 4.....	12.89 "
Total.....	81.15 "

The laying in of this new rail will be proceeded with as soon as the season is sufficiently advanced.

Worn out 56 lb. rail has been replaced with heavier weight rail in 7.17 track miles of sidings.

SESSIONAL PAPER No. 20

RAIL YARD.

A new rail yard has been established at Moncton and 2,465 lineal feet of siding track laid for the loading and unloading of second hand rail. In this yard will be stored all second hand rail of various weights classified according to the service they are fit for, and from this point will be shipped all second hand rail required for the various works. There is at present stored in this yard the following rail:—

Size of Rail.	Main Line —Tons.	Branch Line —Tons.	Siding —Tons.	Scrap over 4 ft. —Tons.
80 lb.....		7.5	1,418.9	278.5
70 lb.....			17.3	
67 lb.....			227.3	44.0
58 lb.....			382.2	
56 lb.....			514.7	106.0
Total.....		7.5	2,560.4	428.5

In addition to the above there is at present stored in this yard 250.9 tons of new 85 lb. rails, to be used in the manufacture of frogs and switches and as emergency stock.

The balance of the second hand rail at present scattered over the railway will be picked up, classified and stored here during the coming year.

This system will permit of obtaining the utmost value from all rails released from the main line. Rails which are good for branch lines will be allotted for that service and will not be laid in side tracks, but used to change out light weight rails on these branch lines when necessary. Sidings will not be indiscriminately relaid with heavy weight rails; but when the condition of the light rails warrants it, allotment of heavy siding rail will be made for this purpose. The concentration of second hand rails will permit of an accurate record being kept of all rails in stock.

TIE RENEWALS.

Track ties have been renewed during the year, as follows:—

	Main Line.	Average per Mile.	Sidings and Spurs.	Average per mile.
District No. 1—No. of ties renewed.....	124,419	345	12,546	116
District No. 2—No. of ties renewed.....	211,041	496	16,582	234
District No. 3—No. of ties renewed.....	183,518	508	25,998	135
District No. 4—No. of ties renewed.....	166,440	492	23,666	290
	685,418		78,792	

BALLASTING.

Ballasting of roadbed has been completed over the following mileage:—

District No. 1.....	80.75 miles.
District No. 2.....	67.29 miles.
District No. 3.....	50.69 miles.
District No. 4.....	18.00 miles.
Total.....	216.75 miles.

And a total of 14.38 miles of ditching has been completed in cuttings so as to provide better drainage for roadbed.

TILE UNDERDRAINING IN WET CUTTINGS.

Moncton sub-division, 8,000 lin. feet 6-inch tile pipe laid.
 Truro sub-division, 500 lin. feet, 6-inch and 4-inch tile pipe laid.
 Stellarton sub-division, 4,650 lin. feet, 6-inch tile pipe laid.
 Pictou branch sub-division, 300 lin. feet, 6-inch tile pipe laid.

PROTECTION OF EMBANKMENTS AND CUTTINGS.

It has been found necessary to protect embankments at various points from scour by waves where adjacent to large bodies of water, or where exposed to the action of the spring freshet. Also in cuttings through wet clay or material readily effected by moisture crib walls have been erected to arrest slides. Such protection works have been carried out as follows:—

District No. 2.

Chatham.—363 cubic yards of heavy stone riprap on face of embankment at Walsh's Cove.
 Quarryville.—New crib work 600 feet long in wet cutting.
 Blackville.—300 lin. feet of old crib work renewed.
 West of Matapedia.—500 lin. feet of crib work built to protect embankment along river bank.

District No. 3.

Two hundred and seventy-five lineal feet of crib protection and 100 lin. feet of heavy riprap have been built to protect embankments from scour.

District No. 4.

On the Sydney sub-division 1,025 lineal feet of crib protection has been erected to save embankments from sea wash; and between mileage 46 and 47, 300 lineal feet of crib wall has been built in cuttings to arrest sliding of material.

ROCK CUTTINGS.

On the Campbellton sub-division all loose and dangerous stones have been removed from rock cuttings; and on the Sydney sub-division between mileages 42 and 44, and on the Mulgrave sub-division between mileages 7 and 9 similar work has been undertaken.

NEW TRACKS.

DOUBLE TRACK CONSTRUCTION.

On District No. 1 between St. Romuald and Chaudiere Curve a distance of 3.75 miles, contract has been awarded for the construction of a second main track. Work was started in October 1913, and to date about 80 per cent of the excavation has been taken out, and the entire work is 45 per cent completed.

SESSIONAL PAPER No. 20

MEETING SIDINGS.

New meeting sidings or extensions of meeting sidings have been constructed at the following points:—

	Lin. Ft.
<i>District No. 1.</i>	
Ste. Rosalie Jet., extension..	1,104
<i>District No. 2.</i>

PUGWASH BRANCH.

A spur line 6,050 feet long across Pugwash harbour to give a rail connection to the plant of the Nova Scotia Clay Works, and other industries, was started during the year and the grading is completed sufficiently to allow track to be laid throughout. Twelve thousand feet of track has been laid. A pile bridge 392 feet long has been built across the harbour, and all fencing and culverts completed. There is a D. G. swing span to be built on piles and concrete and the remainder of track laid and lifted and ballasted to a proper grade line.

CHANGES IN MAIN LINE.

District No. 2.

At a distance of about $2\frac{1}{4}$ miles from Moncton, a connection has been made between the Intercolonial and the line of the National Transcontinental Railway which permits traffic to leave Moncton over the N. T. R. low grade line avoiding the heavy one per cent gradient in the I. C. R. main line, and so doing away with assisting trains out of this yard.

WATER SERVICE.

District No. 1.

All tank spouts which, when not in use, projected over the track and so did not give proper clearance, have been changed to stand in a vertical position against tanks.

Ste. Helene.—Temporary pump installed on account of lack of water available from gravity supply.

St. Charles Junction.—Pump and coal shed extended 12 ft and new standard tank boiler installed.

Bagot.—New Standard Tank boiler installed.

District No. 2.

Matapedia.—Survey made and contract awarded for gravity water supply, which includes the construction of a dam and new 8-inch cast-iron pipe line 5,273 feet long. Pipe line laid and concrete dam 90 per cent completed.

Assametquaghan.—Survey made and contract awarded for new gravity water supply. Work had to be postponed on account of severity of the weather at time contract was let.

Campbellton.—In order to increase the present gravity water supply contract was awarded for the laying of 6,850 lineal feet of 8-inch cast-iron pipe, but work was postponed on account of the severity of the weather at time contract was let.

Red Pine.—Pump house destroyed by fire and replaced with standard structure.

District No. 3.

Halifax.—New hydrant put in at pier No. 2 for fire protection.

Westchester.—Laid 125 feet of $1\frac{1}{4}$ -inch galvanized pipe from private well to station and installing pump in station dwelling. Supply for domestic purposes.

Thompson.—Relaid old 3-inch W.I. pipe line 4,570 feet long with 6-inch wire wound wooden pipe. Gravity supply.

Dorchester.—Drilled new 6-inch well 185 feet deep and installed hand pump. Station supply.

Petitcodiac.—Raised tank 2 feet and set same on concrete blocks.

Norton.—Renewed top of reservoir. Station supply.

Bloomfield.—Well deepened to 16 feet and cased with 30-inch concrete pipe. Station supply.

Brockville.—New well dug 15 feet and cased with 30-inch concrete pipe. Station supply.

SESSIONAL PAPER No. 20

Coldbrook.—Station supply 275 feet of $\frac{3}{4}$ -inch galvanized pipe laid connecting with Maritime Automobile Company's supply.

Hilden.—Station well 10 feet deep cased with 18-inch concrete pipe. Station supply.

District No. 4.

Boisdale.—New 40,000 gallon open wood tank built replacing 40,000 gallon wood tank.

West Bay Road.—New frame pump house with coal house built replacing frame pump house destroyed by fire. See 'Damage by Fire' also.

Mulgrave.—Water meter installed in concrete box to measure water sold to ships.

Avondale.—Well bored for station use.

Wallace Bridge.—Well bored for station use.

Monastery.—Well dug for station use.

In addition to the above, necessary repairs were made to water stations and water service equipment on the railway.

BUILDINGS.

New buildings, platforms, etc., or alterations or additions to existing buildings were constructed during the year as follows:—

*District No. 1.**Ste. Flavie Subdivision:*

Ste. Flavie.—New brick and stone passenger station completed and 870 feet of station concrete platform built. The freight shed was extended 100 feet, and the ice house was extended 63 feet 6 inches. Seven smoke jacks were renewed in the engine house.

St. Fabien.—300 feet new station platform built.

Rimouski.—Freight shed extended fifty feet (50').

Rivière du Loup Subdivision:

Rivière du Loup.—Bunk house and sand house built. Eleven smoke jacks were renewed in the engine house.

Dessaint.—Station platform extended 36 feet.

Montmagny.—Freight shed extended 100 feet, also a 100 foot extension made to the station platform.

St. Francois.—Freight shed extended 40 feet, also 40 foot extension made to station platform.

Chaudière Junction.—Ice house built. Twelve smoke jacks were renewed in the engine house.

Lévis Subdivision:

Lévis.—Cattle pen shed constructed, and a bond room 20 feet by 36 feet in freight shed. The changes necessary to accommodate the district offices in the station building were made.

Chaudière Subdivision—

Villeroi.—Freight shed extended 30 feet, also 30 feet extension made to platform.

St. Leonard Junction.—Station platform renewed.

Drummondville.—One hundred ton mechanical coaling plant built.

Ste. Rosalie Junction.—Coal and oil shed built.

*District No. 2—**Moncton Subdivision—*

Moncton.—An extension was made to the freight car repair shop in steel and concrete, under contract, with an insulated wood roof and separate heating system. The extension was carried northwardly from the original building to the end of the planing mill, a distance of 404 feet, and westwardly in line with the western side of planing mill doubling the capacity of this shop. Alterations were made in the power house and a 400 H.P. Bettington boiler installed.

Collet's.—Cinder platform built.

Section No. 55.—Tool house built.

Red Pine.—Pump house built.

Bathurst.—New brick station and concrete platform built.

Jacquet River.—New cattle pen built.

Section No. 66.—Tool house built.

Section No. 67.—Tool house built.

New Mills.—Station platform built.

Charlo.—Station platform renewed.

Eel River.—Station platform built.

Campbellton Subdivision—

Campbellton.—Ice house built, and yard office extended and rearranged for car checkers

Causapsal.—Freight shed extended 25 feet.

Loggieville Subdivision—

Nelson.—Loading platform built.

Fredericton Subdivision—

Fredericton.—Contract was let for freight shed on concrete foundation and concrete platform. Shed 30 feet by 304 feet, with office accommodation and warm room. Loading platform and team tracks were built. Six thousand six hundred and five feet of track laid.

*District No. 3.**Halifax Subdivision—*

Halifax.—Shed built on pier No. 6.

Fall River.—Tool house built, and platform extended 120 feet with cinders.

Wellington.—Tool house built.

Dewis.—Station platform extended 90 feet.

Grahams.—New station built and platform extended.

Truro Subdivision—

Truro.—Stone passenger station, which provides accommodation for district offices and restaurant completed, and concrete platform; also "tarvia" pavement on esplanade back of station from south end of the station eastward. New cattle pen built. New icehouse built.

Folleigh.—Ice house built.

Oxford Junction.—New basement under part of station and hot water heating system installed.

Dorchester.—Station platform extended.

College Bridge.—New station built, and freight shed moved to new location.

SESSIONAL PAPER No. 20

St. John Subdivision—

Moncton.—Verandah built on general manager's house. New pay office built in conductor's waiting room and restaurant in station remodelled.

Boundary Creek.—Freight shed extended 22 feet.

Sussex.—Contract was let for a brick and stone passenger station and baggage room, which are about 89 per cent completed.

Jubilee.—Freight shed extended 16 feet.

St. John.—The end wall of train shed removed and replaced with wood posts; also ticket office and newsroom remodelled.

Point du Chêne Subdivision—

Shediac.—Drain 522 feet long laid from station cellar to sewer with 6-inch vitrified pipe.

*District No. 4.**Sydney Subdivision—*

Point Tupper.—Section tool house built. Carpenter shop built. Sand house built. Fourteen pocket, air hoist coaling plant erected. Double dwelling built. Brick and stone passenger station with hot water heating completed; also concrete platform built, 100 feet concrete ash pit built.

Cleveland.—Standard shelter station built.

Mile 10.61.—Loading platform built.

Mile 68.55.—Loading platform built.

Mulgrave Subdivision—

Hopewell.—Section tool house built.

Stellarton.—Concrete drop pit in car shop built. Mechanical stores building was remodelled.

Merigomish.—Section tool house built.

Marshy Hope.—Section tool house built.

Pirate Harbour.—New concrete ash pit built, required on account of yard re-arrangement.

Mulgrave.—Ice house built. Six sheet iron houses covering machinery on top of hoisting towers of transfer platform built to replace six wooden houses.

North Sydney Subdivision—

Watson's Cove.—New shelter built.

Little Bras d'Or.—New station and dwelling built.

Florence.—New station and dwelling built.

Stellarton Subdivision—

Loch Broom.—New shelter built.

Westville.—New section tool house built. Extension to freight shed.

Pictou Subdivision—

Pictou.—Extension to ice house fifty feet. New concrete ash pit 30 feet long. Mechanical stores building was remodelled.

5 GEORGE V., A. 1915

FENCING (NEW AND REPAIRS).

40.72 miles of standard woven wire fence has been erected, and 2.17 miles of snow fences erected, as follows:—

Subdivision.	Wire Fence, Miles.	Snow Fence Miles
<i>District No. 1—</i>		
Rivière du Loup..	6.59	1.00
Lévis..	1.00	0.00

Total..	40.72	2.17

MAIL CATCHERS.

Mail catchers were erected at the following locations on the Ste. Flavie Subdivision: Ste. Luce, St. Anaclet, St. Simon, St. Eloi, St. Arsene. Halifax Subdivision: Fairview.

TURNABLES.

Foundation, centre pier and end wall for standard 80 foot turntable was built at Sayabec, and the grading of approach completed. Contract has been let for the turntable.

A 75 foot through plate girder turntable on concrete foundation was installed at Point Tupper to replace the old 55 foot turntable at that place.

The centre of the turntable at Chaudière Junction was renewed.

TERMINAL IMPROVEMENTS.

Improvements at terminals have been shown under various headings.

Ste. Rosalie Junction—

One crossover track was built in yard to complete the yard rearrangement started in 1912.

Halifax—

At Richmond Yard a high rock bluff on the inside of a 10 degree curve has been removed so that the curvature of the main line has been reduced to a 6 degree curve. Yard at this point is being entirely remodelled. Work 90 per cent completed.

Halifax Ocean Terminals—

Following upon the filing of the plans and descriptions for the expropriation of the terminal site on the 13th February, 1913, and for the right of way of the approach railway and yards on the 7th March, 1913, detailed plans and descriptions

SESSIONAL PAPER No. 20

with areas and full particulars of each separate property were prepared from new and original surveys and from deeds, descriptions and plans in the possession of the various owners. During the year detailed surveys, plans and descriptions have been made for 75 properties representing a total area of about 150 acres. These plans, areas and descriptions have been supplied to the board of appraisers and the solicitors appointed to value and acquire the land required.

Existing buildings and structures on the terminal site and right of way of the railway were vacated, sold and removed as the work progressed and it was found necessary to clear the areas required for the construction of the railway and other works. The sales by public auction for the disposal of the existing buildings were held in 1913 on June 27, August 5, October 2, October 24, November 4, and in 1914 on January 5.

Plans and specifications were prepared and tenders called for on the 29th of May, 1913, for the grading of the Halifax Ocean Terminals railway including fencing, clearing, grubbing, grading, culverts, temporary bridges, road and street diversions and alterations; the construction of a rubble mound breakwater at Point Pleasant park and filling up bulkhead quays and piers in Halifax harbour and also for the freight terminal yard and alteration of the Intercolonial railway at Bedford basin and Rockingham and Fairview.

The whole work was divided into two contracts or sections. Section No. 1 included all the work required between Rockingham and Jubilee house. Section No. 2, all work south and east of Jubilee house, including the breakwater, filling and terminal yards at Halifax harbour. Separate tenders were obtained for each of the two sections and the tenders of the Cook Construction Company, Ltd., and Wheaton Bros., were accepted for both sections on July 2, 1913.

Work was begun on the Fairview end of the railway towards the end of July, and on the Halifax harbour end in August, and construction camps have been established at each end.

The clearing of the right of way has been completed from Bedford basin to Coburg road, and from South street to Halifax harbour. Stanford's ponds at Fairview were drained in August, and a temporary junction was made with the main line of the Intercolonial railway.

The contractors' temporary standard gauge tracks have been extended southward beyond Bayers' road and the excavation of the cutting between Stanford's ponds and Bayers' road is being proceeded with. Considerable difficulty has been encountered in blasting the hard laminated shale rock in this heavy cutting due to the great dip of the strata and as a result the progress made has not been so good as the contractors had anticipated.

The excavated materials from this cutting are being used for filling along the west shore of Bedford basin to make up the site for the freight terminal yard between Rockingham and Fairview.

The Western Union Telegraph Co.'s lines have been diverted from the east side to the west side of the Intercolonial railway, between Rockingham and Fairview so as to be clear of the new freight terminal yard.

A concrete culvert has been completed under the railway at station 75-40—just north of Mumford road.

Grading has been nearly completed south of Mumford road from station 80:00 to station 96:50 and near Quinpool road from station 113:00 to station 118:10.

The excavation of the main line cutting and terminal site and the filling in Halifax harbour is being proceeded with, between Bower road and the Halifax gas works.

A temporary standard gauge branch line for the construction of the breakwater has also been constructed from the main line near Young avenue to the site of the breakwater near Fort Ogilvie in Point Pleasant park.

DOCKS—FIRST UNIT—HALIFAX OCEAN TERMINALS.

Detailed plans and specifications were prepared and tenders called for on September 2, 1913, for Contract No. 3, docks, first unit, of the Halifax Ocean Terminals, which included 6,532 lineal feet of concrete quay wall; dredging of the harbour to a depth of 45 feet at low water of ordinary spring tides; filling and grading of areas to be reclaimed from Halifax harbour; construction of main intercepting and outfall sewers, and concrete and timber piling and concrete foundations and substructures for passenger and cargo transit sheds and buildings. In response to the first call for tenders, several were received, but as none of them were satisfactory, all were rejected. Tenders were called for a second time, and several were again received on the 20th of November. The tender of Messrs. Foley Brothers, Welch, Stewart and Fauquier was accepted on the 27th November, and the contractors arrived in Halifax and established their offices there, in January, 1914.

A camp building, stores, machine and blacksmith shops are being fitted up on Pleasant street, near the site of the dock works.

On account of the depth of water required and the nature of the work to be done in connection with this contract, a large amount of new and specially built plant has to be provided. The type and details of plant to be used have been carefully considered.

A sub-contract for dredging and for the filling of the reclaimed areas with materials to be borrowed by dredging has been let by the principal contractors to the W. J. Poupore Company, Limited, Montreal. The latter's steam suction hopper dredge *Prince Ito* started work on the 24th March filling for pier "A". Arrangements have been made for the steam dipper dredge *King Edward*, belonging to the same company, and now at Bathurst, N.B., with its accompanying scows and tugs to begin work as soon as possible after the harbour at Bathurst is clear of ice.

ENGINEERING.

(Halifax Ocean Terminals.)

The superintending engineer's office which has been temporarily located in Montreal from December, 1912, was transferred on August 18, to 137 Pleasant street, Halifax, a property on the terminal site which has been acquired by the Government, and which was converted into an office for the superintending engineer and his staff. An office engineer, resident engineer for the railway works, resident engineer for the dock works and a chief clerk were appointed, and the necessary staff of assistant engineers, draughtsman, instrumentmen, etc., organized and equipped to design and take charge of the works.

Point du Chêne.—A drain 1,052 feet was laid from the turntable pit at this place.

Pirate Harbour and Mulgrave.—Yard at Pirate Harbour was enlarged, a total of 3,562 feet of track being laid. Meter in concrete box installed to measure water supplied to ship. Mechanical stores building remodelled.

Point Tupper.—During the year a complete rearrangement of the yard was made involving extensive excavation and the relocation of and relaying of all existing sidings, which resulted in the changing of 15,000 feet of existing sidings and the addition of 6,080 feet of sidings. This work, and the buildings mentioned are mainly on account of the fire which wiped out practically all the terminal buildings at Point Tupper in 1912, and the yard changes were due to the rearrangement made by the change in location of the various buildings. This work is 99 per cent completed.

Sydney.—Mechanical Stores Building remodelled. Second-hand boiler installed in engine house. Extension to ticket office.

SESSIONAL PAPER No. 20

DAMAGES BY FLOODS.

Slight damage was done to the road bed in April at six (6) points on Fredericton subdivision on account of ice jam in the Nashwaak river.

The spring freshet caused slight damage on the Truro subdivision, as follows:—
Maccan.—Dam above track broke, washing out the ballast section.

Little Forks Bridge.—Dam broke and undermined pier of the bridge. Repaired with rip-rap and crib work.

DAMAGE BY FIRE.

Rivière du Loup Subdivision.—

St. Paschal.—Two hundred feet of railway fence burnt October 1, 1913.

Chaudière Subdivision.—

St. Eugene.—Three box cars, 75 ties and 309 feet of rail fence burnt June 22, 1913.

Moncton Subdivision.—

Bathurst.—Station burnt down April 5, 1913.

Red Pine.—Pump house burned down July 23, 1913.

Campbellton Subdivision.—

Campbellton.—Inside office and store adjoining engine house gutted by fire February 9, 1914.

Truro Subdivision.—

Amherst.—Section tool house burned down, February 14, 1914.

Windsor Subdivision.—

One-quarter mile of railway fence burned, August 22, 1913.

Mulgrave Subdivision.—

Hopewell.—Section tool house burned down May 26, 1913.

Marshy Hope.—Section tool house burned, April 23, 1913.

Sydney Subdivision.—

West Bay Road.—Pump house burned down August 23, 1913.

Cleveland.—Shelter station burned down, October 3, 1913.

Stellarton Subdivision.—

Loch Broom.—Shelter station burned down, June 11, 1913.

NEW LINES TAKEN OVER.

August 21, 1913, the "Sydney Mines Diversion," 9-53 was completed and put in operation as part of the North Sydney subdivision. This length of track connected Sydney Mines, on the North Sydney subdivision, with Sydney subdivision at Georges river, and the work involved consisted of extensions and additions to the sidings at Sydney Mines, connection with the Nova Scotia Steel and Coal Company's mines at Florence, a combined station and dwelling and a through siding at Florence, a connection with the McKay line at Little Bras d'Or, a combined station and dwelling and a short business siding at Little Bras d'Or, a passing siding at mile 4.8 and a short business siding and a shelter station at Watson's cove. The entire "diversion" has been laid with new 80-lb. rails; all bridges and culverts are of a permanent construction; the entire length has been fenced, and road-bed is standard.

NEW LINES—UNDER CONSTRUCTION.

A contract has been let for a diversion of line from Nelson, on the Loggieville-subdivision, to the south-west Miramichi bridge, on the Moncton subdivision; 2.69 miles to replace existing line 5.55 miles. Contractor has plant on the ground ready to start work.

A contract was let for a line from Leitches creek, on the Sydney subdivision to North-Sydney, on the North-Sydney subdivision, about 4.3 miles. Work three per cent completed.

RESURVEYS.

As there were no accurate records of the physical characteristics of the railway, the works of resurveys to obtain these records is under way and following completed at 31st March, 1914.

Resurveys for standard right of way plans:—

Halifax subdivision—

Mileage 0.00 to 61.87. 61.87 miles.

Plans for above completed.

Mileage 0.00 to 40.00. 40.00 miles.

Resurveys for standard track profiles:—

Halifax subdivision—

Mileage 0.00 to 61.87. 61.87 miles.

Truro subdivision—

Mileage 0.00 to 46.42. 46.42 miles.

Total. 108.29 miles.

Profiles for above completed.

Halifax subdivision—

Mileage 0.00 to 61.87. 61.87 miles.

Standard station yard plans have been completed as follows:—

Chaudière subdivision.	4 plans.
Lévis subdivision.	1 “
Rivière du Loup subdivision.	4 “
Ste. Flavie subdivision.	3 “
Nicolet subdivision.	1 “
Campbellton subdivision.	4 “
Moncton subdivision.	12 “
Fredericton subdivision.	4 “
Truro subdivision.	3 “
St. John subdivision.	1 “
Mulgrave subdivision.	6 “
Sydney subdivision.	6 “

SESSIONAL PAPER No. 20

BRIDGES AND CULVERTS.

Chaudière subdivision—

Six wooden box culverts were replaced with concrete pipe culverts.

Ten feet open masonry culvert at Ste. Rosalie Junction extended twenty feet.

Becancour river bridge—

The contract for the new steel spans has been let and the bridge will be finished about the 1st of July. 4 deck plate girder spans 106 feet 8 inches, 98 feet 10½ inches, 103 feet 1½ inches and 100 feet 11½ inches.

Lévis subdivision—

Four masonry wall culverts were replaced with concrete pipe culverts.

Rivière du Loup subdivision—

Eleven wooden box culverts were replaced with concrete pipe culverts.

Rivière du Sud bridge at Montmagny—

A start was made on renewing the eight piers and two abutments of this bridge by railway forces. False work was driven and pier No. 9 torn down and excavation for new pier carried to hard pan. A contract is to be awarded for the balance of the work.

Ste. Flavie Subdivision—

Rivière du Loup Bridge.—Work was started by railway forces extending the three (3) piers and two (2) abutments of the bridge to take a double track bridge. Piers Nos. 1 and 2 have been completed and the work at other points under way.

Nicolet Subdivision—

A new concrete pipe culvert was put in at Mileage 4.5.

Campbellton Subdivision—

Seven (7) open culverts were replaced with concrete pipe culverts.

Moncton Subdivision—

Four (4) wooden stringer bridges replaced with steel beams and new decks. Two wooden stringer bridges renewed.

Brown's Siding.—One new concrete pipe culvert put in.

Fredericton Subdivision—

Mersereau's Brook.—The old bridge has been taken out here and a 12-ft. concrete arch culvert put in and fill over same made and track lifted one foot and the work at this place will be finished about two or three weeks after the frost is out of the ground.

Keenan's Brook.—The old bridge was taken out and a 14-ft. concrete arch put in and fill made over same and track lifted five feet and work will be finished in connection with this crossing in two or three weeks after the frost is out of the ground.

Covered Bridge.—A diversion of line with concrete abutments and steel span to replace present wooden structure is underway and work 70 per cent completed.

Nelson's Hollow Bridge.—Nothing was done here on account of a proposed change in alignment and a new substructure and steel bridge will be put in this year.

Nashwaak River Bridge.—Which consists of two abutments and four piers 3 deck Truss spans and 2 deck girder spans. Contract for substructure was let and about 50 per cent of same is finished. The substructure will be finished about August 1 and the steel spans will be erected this summer. The steel spans for this bridge are being taken out of the main line from places where it was required to put in new spans in order to take the heavy power.

Mileage 3:20.—A wood box culvert was put in for the N. B. Pulp and Paper Co., Limited.

5 GEORGE V., A. 1915

St. John River Bridge.—Motive power for swing span on St. John river bridge at Fredericton. The contract for supplying engine has been let and engine has been supplied. The installing of this engine will be completed about the 1st of August.

Truro Subdivision—

Four (4) wood stringer spans renewed with steel beams and new decks.

Halifax subdivision—

Four (4) wood stringer spans replaced with concrete pipe culverts.

St. John subdivision—

Five (5) wood stringer spans replaced with concrete pipe culverts.

Point du Chene subdivision—

Five (5) culverts renewed.

Windsor Branch—

One (1) new stringer span renewed with steel beams and new deck.

Mulgrave subdivision—

West River, Antigonish.—Work of replacing wooden trestle approach of above span with concrete substructure and steel spans started by contract work, and work 18 per cent completed.

One (1) wooden wall culvert replaced with concrete pipe culvert

Sydney Subdivision—

Grand Narrows.—New end lift gear installed on swing span bridge.

Stellarton Subdivision—

French River Bridge.—Two (2) piers of this bridge were renewed with concrete from low water mark up, by Railway forces. Three (3) wood wall culverts replaced with concrete rail top culvert.

Oxford Subway.—Twenty-foot through plate girder span with ballast floor. The substructure for steel span is finished and the contract for steel has been let. The work will be finished about the middle of June.

Repairs have been made to the following bridges:—

Sydney Subdivision—

Ottawa brook, Walker's gulch, Leitches' creek, Ball's creek, West Bay road.

Mulgrave Subdivision—

Yankee grant, James river.

Stellarton Subdivision—

Orange brook.

Truro Subdivision—

Folleigh, River Philip, Little Forks.

Moncton Subdivision—

Barnaby river, third crossing; Barnaby river, second crossing; Bartibogue, Nipisiquit, Tete a Gouche, Elm Tree, Belledune.

SESSIONAL PAPER No. 20

Campbellton Subdivision—

Metis, Indian brook, Moffatt's.

The work in connection with the various alterations of thirty spans was completed.

A diver was employed to report on the condition of the substructure of the Mulgrave ferry landing below water.

General inspection has been made of all bridges.

SIGNALS.

Contract has been let for installation of Automatic Block Signals, as follows:—

Halifax Subdivision.—

Halifax to Windsor Junction, 14 miles double track.

Truro Subdivision.—

Painsec Junction to Moncton, 7 miles double track.

St. John Subdivision.—

Hampton to St. John, 20 miles of double track.

Contract about 10 per cent completed.

Contract has been let for the installation of telephone train despatching system from St. John to Halifax. Work about 90 per cent completed.

ELECTRIC CROSSING BELLS.

Electric crossing bells have been installed at 38 (thirty-eight) crossings.

CROSSING GATES.

Crossing gates were installed at Wentworth street, Windsor, N.S., on the Windsor subdivision.

TELEGRAPH LINE.

Construction started on telegraph line, from Ste. Rosalie Junction to Moncton on Great Northwestern Company's poles.

Poles erected for telegraph line, Chatham to Nelson.

ELECTRIC LIGHTING.

Ste. Flavie.—Electric lighting system installed for station platform.

Chatham.—Freight shed wired for electric lighting.

Sussex—Installation of temporary lights for station platform lighting, on account of new station building.

Moncton.—Wiring extension of freight car repair shop for electric light. Lighting system repaired in Government residence, corner Main and Archibald streets.

Truro.—Lighting system of new passenger station completed. Semaphore wires also installed.

Halifax.—New motors installed. Motors for shop drive.

Mulgrave.—Shifting semaphore, telephone and electric light wires in yard.

Point Tupper.—New engine house wired and lighting system installed. Government dwelling apartments wired and lighting system installed.

REAL ESTATE.

Land has been expropriated for the following work: Diversion of line from Nelson to Derby Junction; new bridge and change of line at Nashwaak; improvements at Fredericton; Pugwash spur line; ballast pit at Blacklands. During the year 97 leases were prepared.

CONSTRUCTION SURVEYS.

Painsec Junction to Oxford Junction.—On October 15 a location party was placed in the field for the purpose of making a complete right of way and track traverse survey from Amherst to Oxford Junction, and also for the purpose of making surveys covering preliminary information required to ascertain cost of double tracking and reduction of grades to an 0.6 per cent ruling grade in both directions between above points.

On November 17 a second party was placed between Painsec Junction and Amherst for the purpose of obtaining similar information, in regard to existing line, double tracking, and proposed reduction of grades to 0.6 per cent. The preliminary survey work between Painsec Junction and Oxford Junction covering record of existing track, information for cost of double tracking and cost of revision for grade reductions was completed. In addition locations have been placed on the ground for the necessary line changes for an 0.6 per cent grade as follows:—

Revision at Meadow Brook. Revision Dorchester to Sackville. Revision at Amherst. Revision Maccan to Springhill Junction. Complete estimates covering construction cost of grade revisions and double track Painsec junction to Oxford junction are now in course of preparation.

Point Tupper to Sydney.—In June, 1913, a party had been placed in the field in Cape Breton for the purpose of making surveys covering information required for the reduction of grades on the main line from Point Tupper to Sydney to an 0.6 per cent ruling grade in both directions.

Complete preliminary information has been obtained covering cost of reducing grades to 0.6 per cent in Cape Breton, from Point Tupper to Sydney, and estimates are now being prepared.

North Sydney to Leitches Creek.—Various surveys were made in 1913 and a final revision made in the present year, for a line from North Sydney to a junction with the existing main line near Leitches' creek. This location, 4.3 miles in length, has ruling grades of 0.6 per cent in both directions.

About November 1, 1913, a construction party was placed on this work to locate the line and prepare same for construction. Contract was let for construction on January 12, 1914.

New Glasgow to Mulgrave.—A party was placed in the field working from New Glasgow to Mulgrave. This survey is now proceeding. It comprises a track traverse and complete information in regard to existing line for purpose of record. This information is also necessary as a basis for further surveys covering grade reductions.

Painsec Junction to Port Elgin.—A reconnaissance survey is now being made between Painsec Junction and the New Brunswick and Prince Edward Island rail-

SESSIONAL PAPER No. 20

way at Port Elgin, looking to the feasibility of obtaining a line over this route, with the idea of having a short and direct connection with the car ferry terminals at Cape Tormentine. This survey is not yet completed.

STANDARD PLANS.

Thirty (30) standard plans have been prepared for various bridge spans, culverts, etc., and fifty (50) standard plans on buildings, fences, platforms, track material, etc.

C. B. BROWN,
Chief Engineer.

March 31, 1914.

5 GEORGE V., A. 1915

PRINCE EDWARD ISLAND RAILWAY.

Report of Chief Engineer's Department.

ROAD-BED AND TRACK.

Subdivision or Branch.	TABLE OF MILEAGE.	
	Main Line Miles.	Passing and Other Sidings, Spurs, etc.
Charlottetown.....	116.1	16.2
Souris.....	54.7	3.84
Georgetown.....	24.4	2.87
Cape Traverse.....	11.8	0.98
Murray Harbour.....	47.8	2.32
Elmira.....	9.9	0.93
Montague.....	6.2	0.27
Vernon.....	4.3	0.13
	275.2	27.54

RAILS.

1.1 miles of 56 pound rails were laid in the main line and branches, replacing 50 pound rails and worn out rails of other weights.

TIE RENEWALS.

49,978 track ties were renewed in main and branch lines.

1,326 track ties were renewed in yards and sidings.

22 sets switch ties were renewed.

BALLASTING.

9½ miles of track was ballasted with sand.

2½ miles of track was ballasted with cinders.

NEW TRACKS.

New tracks and extensions were constructed as follows:—

Bloomfield, siding extended 250 feet.

Portage, siding extended 240 feet.

Conway, siding extended 130 feet.

Ellerslie, siding extended 170 feet.

Port Hill, siding extended 300 feet.

New Annan, siding extended 270 feet.

Frederieton, siding extended 170 feet.

Freetown, siding extended 240 feet.

Bradalbane, siding extended 170 feet.

Morell, siding extended 250 feet and spur made into through siding.

Kirkwood, siding extended 200 feet and spur made into through siding.

Grandview, siding extended 200 feet and spur made into through siding.

Village Green, new siding 200 feet long.

SESSIONAL PAPER No. 20

BUILDINGS.

New buildings, platforms, etc., or alterations or additions to existing buildings were constructed during the year, as follows:—

O'Leary.—New station constructed, under contract, at this point.

Blóomfield.—New station platform and stock pen built.

Coleman.—New station platform was built.

McNeill's Mills.—New station platform was built.

Kensington.—New porch built to agent's dwelling.

Cape Traverse.—New station platform.

Sherwood.—New shelter station 12 x 22 feet was constructed, and new platform for same.

Douglas.—New shelter station 10 x 20 feet was constructed with platforms to suit.

In addition to the above, general repairs, as required, were made to all railway buildings and structures.

FENCING.

48,100 lineal feet standard wire fence has been erected.

5,360 lineal feet new permanent snow-fence has been built.

3,400 lineal feet portable snow-fence has been built.

Necessary repairs have been made to other fence.

BRIDGES AND CULVERTS.

The necessary repairs were made to bridges.

Fourteen concrete pipe culverts were installed.

Seven new wooden culverts were built.

Seven stone culverts were repaired.

Forty-four wooden culverts were repaired with timber.

DOCKS AND WHARVES, ETC.

The docks and wharves at Summerside, Georgetown, and Souris were given general repairs, and at Georgetown a new covering of 3-inch deal was placed.

C. B. BROWN,
Chief Engineer.

March 31, 1914.

5 GEORGE V., A. 1915

INTERCOLONIAL RAILWAY, PRINCE EDWARD ISLAND RAILWAY.
OFFICE OF THE MECHANICAL ACCOUNTANT,

MONCTON, N.B., July 7, 1914.

SIR—I beg to submit the following information for the annual report covering the Intercolonial and Prince Edward Island railways for the fiscal year ended March 31, 1914.

A.—Statement showing the number of locomotives and the different classes of other rolling stock on the line of the Intercolonial railway.

B.—Statement showing the mileage made and the coal, oil, grease and waste consumed by locomotives on the Intercolonial railway.

C.—Statement showing the number of locomotives and the different classes of other rolling stock on the line of the Prince Edward Island railway.

D.—Statement showing the mileage made and the coal, oil, grease and waste consumed by locomotives on the line of the Prince Edward Island railway.

E.—Summary of the principal work done in the shops at Moncton, Halifax and Riviere du Loup for the Intercolonial railway.

F.—Summary of the principal work done in the shops at Charlottetown for the Prince Edward Island railway.

The following rolling stock was purchased for the Intercolonial railway.
On Capital Account.

- 38 Locomotives (9 switching, 4 passenger, 25 freight).
- 3 Sleeping cars.
- 2 Dining cars.
- 5 Colonist cars.
- 2 Combination first class and baggage cars.
- 715 Box cars, steel frame, 60,000 capacity.
- 20 Vans.

On Renewals Account (Revenue).

- 1 Locomotive (freight).
- 2 Postal cars.
- 2 Combination first class passenger and baggage cars.
- 1 Baggage car.
- 8 First class passenger cars.
- 671 Box cars, steel frame, 229, 80,000—442, 60,000 capacity.
- 100 Platform cars, steel underframe, 80,000 capacity.
- 100 Hart convertible dump cars, 80,000 capacity.

The following cars were built in the shops at Moncton on Renewals Account (Revenue).

- 20 Box baggage cars.
- 26 Box cars for carrying Automobiles, 60,000 capacity.
- 9 Vans.
- 1 Flanger.
- Two first class, 2 postal, 1 baggage, 456 box and 100 platform cars purchased, 1 flanger and 9 vans built in the shops replaced the same number condemned.

SESSIONAL PAPER No. 20

The following cars were converted in the shops at Moncton:

Car "Dufferin" from parlour to official, 22 box to stock, 15 box to survey and inspection, and 100 box to platform.

124 box cars 60,000 capacity are on order in the shops on renewals account, and 24 passenger refrigerator cars on capital account.

41 Old small type locomotives were condemned and retired during the year, and were replaced by 15 heavy consolidation type, 14 of which were purchased on renewals account in 1912-13, and 1 in last year, the 41 having a tractive power of 571,415 lbs. as against 632,000 lbs. of the 15.

I have the honour to be, Sir,

Your obedient servant,

J. J. WALKER,
Mechanical Accountant.

G. R. JOUGHINS, Esq.,
Superintendent Rolling Stock,
Canadian Government Railways, Moncton, N.B.

Mechanical Accountant.

SESSIONAL PAPER No. 20

The following work was done in the Locomotive Shops during the year, at Moncton:—

Erecting Shop—

- 42 locomotives were partly rebuilt.
- 76 locomotives received general repairs.
- 20 locomotives received heavy repairs.
- 60 locomotives received light repairs.
- 1 locomotive received specific repairs.

Blacksmith Shop—

- 2,729,025 lbs. iron forgings, including 1,294,845 lbs. bolts, were made.
- 944,561 lbs. steel forgings were made.
- 346,245 lbs. nuts were made.

Pattern Shop—

- 177 cast-iron patterns were made.
- 100 cast-iron patterns were repaired.
- 33 cast-iron patterns were altered.
- 54 patterns were made for steel.
- 45 patterns were repaired for steel.
- 17 patterns were altered for steel.
- 73 brass patterns were made.
- 78 brass patterns were repaired.
- 33 brass patterns were altered.
- 5 patterns were made for malleable.
- 12 patterns were repaired for malleable.
- 4 patterns were altered for malleable.

Brass Foundry—

The following was the output for the year:—

- 495,003 lbs. brass bearings.
- 73,065 lbs. brass castings.
- 56,700 lbs. antimonial lead.
- 22,673 lbs. babbitt metal.
- 420 lbs. metallic packing.

Machine Shop—(Brass turning)—

- 375 air gauges were repaired.
- 200 air hammers were repaired.
- 250 air pumps were repaired.
- 300 lubricators were repaired.
- 500 beading tools were repaired.
- 50 beading tools were made.
- 150 brake cams were made.
- 350 brake cam nuts were made.
- 200 brake cam screws were made.
- 50 bell ringers were made.
- 50 bottle jacks were repaired.
- 24 blow-off cocks were made.
- 300 sets of dies were made.
- 200 cylinder cocks were made.
- 250 engine brasses were made.
- 25 hose couplings were made.

Machine Shop—(Brass turning)—Continued.

- 100 flagstaff castings were made.
- 100 gauge glass cocks were made.
- 300 hydraulic jacks were repaired.
- 300 heater regulators were repaired.
- 600 injectors were repaired.
- 50 injector check valves were made.
- 500 oil cups were made.
- 300 pump governors were repaired.
- 250 reamers were made.
- 50 steam chest release valves were made.
- 25 steam chest nipples were made.
- 75 small tender cocks were made.
- 375 steam gauges were repaired.
- 12 large tender cocks were made.
- 100 taps were made.
- 50 try-cocks were made.
- 300 tube cutters were made.
- 200 wheel defect gauges were made.

In addition to the above, all pump governors, heater regulators, air brake cylinders, engine valves and boiler mountings off all engines and tenders that went through the shops were overhauled and repaired, and a lot of work was also done for outside shops and for the car department.

Machine Shop—(Motion)—

- 3 links were made.
- 233 link pins, blocks and bushes were repaired.
- 1 link hanger was made.
- 231 link hangers were repaired.
- 12 eccentric rods were made.
- 444 eccentric rods were repaired and pins fitted.
- 4 equalizing bars were repaired.
- 127 reversing shafts were trued up and pins and bushes fitted.
- 14 reversing shaft boxes were made.
- 194 reversing shaft boxes were repaired.
- 117 reversing levers were overhauled and pins and bushes fitted.
- 88 reversing lever pawls were repaired.
- 35 reversing lever pawls were made.
- 119 reversing reach rods were repaired and fitted.
- 27 valves were made.
- 162 valves were faced and yokes fitted.
- 111 valve rod keys were made.
- 66 valve stems were fitted on yokes.
- 50 valve heads were faced.
- 73 valve division rings were made.
- 587 valve packings were machined and fitted.
- 69 valve guide boxes were bushed.
- 105 throttle rods were repaired and 29 ends fitted.
- 95 throttle rod glands were bushed.
- 97 throttle levers were fitted with quadrants, springs and pins.
- 285 big end brasses were machined and fitted.
- 39 old big end brasses were machined and fitted.
- 236 small end brasses were machined and fitted.

SESSIONAL PAPER No. 20

Machine Shop— (Motion)—Continued.

- 191 main rod liners were made and fitted.
- 150 big end keys were made.
- 609 side rod bolts were made.
- 243 side rod nuts were made.
- 788 side rod bushes were made and fitted.
- 272 knuckle joint pins were made.
- 316 knuckle joint bushes were made.
- 189 crossheads were trued and keys fitted.
- 172 crosshead pins were made.
- 70 piston rods were machined and keys fitted.
- 146 new rocker box bushes were fitted.
- 8 new rocker box bushes were made.
- 13 old rocker box bushes were fitted.
- 59 old rocker box bushes were relined.
- 361 hub plates were made and applied.
- 275 new driving box brasses were machined and applied.
- 417 old driving box brasses were relined and applied.
- 32 driving boxes were made.
- 704 driving boxes were bored and fitted to axle.
- 36 spring guards machined and applied.
- 93 elvin automatic grease cellars were made and applied.
- 235 eccentric straps were made.
- 215 eccentric straps were rebored and fitted.
- 172 new pulleys were made.
- 78 pulleys were refitted.
- 26 trailer truck brasses were bored and fitted.
 - 1 eccentric crank was made.
 - 1 starting valve was made.
- 24 eccentric keys were made and fitted.
- 12 snow plough bushes were bored and fitted.
- 4 cap plates were made.
- 6 crane bushes were bored and fitted.
- 33 main rod brasses were machined.
- 2 big end straps were made.
- 5 new intermediate brasses were machined.
- 8 small end wedges were made.
- 78 check plates were made and applied.
- 8 trunnion bushes were made.
- 6 trunnion castings were machined.
- 90 elvin grease spring plates were applied.
- 150 eccentric feathers were machined.
- 100 reversing lever springs were made.

Machine Shop.—

- 357 new driving tires were applied.
- 494 driving tires were turned off.
- 176 engine truck tires were applied.
- 272 engine truck tires were turned.
- 365 new tender tires were applied.
- 543 new car tires were applied.
- 1,549 new car tires were turned.
- 42 trailer truck tires were turned.
- 323 driving journals were trued up.

Machine Shop—Continued.

- 620 hubs were faced.
- 12 cast-iron smoke stacks were machined.
- 300 crossheads were replaned.
- 195 cylinder heads were made.
- 133 old piston heads were turned.
- 81 new piston rods were made.
- 22 equalizing bars were made.
- 161 piston heads were machined.
- 17 cylinder and half saddles were bored and fitted.
- 7 engine truck centre castings were machined.
- 23 driving wheel centres were machined.
- 20 guide bars were made.
- 963 wedges and shoes were made.
- 169 guide blocks were made.
- 7 locomotive frames were made and machined.
- 32 wing castings were machined.
- 16 oil cellars were made.
- 226 driving brake hanger pins were made.
- 16 link blocks were made.
- 9 main rod straps were made.
- 695 driving box brasses were slotted and recessed.
- 849 driving boxes were bored and faced.
- 4 die blocks were made.
- 28 spring equalizing bushes were made.
- 28 cross ties were made.
- 683 driving boxes were planed.
- 200 W.A.B. pins were made.
- 2 trolley wheels were made.
- 94 driving box brasses were made.
- 122 steam chest covers were repaired.
- 110 guide bars were replaned.
- 12 driving boxes were made.
- 7 engine truck frames were assembled.
- 3 dry pipes were made.
- 8 snow plough flanges were made.
- 123 steel wheels were bored for refrigerator cars.
- 16 snow plough bevel gears were made.
- 1 snatch block was made.
- 6 jack presses were made.
- 25 brackets were made.
- 52 grease boxes were made.
- 4 new false valve seats were made.
- 7 new bells were made.
- 94 steel nuts for piston rods were made.
- 72 new fulcrum bushes were made.
- 16 steel coal crane rollers were made.
- 650 pairs tender tires were turned off.
- 4 pairs coal crane wheels were turned.
- 30 brake hangers and nuts were made.
- 9 centre drain castings were machined.
- 20 engine truck axles were applied.
- 11 trailer tires were applied.
- 72 steam chests were replaned.

SESSIONAL PAPER No. 20

Machine Shop—Continued.

- 100 brake hanger pins were made.
- 26 side rods were made.
- 176 spring equalizing beam bushes were made.
- 52 exhaust nozzles and tips were made.
- 35 cylinder head castings were made and machined.
- 280 pop valves were repaired.
- 134 whistles were repaired.
- 24 steam chests were made.
- 39 steam chest covers were made.
- 42 cylinder bushes were bored and fitted.
- 11 foot plates were made.
- 23 centre pin guides were made.
- 38 engine truck boxes were made.
- 140 steel wheels were bored and fitted.
- 25 tender axles were applied.
- 27 driving axles were applied.
- 1 trailer axle was applied.
- 78 car axles were applied.
- 41 smoke box doors and rings were machined.
- 30 crank pins were machined.
- 116 check plates were made.
- 12 crossheads were made.
- 1 engine truck housing was made.
- 10 eccentric cranks were made.
- 14 slide valves were made.
- 11 tube sheets were machined.
- 64 brake hangers were made.
- 1 piston rod was made.
- 13 fire box doors were machined.
- 178 engine truck tires were bored and fitted.
- 1 expansion bracket was made.
- 4 spectacle plates were made.
- 7 cylinders were bushed.
- 20 knowles pumps were repaired.
- 4 air compressors were repaired.
- 7,500 new and second hand axles were turned.
- 973,150 bolts were threaded.
- 307,000 lbs. nuts were tapped and 200,000 lbs. faced.
- 84,100 staybolts were threaded.
- 19,600 turn bolts were threaded.
- 16,807 engine studs were turned and threaded.
- 12,682 chilled wheels were pressed on axles.
- 15,178 chilled wheels were pressed off axles.
- 1,047 wedges were planed.
- 446 new axles were turned and fitted.
- 444 steel tired wheels were pressed on axles.

The air compressor at the Pintsch Gas Plant received general overhauling. The McMiller Coal cranes from Rivière du Loup and Halifax, and the Browning Coal crane from Campbellton went through the shops and received general repairs.

The coal crane at St. John was overhauled.

Repairs were also made to smaller cranes, and to concrete mixers, shovels, etc.

Track Blacksmith Shop—

- 438 frogs were made.
- 162 frogs were repaired.
- 146 spring frogs were repaired.
- 498 split switches were made.
- 213 switch points were repaired.
- 250 switch stands were made.
- 51 switch stands were repaired.
- 79 hand cars were repaired.
- 10 hand cars were made.
- 667 fish plates were made.
- 158 heel castings were finished.
- 34 car stops were made.
- 40 stone drills were made.
- 822 guard rails were made.
- 818 rail cutters were made.
- 544 rail cutters were repaired.
- 158 claw bars were made.
- 102 claw bars were repaired.
- 188 lining bars were made.
- 16 lining bars were repaired.
- 396 drills were made.
- 130 drills were repaired.
- 238 spiking hammers were made.
- 23 spiking hammers were repaired.
- 59 track jacks were repaired.
- 53 track ratchets were repaired.
- 3 diamond crossings were made.
- 1 diamond crossing was repaired.
- 327 chisels were made.
- 171 chisels were repaired.
- 582 switch plates were made.
- 14 eccentric bolts were made.
- 6 eccentric bolts were repaired.
- 62 riveting straps were made.
- 12 pulleys were made.
- 130 gate hooks were made.
- 52 shovel teeth were made.
- 55 staples were made.
- 17 truss rods were made.
- 24 striking hammers were made.
- 2 flanger limbs were made.
- 463 rail braces were made.
- 40 iron knees were made.
- 12 concrete anchors were made.
- 125 pile driver shoes were made.
- 6 motor cars were repaired.
- 9 drilling knees were made.
- 57 curve rods were made.
- 480 switch rods were made.
- 39 ground stands were made.
- 20 ground stands were repaired.
- 8 picks were made.

SESSIONAL PAPER No. 20

Track Blacksmith Shop—Continued.

- 194 picks were repaired.
- 40 picks made in rough.
- 93 rail tongs were made.
- 4 rail tongs were repaired.
- 124 track wrenches were made.
- 23 track wrenches were repaired.
- 23 track gauges were made.
- 12 track gauges were repaired.
- 56 lorries were made.
- 5 axes were repaired.
- 3 axes were made in rough.
- 61 trolley wheels and axles were machined.
- 20 sledges were made.
- 2 spouts were repaired.
- 14 hooks were repaired for Nun-signal.
- 20 hand car wheels were repaired.
- 1 crossing gate was repaired. (Main street).
- 53 double head rods were made.
- 46 double tie rods were made.
- 76 hinge rods were made.
- 323 connecting rods were made.
- 5 rail benders were made.
- 2 rail benders were repaired.
- 2 snow plow platforms were made.
- 11 iron yokes were made.
- 862 jog plates were made.
- 4 adze were made in rough.
- 4 motor cars were repaired.
- 1,575 lbs. screw bolts were made and applied.
- 290 rails were cut.
- 12 rail tongs were made.

The Ballast spreaders, centre plows, ditchers, pile drivers, side plows, and all gear and equipment belonging to this machinery received general repairs.

The Rail sawing machine was repaired and extensive repairs made to the machines in the shop.

Tender Shop—

- 286 valves were repaired.
- 276 valve spindles were repaired.
- 174 running boards were removed.
- 130 running boards were repaired.
- 74 front beams were removed.
- 34 back beams were removed.
- 139 side curtains were finished.
- 151 cab doors were made.
- 363 cab sashes were made.
- 85 covering boards were made.
- 240 cab seats were made.
- 107 headlight bases were made.
- 8 headlight bases were repaired.
- 138 cabs were repaired.
- 59 cabs were made.

Tender Shop--Continued.

- 702 cushions were made.
- 926 hammer handles were made.
- 2,500 sledge handles were made.
- 14 mallets were made.
- 82 switch lamp bottoms were made.
- 51 tool boxes were made.
- 77 tool boxes were repaired.
- 36 wrench handles were made.
- 74 headlight boards were made.
- 13 back castings were made.
- 14 front castings were made.
- 30 buffer castings were made.
- 29 centre castings were made.
- 57 back boards were made.
- 5 step ladders were made.
- 91 fuse racks were made.
- 850 pump laggings were made.
- 96 sand cellars were made.
- 73 back curtains were made.
- 40 overhang boards were made.
- 2 crane houses were made.
- 72 flasks were made.
- 8 plates were made.
- 112 friction blocks were made.
- 14 tender lights were repaired.
- 14 cupboards were made.
- 8 boxes were made.
- 10 steps were made.
- 8 truss rods were made.
- 37 oil boxes were made.
- 1 crane beam was made.
- 16 horses were made.
- 3 bolsters were made.
- 10 benches were repaired.
- 17 benches were made.
- 29 outfit boxes were made.
- 74 outfit boxes were repaired.
- 66 boilers were hooped.
- 5 trucks were made.
- 290 trucks were repaired.
- 14 ladders were repaired.
- 14 ladders were made.
- 50 wheel-barrows were repaired.
- 3 tender frames were made.
- 4 wheel-barrows were made.
- 146 tender frames were repaired.
- 11 quadrants were made.
- 20 valve spindles were made.
- 119 cab floors were laid.
- 119 cab floors were removed.
- 94 covering boards were made.
- 24 spring castings were applied.
- 115 seats were made and applied.

SESSIONAL PAPER No. 20

Tender Shop—Concluded.

- 90 spiral springs were made and applied.
- 34 rabbit boxes were made.
- 30 transoms were made.
- 100 tender journal boxes were applied.

Boiler Shop—

- 38,926 stay-bolts were applied.
- 40,739 repaired tubes were applied.
- 16,300 copper furrules were made.
- 6,034 tubes were removed.
- 6,634 tubes were replaced.
- 35,739 tubes were pieced.
- 2,900 stay bolts were made.
- 14,129 tubes were rolled and repaired.
- 1,760 wheels were riveted.
- 268 plates were cut.
- 7,121 tubes were cleaned.
- 990 new tubes were applied.
- 500 scrapers were made.
- 390 ratch bolts were put in.
- 22 new door sheets were made.
- 39 new side sheets were made.
- 20 new tube sheets were made.
- 86 fire-boxes were patched.
- 93 boilers were tested.
- 118 tender frames were repaired.
- 122 stacks were made.
- 85 ash-pans were repaired.
- 39 ash-pans were made.
- 52 tender tanks were repaired.
- 8 smoke boxes were made.
- 9 smoke boxes were repaired.
- 4 mud-rings were welded.
- 18 front ends were removed and renewed.
- 8 steel cabs were repaired.
- 4 long stacks were made.
- 18 brake beams were made.
- 11 heating boilers were repaired.
- 16 coal doors were made.
- 18 coal chutes were made.
- 2 smoke box door rings were made.
- 43 petticoats were made.
- 19 petticoats were repaired.
- 74 coal buckets were made.
- 35 bolsters were made.
- 4 snow ploughs were ironed.
- 15 oil tanks were repaired.
- 1 water service boiler was tested.
- 1 water service boiler was repaired.
- 18 spring boards were repaired.
- 12 spring boards were made.
- 56 bolsters were repaired.
- 84 tender frames were repaired.

Boiler Shop—Continued.

- 76 front ends were applied.
- 1 ash pit box was made.
- 1 coal cart was made.
- 19 shop trucks were repaired.
- 2 fire boxes were made.
- 8 boilers were made.
- 5 binders were made.
- 2 booms were repaired.
- 2 water tanks were made.
- 4 plates for ss. *Scotia* were made.
- 2 dome flanges were made.
- 300 switch plates were made.
- 72 ash-pan slides were made.
- 10 drop stacks were made.
- 1 dope tank was made.
- 20 foot plates were made.
- 150 switch targets were made.
- 1 large bracket for steam shovel was made.
- 20 oil pans were made.

Tin and Copper Shop—

- 11,237 W.A.B. couplings were fitted to new hose.
- 6,326 signal and steam hose couplings were fitted to hose.
- 18,448 bushes were lined.
- 1,934 bushes were relined.
- 509 switch lamps were repaired and painted.
- 145 trail lamps were repaired and painted.
- 76 signal lamps were repaired and painted.
- 38 water cans were made.
- 24 water cans were repaired and painted.
- 372 economy heaters were repaired.
- 82 pumps were lagged.
- 20 ice boxes were made.
- 16 cab lamps were made.
- 42 headlights were repaired.
- 1,700 sheets corrugated roofing were repaired.
- 36 oil cans were made.
- 27 shop lamps were made.
- 31 tank delivery pipes were made.
- 55 tank delivery pipes were repaired.
- 117 drip pans were made.
- 41 water strainers were made.
- 6 steam pipes were made.
- 9 water tanks were lined.
- 404 lubricating plates were made.
- 27 smoke stacks were made.
- 40 gauge glass shields were made.
- 10 stove pipe bases were made.
- 12 vents were made.
- 32 lengths of stove-pipe were made.
- 26 refrigerator cars were relined.
- 3 snow melters were made.
- 10 steam coils were made.

SESSIONAL PAPER No. 20

Tin and Copper Shop—Continued.

- 11 snow ploughs and 8 flangers were piped for air and steam.
- 1 water service car was piped.
- 1 boarding car was equipped.
- 11 chutes were made.
- 12 sinks were made.
- 5 crane pipes were made.
- 90 crane pipes were repaired.
- 2 dope tanks were made.
- 8 drinking tanks were relined.
- 50 car blind tins were made.
- 7 stencils were made.
- 8 copper nozzles were made.
- 350 oil cups were made.
- 14 oil tanks were made.
- 15 passenger car tanks were made and painted.
- 24 ventilators were made.
- 72 corner plates were made.
- 4 copper covers were made.
- 4,050 sets valve steam packing were made.
- 3,000 sets metallic packing were made.
- 100 stove bases were made.

Repairs, alterations and renewals were made to copper pipes of steam pumps and lubricators, copper joints on steam chests, domes and cylinder covers, driving and truck boxes, Westinghouse air brake pipes, removed and replaced all lagging on 199 locomotives.

Equipped tenders with train line pipes for signal and steam lines, and all water pipes overhauled and repaired, where necessary, on 138 tenders.

Fifteen cars for the engineering department were equipped with train line pipes for signal air and steam, and fitted with inside equipment necessary in boarding cars.

Eight vans were equipped with train line pipes for signal air and steam, coal boxes put in, stoves set up, shields put in place, basins applied and closets installed complete.

Repairs were made to wash-basins, taps, closets, lamps, brass work, piping, etc., in 231 passenger, baggage and postal cars, which went through the passenger car repair shop.

A lot of plumbing was done and pipes and fixtures changed in car "Dufferin," which was converted to an official car.

Repairs were made to wash-basins, taps, closets, lamps, brass work, piping, etc., in 80 parlour, sleeping and dining cars and two official cars.

Repairs were made to wash-basins, closets, lamps, piping, etc., in 25 vans.

Extensive repairs were made to the elevator, heaters and plumbing in the general office building at Moncton. Repairs were also made in the railway cottages at Moncton, car cleaning building, Moncton station and rest room, and car mileage office, new shops, offices, freight shed, pintsch gas plant, Norton station, Moncton roundhouse, St. John freight house, Truro station, Sackville station, Amherst station, Oxford Junction station, Painsec Junction station, Sussex station, Springhill Junction station, restaurant at Moncton station, old mechanical offices, engineer's lobby at roundhouse, Millerton station, yard office Moncton station, and Campbellton station.

Stoves and pipes were repaired and furnaces put in condition in the different stations between St. John and Halifax, Loggieville and Fredericton, Dartmouth branch, Indiantown and Dalhousie branches, Moncton and Campbellton.

Electrical Department—

- 1,769 extension cords were repaired.
- 319 extension cords were made.
- 1,333 incandescent lamps were removed.
- 39 locomotive cabs were repiped and wired.
- 133 armatures were rewound.
- 70 headlights examined and repaired.
- 72 cab lamps were repaired.
- 35 armatures were repaired.
- 54 field coils were repaired and rewound.
- 25 desk lamp stands were made.
- 5 cranes were repaired.
- 216 starters were overhauled and repaired.
- 45 drop lamps were installed.
- 17 motors of cars were repaired.
- 17 electric bell systems were repaired.
- 4 electric drills were repaired.
- 1 electric motor for valve setter was installed.
- 276 motors were cleaned and oiled.
- 304 motor bushes were renewed.
- 2 electric hoists were repaired.
- 47 circuit breaker switches were repaired.
- 100 new switches were applied.
- 106 cooper Hewit lamps were repaired.
- 49 benches were piped and wired.
- 46 clusters were installed.
- 4 stationary boilers were wired.
- 80 motors examined and repaired.
- 16 motors were installed.
- 151 lighting systems on engines were tested.
- 2 transformers were installed.
- 1 booster was installed.
- 1 exciter was overhauled and repaired.

The starter on the bolt machine in the blacksmith shop was removed, repaired, tested and reapplied.

All pipes in duct were altered, repaired where necessary and painted. This was owing to the old line having to be changed on account of the freight car repair shop extension.

All electric wiring in car department was overhauled and repaired and a number of new extensions run.

New crossarms were applied to all poles in the Moncton yard and a number of new ones put up between the shops.

Switches were renewed in all cabinet boxes at new shops.

Lamps, hangers and brackets on all outside lamps were examined and all lamps renewed and brackets painted.

The gas meter room was wired and line run from the blacksmith shop. Three stationary hangers were installed and one extension cord.

All exposed wires about shop were painted. Switch boards were repaired.

The old wires or the wiring in the Moncton roundhouse was repaired.

The vacuum cleaner at the general offices was overhauled and repaired.

Electric bells were installed between the office of the superintendent rolling stock and the master car builder's office, and electric lights were replaced and hangers changed. Electric bells in the mechanical offices were overhauled and repaired.

SESSIONAL PAPER No. 20

Blue print machine in the draughting office was overhauled and repaired twice during the year.

The Bettington boiler was wired for gauges and indicators.

Crossarms were put up, and eight electric lines were installed in the new freight car shop. All hangers necessary with extension and all fittings were made complete. Time-keeper's office was equipped with additional lights and the old system overhauled and repaired.

The electric lighting system in official car No. 28 was examined and repaired.

The regulator in car "Stadacona" was repaired and adjusted.

Special Work—

A Bettington boiler with all pipe connections and motors was installed complete in the power-house at Moncton.

Piping was put in the new freight car repair shop extension for water service, and for air and electric wire line.

The wiring was completed in the freight car repair shop extension with all necessary extensions, switches, lamps, etc., and a steam pipe line was run to this shop.

The gas burners were removed from the boilers in the power-house, and the boilers fitted to again burn coal.

The gas producer plant was extensively repaired, also the furnaces and compressors.

The bull-dozer in the blacksmith shop received a general repair. The steam hammer and all other machines in this shop were overhauled and repaired where necessary.

Yard crane No. 15 received a general overhauling and a renewal of parts.

All machines in the machine shop were examined and repaired and kept in good working order.

The tanks at the pintsch gas plant were repaired and tested.

The boilers in the power-house were tested and a number of tubes were renewed.

The machinery in the passenger and freight car shops was overhauled and repaired and kept in good working condition.

The radiators in the stores and offices building were cleaned and repaired, and the piping overhauled and renewed where necessary.

The gas engines and the air compressor in engine room were overhauled and repaired.

The air line from the power-house was tested and leaky joints repaired. Valves on the air line were also renewed where necessary.

Three boilers of old locomotives sold were repaired.

Three iron racks were made for the shops to be used for storing journal boxes.

Large water tanks from Rivière du Loup were repaired, tested and returned.

An old tank which was removed from one of the motor cars was remodelled for water test purposes.

Three old boilers were repaired to be used for heating purposes at the River du Sud bridge.

An air hoist for Stellarton was rebuilt.

The gas holders at the gas producer plant were repaired.

A feed water heater repaired for St. John.

The boiler at the planing mill was repaired and tested.

The boilers in the boiler room were painted.

The boiler room was also painted and alterations were made in the steam line in the stores building.

The steam pipes and heating system in all the shops were repaired.

The air hoist for loading wheels was thoroughly overhauled.

The air compressor in the roundhouse at Moncton received a general repair.

Stoker parts were all examined and worn parts were renewed.

The hydraulagraph in the machine shop was repaired.

Two large testing tanks were built and tested.

The gas burners and connections were removed from the boilers in the track blacksmith shop and pintsch gas plant and stored, and the boilers fitted for burning coal.

An extension of 400 feet was made to the freight car repair shop at Moncton, and the work completed.

The following new machinery was installed in the Moncton shops: 5 air hammers, 10 air drills, 1-16 inch lathe.

The following work was done in the car shops during the year at Moncton:—

- 9 vans and 1 flanger were rebuilt.
- 26 box cars for carrying automobiles were built.
- 20 box baggage cars were built.
- 22 box cars were converted into stock cars.
- 15 box cars were converted into survey and inspection cars.
- Parlour car "Dufferin" was converted into an official car.
- 100 box cars were converted into flat cars.
- 14,580 freight and 545 passenger cars were turned out of the shops at Moncton repaired.
- 950 freight and 134 passenger cars were equipped with United States Safety appliances in compliance with instructions of the Interstate Commerce Commission.
- 596 F-36 triple valves were removed from freight cars and K-1 applied.
- 144 passenger cars were equipped with fire extinguishers.

The work of fitting passenger cars with emergency tool boxes was completed.

The following special work was commenced and is progressing:—

Installing the Bohn syphon refrigerator in 6 dining cars.

Changing the folding wash basins to one continuous nickeline washstand in four sleeping cars.

Changing marble washstand and dry hoppers to nickeline washstands and Duner flush closets in five parlour cars.

Changing bracket lamps in dining cars from upright to turn down brackets.

The following rolling stock received general repairs:—

879 freight cars.	31 vans.
1 tool car.	17 flangers.
43 ploughs.	3 auxiliary.
7 baggage.	10 first class.
3 colonist.	5 sleeping.
5 postal.	9 second class.
1 dining.	1 official.

The following cars received ordinary repairs:—

864 freight.	24 vans.
2 boarding cars.	1 store.
7 dining.	21 sleeping.
10 parlour.	80 first class.
14 second class.	30 colonist.
20 baggage.	11 postal.
1 official.	1 combination.

SESSIONAL PAPER No. 20

The following cars received minor repairs:—

25 sleeping.	122 first class.
48 colonist.	55 second class.
22 baggage.	5 dining.
14 postal.	16 official.
2 parlour.	3 bridge cars.
60 vans.	1 auxiliary.
12,651 freight cars.	

The following cars were burnt off, primed, filled, rubbed, coated, lettered and varnished:—

14 sleeping,	8 first class,
5 dining,	4 second class,
6 parlour,	1 colonist.

The following cars cleaned, cut in, and varnished:—

12 sleeping,	2 dining,
3 parlour,	78 first class,
22 second class,	30 colonist
15 postal,	26 baggage,
3 official,	1 auxiliary.

The following rolling stock painted, lettered and varnished:—

32 vans,	14 refrigerator,
7 snowploughs,	4 flangers,
18 boarding cars,	1 steam shovel,
357 box cars,	181 flat cars,
4 ash cars,	12 Hart-convertible cars,
15 Hart-Otis steel dump cars,	14 stock cars.
3 tank cars,	2 box baggage cars,
3,739 freight cars relettered and touched up.	167 engines and tenders were painted, lettered and varnished.

A number of freight trucks, baggage trucks, window sashes, doors, safes, desks, ladders, chairs, stepping boxes, tool and outfit boxes, wheel barrows, sign boards, gangways, smokestacks, and several smaller articles were painted and lettered.

Cabinet Shop—

The following articles were made:—

3 office railings and gates,	1 baggage skid,
13 sliding boards,	3 battery boxes,
1 emergency stretcher and box,	75 picture and mirror frames,
4 timekeepers' boxes,	12 switch connection boxes,
11 outfit boxes,	18 candle holders,
2 meat boards,	13 seat divisions, bottoms and backs,
28 sign boards,	4 tool chests,
147 car window sashes,	25 step ladders,
8 desk sashes,	4 letter racks,
2 car berths,	18 office desks, flat tops,

Cabinet Shop—Continued.

2 office desks, roll tops,	4 large wardrobes,
22 tables,	9 large filing cases,
60 car doors,	15 dry car hoppers,
2 screen doors and frames for official cars,	2 cupboards for official car,
1 press stand,	1 large folding table,
2 cabinets,	2 black boards,
57 window sashes,	4 large office glass partitions 200 lights,
129 hammer and brush handles,	7 desk drawers,
2 car gates,	78 ballast boxes,
7 small nests of drawers,	14 wash basin fronts for cars,
24 shelves,	8 partitions for general offices,
49 steam regulation notices framed and glazed,	7 large drawing tables,
1 art sash,	7 large vault cases for general offices,
17 packing boxes,	13 wind shields,
11 large work benches,	27 winnow screens,
40 inlaid panels,	17 end panels,
21 stools,	32 head boards,
9 office doors,	6 office door frames,
1 large case for Comptroller's office,	2 plaster hocks,
3 closet doors,	1 sliding window sash,
3 partitions in mail car,	1 flag pole,
	2 screens,
	2 garbage boxes.

In addition to the above a number of small articles were manufactured, such as watchman's clock key boxes, towel rollers, office directory boards, train bulletin boards, office chair bottoms, drawers, trays, knife boxes, holders, ink stand bottoms and various small articles.

The following articles were repaired:—

60 chairs,	4 seat ends,
75 car doors,	4 reversible tables,
22 ordinary tables,	2 blue print tanks,
61 window sashes,	19 office doors,
10 desks,	4 filing cases,
4 nests of drawers,	10 head boards,
1 wardrobe,	10 sliding doors,
4 end panels,	1 large blue print rack,
4 letter head cases,	1 hose cart wheel,
6 advertising frames,	1 small bureau.
1 travelling ladder for general office	

A lot of work was also done repairing clothes closets, office stools, door checks, general manager's house, traffic manager's house, general superintendent's house, Moncton station restaurant and new wing of general offices.

Freight car repair shop—(In addition to the ordinary repairs.)

- 589 new roofs were applied to freight cars.
- 189 cars were equipped with Acme levers.
- 42 new freight car trucks were built.
- 1 Sterlingworth truck was re-enforced.
- 1 snow plough was equipped with Westinghouse air brake.
- 3 snow ploughs were equipped with M.C.B. couplers.
- 6 box cars were lined for carrying potatoes.

SESSIONAL PAPER No. 20

The following work was done in the Upholstering Shop:—

Heavy repairs consisting of renewals, upholstering, carpets, mattresses, blinds and general cleaning in the following cars:

7 dining,	8 sleeping,
13 colonist,	2 parlour,
1 official,	10 first class.

Medium repairs were made to seats and backs, floors and interior washed, mattresses, seats and backs and carpets vacuum cleaned, and parts of seats and backs and blinds renewed in the following cars:—

2 sleeping,	1 dining,
4 parlour,	1 official.

Light repairs were made to seats and backs, mattresses, carpets and wicker chairs were repaired and patched in the following cars:—

51 first class,	20 colonist,
1 dining,	1 parlour,
9 sleeping,	2 official.

225 mattresses and pillows were made.

192 van cushions and seat backs were made.

120 water hose bags were made.

800 cab seats and backs were made.

1,037 engine curtains were made.

Repairs were also made to the upholstering of office chairs, office desks were covered with morrocoline, copper steam pipes were lagged with asbestos, vestibule dust curtains were repaired, window lifts were covered with plush, stepping boxes and small stepping ladders re-covered with plush, office stools were upholstered, chairs were re-covered with leather and plush, sleeping car portiers and mattresses were repaired and a number of smaller jobs were done.

The following material was manufactured on the wood-working mill:—

511 brake beams.	1,116 buffer blocks.
1,300 draft timbers.	390 truck sides.
355 truck bolsters.	338 spring boards.
73 pilots.	
4,008,044 feet of lumber milled.	

1,882 shops orders were completed and delivered to Stores Department.

Rivière du Loup Shops—

The following regular work was done during the year:—

42 locomotives received general, 1 heavy, 12 light and 32 specific repairs

1,873 new boiler tubes were applied.

9,128 boiler tubes were pieced.

46 fire boxes were patched.

108 boilers were tested.

143 pairs driving tires were turned off.

49 pairs engine truck tires were turned off.

172 pairs tender truck tires were turned off.

4 new trailing wheels were applied.

1 new engine truck was applied.

1 cab was made.

Rivière du Loup Shops—Continued.

- 26 pilots were made.
- 1 tender frame was made.
- 18,679 bolts were forged.
- 91,052 bolts were screwed.
- 13,302 studs were screwed.
- 46 engines and tenders were painted.
- 51,784 lbs. brass castings were made.
- 3,040 sets metallic piston rod packing were made.
- 5,767 sets metallic valve stem packing were made.
- 49,258 lbs. iron forgings were made.
- 455 driving springs were repaired.
- 95 engine truck springs were repaired.
- 97 tender truck springs were repaired.
- 16 new engine truck springs were made.
- 29 new driving springs were made.

A large number of cars were given light repairs, and various jobs were done for other departments of the railway.

Halifax Shops—

The following regular work was done during the year:—

- 6 locomotives received light repairs.
- 40 locomotives received specific repairs.
- 712 new boiler tubes were applied.
- 3 fire boxes were patched.
- 18 boilers were tested.
- 5 driving tires were turned off.
- 4 engine truck tires were turned off.
- 5 tender truck tires were turned off.
- 2 new main rods were applied.
- 2 new side rods were applied.
- 5 new pilots were made.
- 10,880 bolts were forged.
- 13,650 bolts were screwed.
- 1,340 studs were screwed.
- 11 engines and tenders were painted.
- 100 sets metallic piston rod packing were made.
- 40 sets metallic valve stem packing were made.

The following new machinery was installed:—

- 1 42-inch car wheel lathe with motor and hoist.
- 1 42-inch car wheel boring machine with motor and hoist.
- 1 double-axle lathe with motor and hoist.
- 1 48-inch car wheel press, with motor and hoist, with tracks, trucks, cranes, etc.
- 1 tool grinder.

SESSIONAL PAPER No. 20

PRINCE EDWARD ISLAND RAILWAY.

The following is a summary of the principal work performed at the shops of the Prince Edward Island Railway at Charlottetown:—

Locomotive Shops—

Thirteen locomotives received thorough general repairs.

Eleven locomotives received side and main rod brasses.

All the motion and running gear thoroughly examined, staybolts in boilers thoroughly examined, and five hundred and sixteen new staybolts put in boilers.

Sixty locomotives received specific repairs.

Eight locomotives received new pistons and twelve piston rods.

Six tender tanks and six tender frames were largely rebuilt.

Three foreboxes were patched.

Six crossheads were made and twelve were tinned and planed, three engine frames were rewelded.

The following new parts were supplied:—

Twenty truck boxes, twelve driving boxes, six whistles, thirteen pops, twenty pop valves, twenty-four valve stems, twenty slide valves, three hundred and seventy-five sets metallic packing, twenty cylinder cocks, four blow-off cocks, forty punches, six smoke stacks, one hundred and twenty-five truck straps, six truck bolsters, forty brass valve spindles, ten valve yokes, four bell ringers, twenty check valves, twenty-four taps, eight crank pins, twenty injector spindles, six steam pipes, six throttle glands and valves, thirty engine springs, and one driving axle.

One hoisting engine fitted out and thirty injectors repaired.

Seventy-five oil cups, twenty grease cups, twenty piston rod oil cups, twelve slush boxes, twenty-four slide blocks, twenty-six air pump cylinders, sixty brake levers, twenty-five brake jaws, four hundred and fifty brake pins and two hundred and fifty brake bolts were bored and fitted out.

Thirty-four sets driving wheels, thirty sets truck wheels, one hundred and twenty sets steel wheels, and ninety new axles were turned off. One hundred and ten sets wheels were pressed on axles. Five hundred and twenty-six new tubes were welded and put in boilers. Seventy thousand pounds of iron and four thousand, one hundred and fifty-one pounds of steel were forged; four thousand, one hundred and sixty pounds of nuts were tapped, and a great deal of running repairs too numerous to mention.

Car Shops—

Five box cars, five flat cars, one stock car, one snow plough and two engine cabs were repaired and charged to revenue.

The following received heavy repairs:—

Twenty-seven first class cars, fourteen second class cars, ten postal and baggage cars, one hundred and fifty-one box cars, thirty-five flat cars, five snow ploughs, four flangers and one van.

The following received light repairs:—

Fourteen first class cars, seventeen second class cars, thirteen postal and baggage cars, thirty-eight box cars, seventy-three flat cars, one snow plough and four flangers.

Nine cars were resheathed.

Ninety-six oil boxes, twenty-eight brake spindlers, twenty-three brake beams, twenty-four sashes, twenty-eight doors, twenty-six truck frames, thirty-eight truck

5 GEORGE V., A. 1915

bolsters, ten buffers, five hundred and twenty car frictions, twenty-seven sets car housings and five hundred and forty car castings were made. One hundred and forty-eight wheels, forty-eight new roofs and thirty-four new floors were put on cars.

Brass Foundry—

Output, 16,890 pounds of brass castings.

Copper Shop—

Forty headlights, thirty-five discharge pipes, ten copper pipes, six elevator pipes, four oil pipes, four injector pipes, twenty-nine train lamps, fifteen station lamps, twelve passenger car lamps, three semaphore lamps, two conductor's lamps, four tank spouts, one pump, four car baskets, one hundred and ninety oil cans and forty-five water cans were repaired.

Ninety engine truck funnels, twenty-six wire joints for steam chests, nineteen water glass shields, three feed pipes, four sand pipes, two oil pipes, two smoke stacks, and two zinc boxes for machine shop were made.

Lead lined forty car bearings and zinc lined seven ice boxes.

Twenty driving boxes, forty truck boxes and four truck brasses were babbitted.

Twelve crossheads and eleven sets rod brasses were tinned.

Copper pipes on fifteen engines softened and examined.

Repaired lagging on eighteen boilers and piped from injectors to ashpan in twenty-two engines.

Paint Shop—

Eleven locomotives were painted and varnished.

Sixteen first class cars were cleaned and eleven varnished, three postal and baggage cars were painted, eight cleaned and eight varnished; two second class cars were painted, seven cleaned and seven varnished, forty-five box cars were painted; one hundred and thirty-five box car roofs were painted; thirty-five flat cars, eight snow ploughs, four flangers, twenty-three hand cars, one refrigerator car, one oil tank, twenty-five water cans, seventeen loading platforms, sixty track levels, thirteen outside sashes and eight flag poles were painted. Eight sets outside sashes varnished; three desks, one table and four ticket cases filled and varnished; twenty-nine settees, four tables, fourteen seats, four letter cases, four ticket cases and four desks stained and varnished. Two stations, two offices and Charlottetown station roof painted.

Thirteen sashes glazed, forty-seven sign boards lettered, ninety box cars relettered and three hundred and thirty-six panes of glass put in buildings.

Work done for the road and traffic departments:—

Thirty loading platforms, eleven freight trucks, one coal hoist, seven cattle loaders, three sheep loaders, three baggage trucks, thirteen coal boxes, six storage boxes, three clothes boxes, three tool boxes, thirty-two doors, thirteen sign boards, two bill boards, three lamp stands, two grind stone stands, four tables, one telegraph table, four ticker cases, four book cases, four desks, twenty-nine settees, two wheelbarrows, fourteen track levels, twelve switch targets, three ladders, one hundred pocket staples, three posthole diggers, six hundred rail braces, twenty-four gate hinges, forty-seven cold chisels, forty picks, five switches, sixty switch rods, sixteen switch headers, twenty switch cranks, thirty pairs fish plates, fourteen frogs, thirty-two clawbars, seven push cars, eight windows and sashes, and seven drawers were made.

Eight hand cars were rebuilt. Air compressor thoroughly repaired.

One hand truck, seven freight trucks, four baggage trucks, four hand cars, seven trollies, eight doors, eighty picks, twelve clawbars, sixteen switch cranks and one turntable were repaired.

The steam shovel was repaired. New tubes were put in boiler, and engine and dipper repaired.

SESSIONAL PAPER No. 20

GOVERNMENT RAILWAYS.

LEGAL AND CLAIMS DEPARTMENT.

MONCTON, N.B., July 13, 1914.

SIR,—The legal and claims department of the government railways is of recent organization and the records date from January 1 last past; I have therefore the honour to submit herewith my report on the said department for the period from the 1st day of January last past to the end of the fiscal year, namely, March 31, 1914.

Prior to the organization of this department the legal and claims work was conducted between the head office of the railway at Moncton, New Brunswick, and the Department of Railways and Canals at Ottawa, but under the present system all such work is now conducted at the head office of the railway and with a result of bringing the various departments in close communication in respect of such work and to the general advantage of all such departments.

Complete records of railway documents and all other railway legal data and of all claims for and against the railway are being compiled to date and will thereafter be supplemented under a modern system of filing and registration.

Legal documents are prepared in the department of claims disposed of in immediate communication with the various officials of the departments concerned.

I enclose herewith tabulated statements of legal documents entered into by the railway within the period covered as aforesaid:—

(1) Contracts and agreements entered into by the Intercolonial Railway and Prince Edward Island Railway.

(2) Property leased by the Intercolonial Railway and Prince Edward Island Railway.

(3) Property leased to the Intercolonial Railway and Prince Edward Island Railway.

(4) Property conveyed to the Intercolonial Railway and Prince Edward Island Railway.

Within the period covered by this report claims (other than traffic department claims) filed against the railway in the aggregate of \$24,963.21 have been settled in the total for \$15,775.64, all of which settlements have been effected upon a reasonable basis and with as prompt despatch as the cases would permit covering claims outstanding on January 1 last and claims between said date and March 31 as aforesaid.

The above is respectfully submitted.

Yours truly,

H. F. ALWARD.

F. P. GUTELIUS, Esq.,
General Manager,
Government Railways,
Moncton, N.B.

5 GEORGE V., A. 1915

CONTRACTS AND AGREEMENTS entered into by Intercolonial Railway and Prince Edward Island Railway from January 1 to March 31, 1914.

Number.	Date.	Contractor.	Description.
1914.			
7112	Jan. 8.	K. A. Morrison.....	Construction of substructure of a bridge over brook near Covered Bridge Station, N.B.
7113	" 8.	Dominion Bridge Company, Limited.	Erection of following bridges—Becancour River, crossing over N.T.R., Rivière du Sud bridge, Rivière du Loup bridge.
7114	" 8.	Baird & Howie.....	Construction of substructure of a bridge over Nashwaak River.
7115	" 20.	Hall Switch & Sig. Co., Limited....	Installation of a telephone train despatching line between Moncton and St. John, N.B.
7116	" 22.	McDonald & McIntosh.....	Construction of substructure of a bridge over West River at Antigonish, N.S.

INTERCOLONIAL AND PRINCE EDWARD ISLAND RAILWAYS.

EMPLOYEES' PROVIDENT FUND.

SEVENTH ANNUAL REPORT.

MONCTON, N.B., May 30, 1914.

To all Officers and Employees, Contributors to the above Fund:

GENTLEMEN,—By instruction of the Provident Fund Board we beg to submit for your information the following report of the operations of the Provident Fund for the fiscal year ended March 31, 1914.

The personnel of the Provident Fund Board for that year was as follows:—

F. P. Gutelius, general manager, Canadian Government Railways, chairman, Moncton, N.B.

Appointed by the Minister.

T. C. Burpee, Engineer of Maintenance, I.C.R., Moncton, N.B.

D. McDonald, Superintendent, I.C.R., Lévis, Que.

Elected by the Employees.

Willard P. Hutchinson, train despatcher, I.C.R., Moncton, N.B.

Bliss A. Bourgeois, chief clerk, I.C.R., Moncton, N.B.

Four regular meetings of the Board, as required by the regulations, were held during the year.

The following is a statement of the Receipts and Expenditures during the year ended March 31, 1914:—

Balance at the Credit of the Fund on the 31st March, 1913	\$ 346,028 57
The Contributions made by Employees during the year, being one and one-half per cent of their monthly salary and wages, were.....	\$ 99,805 03
The Contributions made by the Railways, of an equal amount during the same period, were.....	99,805 03
	199,610 06
Amount received for Refunds, etc.....	1,236 00
Interest accrued (at three per cent).....	*10,048 32
	\$ 556,922 95
The Expenditures were:	
For retiring allowances.....	\$ 152,674 81
For contributions refunded in cases of deceased employees.....	3,708 02
For contributions refunded, which were deducted in error.....	335 98
For contributions refunded to discharged employees, etc.....	2,325 75
Medical Examinations for probationers entering service, etc.....	2,808 00
Medical Examinations for employees retiring from service.....	87 00
For Election Expenses.....	583 19
For Salaries and Travelling Expenses, Secretary's Office.....	3,961 43
For Board Members—Time Lost and Travelling Expenses.....	15 19
For Stationery, Printing, Postage, etc., etc.....	1,201 82
	\$ 167,701 19
Balance to the credit of the Fund on the 31st March, 1914	\$ 389,221 76

The following statement shows the amount which was contributed by the railways, and the amount which was contributed by the employees to the Provident Fund, in each fiscal year, since the fund has been in operation. It also shows the number of employees retired, the number of deaths among the same, and the amount

\$43.86 of this amount was earned last year, but was not credited until this.

SESSIONAL PAPER No. 20

paid for retiring allowances in each year. The average amount of the retiring allowances, paid in the month of March in each year, is also shown.

For Fiscal Year.	Amount contributed by Railways.	Amount contributed by Employees.	No. of Employees placed on Fund.	No. of Retired Employees Died.	Amount Paid for Retiring Allowances.	Average Monthly Allowance Paid in March.	Balance at Credit of Fund.
1907-8.....	\$82,707 74	\$82,707 74	142	11	\$23,913 04	\$25-49	\$139,249 21
1908-9.....	75,306 41	75,306 41	88	17	64,067 63	25 63	225,898 31
1909-10.....	69,949 70	69,949 70	168	17	103,628 20	26 30	255,585 08
1910-11.....	71,296 42	71,296 42	51	23	121,014 34	26 56	273,480 01
1911-12.....	81,119 81	81,119 81	29	23	125,131 32	26 04	309,234 71
1912-13.....	85,365 23	85,365 23	63	36	133,539 69	26 78	346,028 57
1913-14.....	99,805 03	99,805 03	108	37	152,674 81	27 37	389,221 76

It will be noted by the above statement of Receipts and Expenditures that the amount of the contributions received from the Railways and from the Employees during the year, were..... \$199,610 06
 And the Expenditures were..... 152,674 81
 Surplus of Contributions over Expenditures..... \$46,935 25
 The gross surplus, including interest, to the credit of the Fund on March 31st, 1914, was..... \$389,221 76

The Act provides that two members of the Provident Fund Board shall be elected annually, and it was therefore necessary in January, 1914, to arrange for the election of these two members to serve during the year ending March 31, 1915.

Notice calling for the nomination of candidates was accordingly posted as required by the rule, and the election was held in February, 1914.

The two members elected were:

- Bliss A. Bourgeois, chief clerk, I.C.R., Moncton, N.B.
- Willard P. Hutchinson, train despatcher, I.C.R., Moncton, N.B.

Since the last annual report was issued, Mr. T. C. Burpee, one of the members of the Board appointed by the minister, has been retired from the service, and Mr. D. McDonald, the other member of the Board appointed by the minister, has been transferred to another position, and it was, therefore, necessary for the minister to appoint two other officials as members of the Board.

The personnel of the Board as at present constituted is as follows:—

- E. P. Gutelius, general manager, Canadian Government Railways, chairman, Moncton, N.B.

Appointed by the Minister.

- S. L. Shannon, comptroller and treasurer, Canadian Government Railways, Moncton, N.B.
- H. H. Melanson, general passenger agent, Canadian Government Railways, Moncton, N.B.

Elected by the Employees.

- Willard P. Hutchinson, train despatcher, I.C.R., Moncton, N.B.
- Bliss A. Bourgeois, chief clerk, I.C.R., Moncton, N.B.

F. P. GUTELIUS,
Chairman.

W. C. PAVER,
Secretary.

PART IV.

Report of the Government Chief Engineer of the
Western Division of the National Trans-
continental Railway.

MR. COLLINGWOOD SCHREIBER, C.M.G.

Office of the General Consulting Engineer to the Government and Chief Engineer of the Western Division of the National Transcontinental Railway.

ROOM No. 150 WEST DEPARTMENTAL BUILDING,

OTTAWA, April 1, 1914.

The Honourable

Frank Cochrane,

Minister of Railways and Canals,

Ottawa, Ont.

SIR,—I have the honour to submit my annual report for the fiscal year ended the 31st of March, 1914, upon the progress made with the works of construction of the western division of the National Transcontinental Railway.

WESTERN DIVISION.

This division extends westward from the western boundary of the Winnipeg joint terminals to the City of Prince Rupert, the Pacific Coast terminus.

For construction purposes, this division is divided into two sections, viz.:—

The "prairie section" extending from Winnipeg to Wolf Creek, a distance of 915 miles.

The "mountain section" commences on the east bank of Wolf creek, running westerly to the city of Prince Rupert, a distance of 830 miles, with terminals around the water front of the city for a further distance of 3.23 miles.

PRAIRIE SECTION.

Very little work has been executed since the period covered by my last annual report towards completing this section. What has been done was mainly for the maintenance of the permanent way, roadbed, buildings and structures, etc., expenditure on which during construction is, under the terms of the agreement with the company, dated July 29, 1913, chargeable to capital account.

The structural works are principally of timber, viz.:—197 wooden bridges and 1,687 wooden culverts.

The permanent structures of steel and concrete are eleven in number, viz.:—

Spans.

Assiniboine river at Winnipeg..	One 90-foot, four 80-foot, one 44-foot.
“ east of Portage la	
Prairie..	Two 88-foot, one 250-foot.
Arrow river..	One 43-foot 5 inches.
Assiniboine river at Lazare.. . .	One 250-foot.
South Saskatchewan river.. . . .	Five 225-foot, one 175-foot, one 125-foot.
Eagle river..	One 60-foot.
Battle river..	One 150-foot, one 70-foot, fifty-one 50-foot.
North Saskatchewan river.. . . .	Three 225-foot, two 150-foot, ten 50-foot, four 40-foot.
Saskatchewan trail..	One 77-foot.
Norton road..	One 78-foot.
Pembina river..	One 240-foot, two 210-foot, four 60-foot.

The road is equipped with the necessary passenger stations, freight sheds, section houses, bunk houses, water tanks, round houses, machine shops, coaling plants, stock yards, loading platforms and siding accommodation.

There is one overhead crossing of another railway, and twelve crossings of other railways at rail level which are protected by interlocking plant.

A well equipped train service, both passenger and freight, has been in successful operation over the entire section during the past fiscal year, which I understand has been much appreciated by the travelling public, and has proved a great accommodation to the settlers along the line.

The rolling stock of the passenger trains is of the most modern design, well served and efficiently maintained.

MOUNTAIN SECTION.

The works of construction on this section have been energetically carried on during the past fiscal year.

Although the grading is sufficiently advanced to enable the steel ends to be connected within the next few days, giving a rail trackage from Winnipeg to Prince Rupert, the road is far from being finished, temporary lines being constructed around some unfinished cuttings, and in one instance, a track is laid on a 2 per cent grade over an unfinished cutting. It will probably take a couple of months to complete these cuttings. When completed, the track will be laid through them on the permanent line.

Several pile bridges have yet to be filled by train, and owing to the treacherous nature of the soil (a blue hard wet clay) many slides are likely to occur, from time to time, both in the cuttings and embankments, which will cause more or less inconvenience and trouble, and add very considerably to the cost of construction.

There are 13 tunnels, one of which is not completed, but is "shoo flied." Eleven have been lined with concrete for an aggregate length of 6,162 feet.

The structural works embrace 1,388 wooden culverts, 197 wooden bridges and 59 steel bridges.

The culverts and wooden bridges are all built, but only 38 of the steel bridges are completed, viz:—

	Spans.
Wolf creek	Two 40-foot, two 50-foot, three 150-foot.
McLeod river	Two 40-foot, two 70-foot, four 210-foot.
Prairie creek	Nine 50-foot, five 70-foot.
Fiddle creek	One 150-foot, two 225-foot.
Rocky river	One 225-foot.
Athabasca river	Three 225-foot.
Snaring river	Two 225-foot.
Boulder creek	One 60-foot.
Miette river No. 1	One 225-foot.
" No. 2	One 80-foot.
Grants creek	One 66-foot.
Moose river	One 125-foot.
Fraser river No. 1	One 40-foot, one 70-foot, one 175-foot.
Glazier creek	One 90-foot.
McLennans creek	Two 70-foot, one 100-foot.
Sand creek	One 125-foot.

SESSIONAL PAPER No. 20

	Spans.
Little Shuswap river.	One 125-foot.
Rau Shuswap river.	One 30-foot, seven 40-foot, eight 60-foot, one 180-foot.
Cottonwood creek.	One 125-foot.
50 Mile creek.	One 125-foot.
Goat river.	Two 150-foot.
Dome creek.	One 125-foot.
Willow river.	Two 225-foot.
Fraser river No. 2.	Three 225-foot.
Telkwa river.	One 225-foot.
Trout creek.	One 40-foot, one 50-foot, one 70- foot, one 150-foot.
Boulder creek.	One 50-foot, three 70-foot, one 150-foot, two 210-foot.
Porphyry creek.	Five 40-foot, nine 70-foot.
Mud river.	Five 40-foot, six 60-foot.
Sealey gulch.	Seven 40-foot, eight 70-foot.
Skeena river.	Three 70-foot, three 240-foot.
Kitsumkalum river.	One 225-foot.
Zim-a-cord river.	One 225-foot.
Ecstews river.	One 175-foot.
Ex-chom-siks river.	One 225-foot.
Ka-its-siks river.	One 225-foot.
Kyax river.	One 40-foot.
Zanardi rapids.	Three 55-foot, two 125-foot, one 225-foot.

There are eleven more steel bridges under construction as follows:—

	Spans.
Fraser river No. 3.	One 225-foot, three 250-foot.
“ “ 4.	One 100-foot, ten 200-foot, two 250-foot.
Nehaco river.	Three 225-foot.
Bulkley river No. 1.	One 150-foot.
“ “ 2.	Four 88-foot.
Kitwangar river.	One 150-foot.
Porcupine river.	One 80-foot.
Lorne creek.	One 90-foot.
Hardserabble creek.	One 99-foot.
Phillip's creek.	One 52-foot.
Shames river.	One 66-foot.

In addition to which there are ten steel bridges the construction of which is not yet commenced, viz.:—

	Spans.
Stony creek.	One 99-foot.
Mud river.	Two 80-foot.
Endaco river No. 1.	One 250-foot.
“ “ 2.	One 60-foot.
Prince creek.	One 66-foot.
Ksi-den creek.	One 60-foot.

5 GEORGE V., A. 1915

Streams.	
Ford creek	One 50-foot.
Sand creek	One 66-foot.
Fiddlers creek	One 90-foot.
Kitsunkaylun river (additional span)	One 150-foot.

To the meantime the trains are crossing these streams on temporary pile bridges.

A large quantity of rip-rap has been placed on the slopes of the embankments that are subjected to the wash of the waters of the several rivers and lakes, and much more has to be done in that direction before the work is complete.

The following are the numbers and nature of buildings erected or in course of erection, viz.:

2 warehouses.	75 station houses.
16 section houses.	3 coaling plants.
3 round houses.	9 bunk houses.
1 carpenter shop.	14 water tanks.
74 tool houses.	3 machine shops.

With the exception of a gap about 16 miles, the track is laid throughout the "Mountain Section," with the necessary siding accommodation at the stations.

The track for a distance of 630 miles has received a lift of ballast, leaving only 200 miles of skeleton track.

In so far as the terminals at Prince Rupert are concerned, nothing has been done excepting the grading, laying down of a few sidings and the construction of a dock.

It is a great satisfaction to me to be able to report that the Government Inspecting Engineers have faithfully and diligently performed the duties of their office. The work is now, however, so far advanced towards completion, that the services of four out of the six will be dispensed with at the end of May next, and I shall be pleased if their record on this railway should result in the early utilization of their services on some other Government work.

I have the honour to be, Sir,
Your obedient servant,

COLLINGWOOD SCHREIBER,

*Chief Engineer Western Division National
Transcontinental Railway.*

PART V.

QUEBEC BRIDGE RECONSTRUCTION.

REPORT OF CHAIRMAN OF BOARD OF ENGINEERS.

BOARD OF ENGINEERS, QUEBEC BRIDGE.

MONTREAL, June 19, 1914.

SIR,—I beg to report progress of work on the construction of the new Quebec bridge for the fiscal year ending March 31, 1914, as follows:—

Substructure.—During the past year Messrs. M. P. and J. T. Davis, the contractors for the substructure have completed the construction of the masonry embraced in their contract, except such work as cleaning and pointing the courses and dressing the bridge seats.

Following are the quantities of work covered by this contract: —

North abutment (alterations)	404.05	cu. yds.
North intermediate pier	1,665.06	“ “
North anchor pier	17,736.00	“ “
North main pier	31,870.04	“ “
South main pier	38,279.04	“ “
South anchor pier	16,073.00	“ “
South abutment (alterations)	61.01	“ “
Total	106,090.00	“ “

The work of construction was started in the spring of 1910, but no masonry was laid until 1911

The work performed each year is as follows:

Season of 1911	22,405	cu. yds.
Season of 1912	41,459	“ “
Season of 1913	42,226	“ “
Total	106,090	“ “

This masonry is all faced with heavy granite blocks with a backing of concrete. The main piers have 18 feet of solid granite on the top of each pier, in order to distribute the heavy loads to all portions of the pier. The anchor piers, which are about 140 feet high above ground line, have heavy steel grillages embedded in their bases, which, when connected to the trusses will act as an anchorage for the cantilever spans. The two wells have been left open in each of these piers to enable this connection to be made at the proper time.

The abutments, intermediate pier, south main and both anchor piers are founded on solid rock. In the case of the south main pier the foundations were carried down 86 feet below the bed of the river and 101 feet below extreme high water. It was the original intention to carry the north main pier down to rock, but during the sinking of the caisson the river bed was found to be a solid mass of boulders for the entire depth. When the caissons had been sunk to a depth of about 55 feet below the river bottom, tests were made in this material, the results of which showed that it was capable of sustaining from eight to ten times the load required. It was therefore decided to stop the sinking at this elevation—about 20 feet above rock.

This masonry has been subject to very careful and rigid inspection, and the work as a whole is very satisfactory.

The contractor is now engaged in cleaning the masonry, removing his plant, and generally cleaning up the site. This work should be entirely completed by the end of the present season.

5 GEORGE V., A. 1915

Superstructure.—During the past year steady progress has been made in the manufacture of the bridge members at the shops of the St. Lawrence Bridge Company. Up to March 31, 1914, the status of the work was as follows:—

Raw material ordered from the mills.	29,356 tons.
Raw material received at the shop.	24,741 “
Finished bridge members manufactured at shop ..	9,991 “
Members delivered at bridge site.	7,484 “
Steel erected and partially riveted.	1,371 “
Material completely erected.	791 “
Estimated total weight required	65,000 “

Owing to the contractors having to start with a new shop and a new organization, progress in this respect has not been as rapid as was hoped, but from now on it is expected that they will be working to full capacity, or in the neighbourhood of about 2,000 tons per month.

In the field the contractor has also been busy, and when the season opens in the spring expects to start on the erection of the cantilever bridge proper. The approach spans from the abutments to the anchor pier have already been erected. All the falsework required for the erection of the anchor arm has been manufactured and shipped to the site. The 1,000-ton erection traveller is practically completed and is expected to start operations some time in May. It is expected that the greater part of the anchor arm, or some 10,000 tons, will be erected this season. Duplicate falsework and duplicate traveller for the south side are now under construction and will be erected as soon as possible on that side of the river. Next year it is expected that erection will take place simultaneously on both sides.

Shop drawings for over half the bridge have been prepared and approved. This part of the work is advanced to such an extent that it is away ahead of the requirements of the shop.

All of which is respectfully submitted.

C. N. MONSARRAT,
Chairman and Chief Engineer.

Hon. J. D. REID,
Acting Minister of Railways and Canals,
Ottawa, Ont.

PART VI.

REPORT OF THE CHIEF ENGINEER OF THE DEPARTMENT

AND

Reports of the Superintending Engineers, Engineers in Charge, and Superintendents of the various Canals, the Engineer in Charge of the Car Ferry Terminals at Cape Tormentine, the Chief Engineer of the Hudson Bay Railway, the Engineer in Charge of the Hudson Bay Railway Terminus at Port Nelson, and the Engineer in Charge of the Dartmouth-Deans Branch of the I.C.R.

FOR THE YEAR 1913-14.

Ernest Marceau, Superintending Engineer, Quebec Canals.
C. D. Sargent, Superintending Engineer, Ontario-St. Lawrence and St. Peter's Canals.
A. T. Phillips, Superintending Engineer, Rideau Canal.
A. J. Grant, Superintending Engineer, Trent Canal.
A. L. Killaly, Acting Superintendent, Trent Canal.
J. L. Weller, Engineer in Charge, Welland Ship Canal.
L. D. Hara, Acting Superintending Engineer, Welland Canal.
J. W. LeB. Ross, Superintending Engineer, Sault Ste. Marie Canal.
F. B. Fripp, Engineer in Charge, Car Ferry Terminals, Cape Tormentine.
J. W. Porter, Chief Engineer, Hudson Bay Railway.
D. W. McLachlan, Engineer in Charge, Hudson Bay Terminus, Port Nelson.
W. A. Hendry, Engineer in Charge, Dartmouth-Deans Branch, I.C.R.

OFFICE OF THE CHIEF ENGINEER.

OTTAWA, April 1, 1914.

SIR,—I have the honour to submit my annual report for the fiscal year ending March 31, 1914.

Attached hereto will be found the annual reports of the superintending engineers of the several canals, the superintendent of the Trent canal, the engineer in charge of the Welland Ship canal, the engineer in charge of the car ferry terminals at Cape Tormentine, the chief engineer of the Hudson Bay railway, the engineer in charge of the Hudson Bay Railway terminus at Port Nelson, and the engineer in charge of the Dartmouth-Deans branch of the Intercolonial railway.

CANALS.

The through water route between Montreal, at the head of ocean navigation, and Fort William and Port Arthur, on the west shore of Lake Superior, comprises 74 miles of canal with 48 locks, and 1,155 miles of river and lake waters, or a total 1,229 miles. The minimum depth of water on this route is 14 feet. From Montreal to Duluth on the southwest end of Lake Superior, the total distance is 1,354 miles, and to Chicago 1,286 miles. A summary of this route will be found in Part VII, together with details of the several works thereon. Connection is made with the Canadian Pacific railway for points west and south at Fort William and Port Arthur (six miles apart). From Fort William a branch of the Grand Trunk Pacific railway makes connection with the National Transcontinental Railway's main line to Winnipeg.

On this through route the approaches to the canals and the channels of the intermediate river reaches are well defined and are lighted with gas buoys under the control of the Department of Marine and Fisheries, admitting of safe navigation, in the hands of competent pilots, both by day and night. The Lachine, Soulanges, Cornwall, Welland and Sault Ste. Marie canals are lighted throughout with electricity and electrically operated. The Farran's Point canal is lighted with acetylene gas.

Of the minor systems, the Murray, Trent, Rideau, and Ottawa River canals may be considered geographically as branches of the through east and west route. In operation, however, these canals serve a distinct traffic of a more local nature. Isolated from the systems just mentioned, the navigation of the Richelieu river, from its junction with the St. Lawrence at Sorel to Lake Champlain, is effected by means of the St. Ours lock and the Chambly canal; while in the extreme east the St. Peter's canal provides communication between the Bras d'Or Lakes of Cape Breton island and the Atlantic Ocean.

Detailed information respecting the several canals is contained in an appendix.

With the exception of the Trent canal, where the construction of an extension of the present system to an outlet on Lake Ontario is still in progress, and the Welland Ship canal, fully described farther on in this report, the work executed during the past year has been almost wholly of the nature of improvements and repairs to existing works.

LACHINE CANAL.

The most important items of work during the past year have been the continuation of the rebuilding in concrete of the slope and vertical walls between Cote St. Paul and Lachine, which work is now nearing completion; improvements to Lock No. 4 including the rebuilding of a section of the south retaining wall; and the rebuilding of St. Gabriel Shed No. 1 on which the work is well advanced.

SOULANGES CANAL.

At the upper entrance to this canal foundations have been constructed for the breakwater, lighting pier and an extension to the guide pier. The excavation for a new channel which has been under way will, it is expected, be completed by the close of the present season. A small steel rolling bridge has been located over the entrance to regulating basin No. 1, replacing the former floating span.

CHAMBLY CANAL.

At LaRocque's Crossing a new steel swing bridge was erected replacing the former wooden structure. The wooden regulating weir at Foyer's point was replaced by a new concrete structure provided with steel sluices and other improvements. The system of electric lighting along this canal was completed in time for the opening of navigation. At the St. Ours lock three concrete boom piers were completed replacing the former wooden piers.

STE. ANNE'S LOCK.

The work of renewing in concrete the top of the upper pier between the locks was started and it is expected will be completed this season.

CARILLON AND GRENVILLE CANALS.

A portion of the cribwork in the apron of the submerged dam which had been carried away during the spring freshet of 1913 was renewed and lengthened.

BEAUHARNOIS CANAL.

Nine sections of dry wall, aggregating more than half a mile in length, were built along the shores of lake St. Francis, and a considerable portion of the existing walls was repaired.

CORNWALL CANAL.

A large amount of repair work was attended to during the past season such as the rebuilding of a portion of retaining wall, repairs to valves and gates, the renewal of a culvert at Mille Roches, painting steel bridges, etc. The more extensive improvements were the completion of the work started last season on the lower entrance to lock No. 15, where a safe and easy approach is now provided between the lock and the river with enlarged harbour facilities for waiting vessels. The work is also well under way on extensive improvements at the lower entrance to lock No. 20.

FARRAN'S POINT CANAL.

The lower entrance to this canal has been improved by the replacing of a portion of the old cribwork pier by a permanent concrete structure. The length of this pier has also been considerably increased and vessels can now make the entrance with much greater ease than had formerly been possible.

SESSIONAL PAPER No. 20

RAPIDE PLAT CANAL.

With the exception of a small amount of dredging the improvements to the lower entrance of lock No. 24 have now been completed. The canal at this point has been widened and straightened and an approach wall constructed on the north side of the entrance.

GALOPS CANAL.

To provide greater safety at lock No. 28 a contract has been let for the construction of a steel swing bridge which can be swung across the lock and from which a timber bulkhead can be lowered in the event of an accident to the gates. This bridge will be placed early in the coming season.

MURRAY CANAL.

The dredging of this canal to its original depth of 11 feet was completed early in the season. No other improvements of note were made during the year.

RIDEAU CANAL.

A large number of small repairs were attended to during the year such as the renewal of lock gates, pointing of masonry walls, painting of bridges and buildings, etc. Among the more extensive repairs and improvements should be mentioned the rebuilding of the ice-breaker cribs at Hogsback locks, the rebuilding of the upper of the three locks at Long island station, the taking down and rebuilding of the waste weir at Burritts' Rapids lock and the construction of a protecting crib at same point, the renewal in its original location of the retaining dam at Clowes lock, extensive repairs to the dam at Kilmarnoch lock, and the building of two lay-by piers at Poona-malie lock. Dredging of the Perth branch of the canal was carried on throughout the season. Satisfactory water levels were maintained during the entire period of navigation.

TRENT CANAL.

New construction is still in progress on this canal, but the extent of waterway open to navigation remains the same as in the previous year, namely, from Lake Simcoe to Heeleys Falls, sixteen miles east of Hastings.

On the portion of the canal in operation, in addition to numerous minor repairs, maintenance improvements of somewhat greater magnitude were also carried out, such as the rebuilding in concrete of the south end of the dam at Moore's Falls, the dredging of the channel of the Seugog river north of Lindsay, the construction of a small wharf at Atherley on Lake Simcoe, and the deepening of the canal to nine feet through the rock cut at Balsover.

The portion of the Trent canal now under actual construction lies between Trenton, at the westerly end of the Bay of Quinte, and the easterly end of Rice Lake, a distance of $56\frac{1}{2}$ miles. This portion of the canal is known as the Ontario Rice Lake division and for construction purposes has been subdivided into seven sections or contracts. The line of the River Trent has been followed throughout. When completed, this part of the system will comprise $9\frac{1}{2}$ miles of canal, 13 miles of sub-aqueous channels, and 34 miles of deep river. The total rise between the low water level of Lake Ontario and the normal navigation level of Rice Lake is 369 feet. This difference of level is to be overcome by 18 locks. For the control of the river and canal levels 14 dams will be required. At the end of the past fiscal year all the locks had been constructed and 10 of the dams. There will be required in all 18 bridges of which 15 have already been constructed. These bridges with one exception will all be of either the swing or bascule type. The locks are monolithic concrete 175

feet long and 33 feet wide providing a depth of 8 feet 4 inches of water on the sills, and will accommodate barges of 1,000 tons of about 150 feet long by 30 feet beam, drawing 8 feet of water. The entire work involved comprises the removal of about 1,500,000 cubic yards of earth and 1,250,000 cubic yards of loose and solid rock, and the placing of about 400,000 cubic yards of concrete. The approximate total cost has been estimated at \$6,750,000. Up to March 31, 1914 there had been expended for labour and material the sum of \$4,206,171.52. Complete details in regard to the foregoing will be found in the annual report of the superintending engineer which appears in the appendix hereto.

In addition to the various construction work already noted, considerable preliminary work and investigation have been done on the westerly or Georgian Bay end of the canal. This portion of the route, which lies between Lake Simcoe and Georgian Bay, is known as the Severn River division. A complete survey of this division has been made during the past two years from which plans have been prepared for the work of canalizing the river to the same dimensions as obtain on the Ontario Rice Lake division. After careful consideration of various possible outlets, South Honey Harbour has been adopted as the most satisfactory Georgian Bay terminus. The total length of this division will be 43 miles and will comprise when completed 4 miles of canal, $5\frac{1}{2}$ miles of subaqueous channel, and $33\frac{3}{4}$ miles of deep river and lake navigation. The fall between Lake Couchiching, the northerly arm of Lake Simcoe and Georgian Bay is about 140 feet, which difference of level will be overcome by 5 locks. The regulation of water levels in the river will be provided for by 13 concrete dams. The canal will be traversed by 8 steel bridges, four of which will be swing spans and the remainder fixed. The division has been divided for construction purposes into four sections, two of which are now under contract.

Hydrographic Surveys.—Various surveys have been made from time to time with a view to the future compilation of a reliable set of charts covering the chain of lakes included in the Trent canal system, and so far as the work has advanced the field work has been plotted. It is intended to continue these surveys during the coming season.

WELLAND SHIP CANAL.

The work on the new ship canal is divided into nine sections or contracts, numbered from the Lake Ontario end of the canal. Contracts have been let for sections Nos. 1, 2, 3 and 5, and for a portion of the work on section No. 4 known as section No. 4A. Sections Nos. 1, 2 and 3, extend over a distance of approximately nine miles, or from the Lake Ontario entrance to the canal, near Port Dalhousie, up to and through the town of Thorold, and include the construction of seven lift locks and the building of a short line of railway for the transportation of supplies during canal construction. Work on these three sections is now in progress. Section No. 5 includes the widening and deepening of the existing canal between Allanburg and Port Robinson, or for a distance of about two and one-half miles. The work upon this section has been progressing rapidly. Section No. 4A covers the construction of two reinforced concrete culverts between the old and new canals to replace the open ditches at present existing. Good progress is being made on this part of the work.

In the annual report of the engineer in charge, appended hereto, are given very complete and interesting details in connection with all the work now in progress and in addition to this there is a resumé from last year's report of the general scheme for and principal engineering features in connection with the entire canal.

WELLAND CANAL.

A large number of minor repairs and improvements were made on the canal during the past fiscal year. In addition to these the more extensive improvements include the replacing by reinforced concrete bridges of six old wooden spans at various points

SESSIONAL PAPER No. 20

along the old and new canals and the building of a number of smaller reinforced concrete bridges to carry pedestrian traffic.

PORT COLBORNE ELEVATOR.

During the year, the Government elevator handled 21,441,826 bushels of grain, an increase of 9,839,310 bushels over the quantity handled in the previous year. The net earnings for the year amounted to \$53,047.06 an increase of more than 100 per cent over the previous year's business. Since the erection of this elevator in 1908 the business handled by it has shown a steady and most satisfactory rate of increase.

SAULT STE. MARIE CANAL.

Repairs and improvements made on this canal during the past year include the dredging of a portion of the upper entrance, and the cleaning out of culverts, and general repairs to lock gates. A large lumber shed was erected at the easterly end of the canal grounds.

The freight traffic handled by the canal was the largest on record, aggregating 42,703,641 tons, an increase of 8 per cent over the previous year's figures. The report of the Superintending Engineer gives further traffic statistics of an interesting nature.

ST. PETER'S CANAL.

Work on the construction of the new lock at the Atlantic end of the canal was proceeded with during the past season. After some little steam shovel excavation had been done it was found that the nature of the foundation material encountered was very unsatisfactory and it was deemed advisable to discontinue work on this site. A new location for the lock has been chosen and it is likely that work will be started in this revised location during the coming season. To carry on this work it will be necessary to close the canal to navigation during the entire season. When the work is completed however, the operating facilities at the Atlantic entrance to the canal will be very greatly improved.

RAILWAYS.

CAR FERRY TERMINALS—NORTHUMBERLAND STRAITS.

This work comprises the construction of harbour works, landing piers, etc., at Cape Tormentine, N.B., and Carleton Point, P.E.I., distant 8 miles apart, and the building of about 3 miles of railway connecting the Cape Traverse Branch of the Prince Edward Island Railway with the Carleton Point terminal.

During the past season the dredging of the turning basin at Cape Tormentine was carried on, and considerable timber cribwork was erected. A large quantity of construction materials have been delivered at the site of the work. A considerable quantity of rubble stone will be required at Carleton Point, and a quarry has been opened at Pointe du Chêne, about 40 miles distant, from which an ample supply can be obtained. Thus far no actual work at the ferry terminal has been done. On the branch line railway, the right of way has been fully cleared, and excavation work started.

HUDSON BAY RAILWAY.

The bridge over the Saskatchewan river near Le Pas, which was mentioned in last year's report, has now been completed. Track is laid for the first 102 miles beyond Le Pas, 56 miles of this distance having been fully ballasted and surfaced. The right-of-way has been cleared up to the first crossing of the Nelson river, or for

a distance of 242 miles, and grading has been practically completed up to the 105th mile. Considerable survey work was carried on during the past winter with a view to bettering the alignment and reducing the cost of construction, and as a result several advantageous changes from the original location are now to be adopted. It is expected that rapid progress will be made during the coming season.

HUDSON BAY RAILWAY TERMINUS PORT NELSON.

A commencement was made in the work of development at this point. During the winter and spring, plant, materials, supplies and workmen were assembled, and shipped to Port Nelson on the opening of navigation. Some of the steamers employed proved unsuitable for the business, which in conjunction with delays of contractors in the furnishing of lightering plant resulted in great difficulty in handling cargoes. It was necessary that such arrangements for transportation, as were deemed expedient, should be concluded in the early spring; and thereafter, the total lack of communication left no opportunity for readjustment of plans to circumstances. As a result some cargo was brought back through inability to discharge. Two vessels were wrecked. The period, from the arrival of the first vessel until the laying up of floating plant for the winter, was so short that the greatest part of the forces were occupied in landing supplies. Before winter set in such preliminary work as the construction of housing accommodation for the men, warehouses for supplies, drainage works and construction railways were carried out. Work was also pressed on the construction of radio telegraph station, which was brought into operation in the month of February. Lumbering operations were also carried on during the winter, the timber obtained being suitable for temporary structures and ties. Some square timber forming part of the cargo of the wrecked steamer *Alette* was salvaged across the ice.

During the winter a tote road was constructed from the end of railway operations, over which upwards of 150 men reached Port Nelson early in April.

Through the purchase of steamers by the Department, steps have been taken to overcome the difficulties experienced in marine transportation; seventeen voyages having been made to Port Nelson during the season of 1914 without accident.

DARTMOUTH-DEANS BRANCH, I.C.R.

During the past year, work on this line has been progressing satisfactorily. The expenditure to date has amounted to about two-thirds of the total estimated cost, and it is anticipated that by the end of the current year the line will be practically completed. The right-of-way is entirely closed, and grading, which is being carried on at various points along the route, is now nearly complete, the balance remaining being mostly train fill from borrow pits. Track has been laid to 26.5 miles beyond Dartmouth. Satisfactory deposits of gravel have been found along the route and ballasting will be proceeded with during the coming season. The work is under contract with Messrs. M. P. and J. T. Davis.

CHAUDIÈRE RIVER BRIDGE.

This bridge, which is a double-track structure 760 feet in length, is located on the short connecting line which runs from the south end of the Quebec bridge to the I.C.R. main line. Early in 1912 it was found that the centre or midstream pier was in a dangerous condition, the upstream end of the pier having been badly undermined from scour, causing a considerable settlement at this end of the pier, and a bad crack in the masonry. A thorough examination of the conditions showed that it would be

SESSIONAL PAPER No. 20

necessary to take down and rebuild the pier and carry it down to solid rock formation, supporting the superstructure of the bridge on temporary work during this construction. This work, which was started in the latter part of 1912, has been under way during the past year. The upstream end of the pier has now been removed and rebuilt and the work of reconstructing the other end of the pier has been begun. It is expected that the entire new pier will be completed by the end of next season and temporary supports removed. Mr. Geo. N. Otty is the engineer in charge and the work is being carried out under contract with Messrs. M. P. and J. T. Davis.

SUBSIDIZED RAILWAYS.

A large amount of work has been handled during the year both in the office and in the field in connection with the inspection of subsidized railways. There were during the past fiscal year eighteen such roads under construction distributed over nearly every province in the Dominion.

I have the honour to be, Sir,
Your obedient servant,

W. A. BOWDEN,
Chief Engineer.

A. W. CAMPBELL, Esq.,
Deputy Minister,
Department of Railways and Canals,
Ottawa.

QUEBEC CANALS,
SUPERINTENDING ENGINEER'S OFFICE,
MONTREAL, July 10, 1914.

SIR,—I have the honour to submit herewith my annual report on the works under my charge, for the fiscal year ended March 31, 1914.

The Quebec Canals Division comprises the Lachine and Soulanges Canals on the St. Lawrence route; the Ste. Anne's, Carillon and Grenville Canals on the Ottawa river, and the St. Ours and Chambly canals on the Richelieu river.

Of these the Lachine canal is by far the most important owing to its immediate connection with the harbour of Montreal.

LACHINE CANAL.

Length, $8\frac{1}{2}$ miles; total rise, 45 feet; 5 locks, 270 feet x 45 feet, with 14 feet of water on sills; 5 old locks, 200 feet x 45 feet, with 9 feet of water on sills, still available to navigation.

OPERATION.

Navigation was carried on without interruption throughout last season, no accident of any importance having occurred between the opening on the 22nd April and the closing, which took place on the 8th December, 1913.

REPAIRS AND RENEWALS.

The principal works of repair performed during the year were as follows:—
Spare gates.—

Nineteen pairs of spare gates, which are kept submerged at convenient points, were carefully examined and made ready for an emergency.

Mooring posts.—

One hundred and ten wooden mooring posts were removed and replaced by cast-iron ones set in concrete.

Masonry and concrete work.—

The walls of the locks, weirs and bridge piers were pointed and grouted as far as was possible during the time the canal was unwatered in March and April.

A number of broken coping stones on new locks Nos. 3 and 4 were removed and replaced by re-inforced concrete.

Concrete side-walks were laid at each end of Wellington and Brewster's bridges, and a piece of concrete wall, 300 feet in length, was built between the south abutment of the Grand Trunk Railway bridge at Wellington street and the north west corner of Wellington basin.

Buildings.—

Pretty extensive repairs to the canal buildings were performed during the year. These buildings comprise residences for three foremen in the Mill street yard, shops, both in this yard and on the northwest side of the canal dry dock, statistical officer's and time-keeper's offices; lock and bridge houses and seven sheds.

Life protection appliances.—

All the existing appliances were kept in a safe condition; 75 additional iron ladders were permanently set in the walls of the canal and 85 life-saving sets consisting of a wooden buoy, 50 feet of strong line and a pole 22 feet long, with grappling prongs attached, were placed at different points along the canal banks and at the locks and bridges.

CAPITAL.

Concrete vertical walls.—

Five thousand four hundred lineal feet of wall were built during the season of navigation. Another section about 3,000 feet in length still remains to be done under this contract.

With the exception of a short piece near the Laehine locks, the canal slopes are now lined with concrete, from Cote St. Paul to Laehine.

The work is being done under contract by Messrs. Quinlan and Robertson.

Improvements at lock No. 4.—

This work, which is being done under contract by Messrs. Quinlan, Robertson and Miller, had progressed very satisfactorily last summer. At the close of operations in the fall, all the foundation walls of the new power house and the piers for the weir race ways, had been nearly completed. On the 1st March, 1914, the canal was unwatered and, by the end of the fiscal year, practically all the portions of the work which are to be submerged were in such a state of advancement as to ensure their completion within a couple of weeks. A section of the south retaining wall, about 180 feet long, immediately above the headrace had also been built.

Rebuilding St. Gabriel shed No. 1.—

This shed was burned in April 1913 and is now being rebuilt in steel, with concrete floor. Its size is 750 x 63 feet as against 750 x 40 feet in the old wooden shed.

The steel work was supplied and erected under contract by the Canadian Bridge Co., of Walkerville, Ont., and the roof was put on, also under contract, by the Westmount Plumbing and Heating Co., of Montreal.

DREDGING.

The dredging fleet was engaged during the month of May 1913 in removing stone blasted off the banks of the canal below the Lachine locks, and, also, doing some cleaning a short distance above Cate St. Paul bridge. On the 26th of that month it had reached Coteau Landing and was employed in excavating the new channel in the entrance of the Soulanges canal until the middle of November, when it was sent down to St. Anne, to do some cleaning in the upper entrance to the lock. The vessels went into winter quarters at Montreal on the 26th of that month.

REPAIRS TO VESSELS.

The Quebec canals dredging fleet comprises two steam tugs, the *Frank Perew* and the *Carillon*, one steam spoon dredge, one floating steam derrick, three dump scows, one of which was built during last winter, thirteen flat scows and a floating storehouse.

All these vessels were carefully repaired after the close of navigation in 1913 and were in very good condition when work was resumed in May last.

SOULANGES CANAL.

Length, 14 miles; 5 locks, 270 x 45 feet; 15 feet of water on the sills; total rise 84 feet.

OPERATION.

This canal was opened on the 24th April and closed on the 7th December, 1913.

Navigation on this canal was carried on without interruption throughout last season.

On two different occasions however, serious accidents were only avoided by the presence on the lower gate of lock No. 2, of the Manny protection beams.

The southeast leaf of that gate was struck by the steamer *E. A. Ames*, on May 15, and by the steamer *Majestic* on June 23, 1913.

In both cases a binding piece and the platform on the gate were broken, but the gate proper did not suffer any injury.

The protection beams, however, were so badly bent and distorted as to be of no further use. They nevertheless performed their function very well, preventing the gate from being thrown down, which certainly would have resulted in very considerable damage to the canal banks and lock below, not to mention a serious interruption of navigation.

REPAIRS AND RENEWALS.

Locks.—The mechanism of the Stoney sluices of locks Nos. 2 and 3 was renewed during the winter.

Cast-iron mooring posts.—The work of enlarging the concrete bases of the original mooring posts was continued last year and 21 of them were so repaired.

Canal slopes.—Several hundred yards of stone from the canal quarry were deposited on the slopes at points requiring immediate attention.

Fences.—Two miles of new fences have been built.

Store-keeper's lodgings.—These lodgings, which occupy two stories over the canal store, and which were damaged last fall by a fire in which two women and a child lost their lives, were duly repaired and a temporary life saving ladder provided.

Painting.—The following buildings and structures were painted during the year. All the lock houses and lock gates, also the electric poles on the whole length of the canal.

INCOME.

Rebuilding end of lower entrance pier.—About 50 feet in length of the south pier forming the lower entrance to this canal, had fallen down in 1912, it having been undetermined by the strong currents existing here at high water.

The necessary appropriation for its rebuilding having been provided, the contract for the work awarded to Messrs. Quinlan and Robertson on September 26, 1912.

After procuring the necessary timber for the cribwork foundation and removing part of the debris, the contractors decided not to proceed any further, the season being too far advanced.

Embankment at regulating basin No. 2.—The outside slope of the embankment at the northeast corner of regulating basin No. 2, which had slid down owing to infiltrations of the basin's water, was carefully reformed and partly sodded before the winter set in. A trench was excavated down to the rock at the foot of the inside slope and filled with concrete. Although the basin has not yet been refilled, it is confidently expected that this very troublesome leak has been stopped for good.

Spare lock gates.—All the spare lock gates, which had been submerged in the protection dock outside of the canal for the last twenty years, were hauled out of the water, repaired and placed on carefully prepared and even beds in regulating basin No. 1. In this connection some expensive patterns had to be procured, as the original ones could not be traced. It is the intention to have a complete set of these patterns made and to purchase spare castings for the lock gates during the present year.

Electric machinery.—Machinery for electrically operating the two small swing bridges at locks Nos. 3 and 4, was designed and the appliances purchased last winter. At the time of writing the motors are practically installed.

Freight shed.—A one story brick building 20 x 30 feet, with concrete floor, was erected on the north bank of the canal, between locks Nos. 1 and 2. It will be used as a temporary shelter for goods received by boat for canal purposes.

Rolling bridge.—A small steel rolling bridge was supplied by the Phoenix Bridge and Iron Works and creted over the entrance to Regulating Basin No. 1, in place of the old wooden floating span, the operating of which was sometimes difficult owing to the fluctuations of the level in the reach.

Equipment.—A 2-stage turbine pump, directly connected to a 10 H.P. electric motor and 200 feet of 2-inch hose were procured for fire protection and watering purposes, and a ¾-inch electric drill, with 10 feet of flexible shaft have been added to the equipment of our machine shop.

CAPITAL.

Protection works at upper entrance.—All the cribwork foundation of the break-water, that of the lighting pier and some 600 feet of that of the extension to the guide pier, were constructed and put in place before the close of navigation last fall. The excavation of the new channel by the Quebec canals dredging fleet also progressed very satisfactorily and it is hoped that the whole of this work will be completed before the winter sets in.

Steel stop logs.—A set of 16 steel stop logs, 47 feet 6 inches in length and 16 inches high, were purchased from the Dominion Bridge Company for use at lock No. 5, in case of accident or when it is desired to unwater the lock or the upper reach. Both ends of the canal are now equipped with reliable stop logs.

SESSIONAL PAPER No. 20

STE. ANNE'S LOCK.

Length $\frac{1}{2}$ mile, one lock 240 x 45 feet, with 9 feet of water on the sills. Old lock still available 200 x 45 feet, with 6 feet of water on the sills. Rise 3 feet.

OPERATION.

This lock was opened to navigation on the 22nd April and closed on the 14th December, 1913, no interruption in the passage of vessels having occurred during the season.

REPAIRS.

Besides ordinary maintenance repairs, the following items of work were performed during the year.

Upper guide pier.—The face and rear timbers in this pier were renewed on a length of 200 feet from a course one foot below low water mark to the top. It is the intention to permanently renew the top of this pier in concrete in a year or two.

Buildings.—Both the overseer's and statistical officer's offices and lodgings were painted, the floors renewed and water service installed.

Mooring posts.—Twelve wooden mooring posts were replaced by heavy cast-iron ones.

INCOME.

Upper pier between locks.—The contract for rebuilding in concrete the top of this pier from one foot below low water mark was awarded to the Montreal General Contracting Company, on the 8th October, 1913. Owing to high water in the Ottawa river, the contractors were unable to complete their contract last fall. At the close of navigation, however, the concrete work was built from the pier of the old lock to about 20 feet around the north end of the pier. The work will be continued this summer.

CARILLON AND GRENVILLE CANALS.

Carillon Canal.—Length, $\frac{3}{4}$ mile; 2 locks, 200 x 45 feet, with 9 feet of water on the sills. Total rise 16 feet.

Grenville Canal.—Length, $5\frac{1}{4}$ miles; 5 locks, 200 x 45 feet, with 9 feet of water on the sills. Total rise $45\frac{1}{4}$ feet.

OPERATION.

These canals were opened on April 22, and closed on November 30, 1913. Navigation was not interrupted during the season.

REPAIRS.

There is nothing to record here, under the above heading, beyond general maintenance work.

INCOME.

Lengthening apron of submerged dam.—During the spring freshet last year, a few cribs forming part of the apron of the dam were carried away. It had been the intention to lengthen that portion of this apron so as to bring it in line with the rest of it.

The work was done by day labour under the supervision of the head foreman of the Carillon and Grenville canals and successfully completed at the end of October last.

5 GEORGE V., A. 1915

ST. OURS LOCK.

Length, $\frac{1}{2}$ mile; one lock, 200 x 45 feet, with $6\frac{1}{2}$ feet water on the sills; rise 5 feet.

OPERATION.

This lock was opened to navigation on the 15th April and closed on the 30th November, 1913. No accidents or interruption of the traffic occurred during the season.

I have to record here the demise of Mr. Alfred Coderre, late overseer of this lock, and the appointment of Mr. François Robillard as his successor.

REPAIRS.

There is nothing to mention beyond the usual maintenance work.

INCOME.

Boom piers.—The three concrete boom piers which could not be completed during the season of 1912, were finished last fall. The replacing of all the wooden piers, both above and below the lock, by permanent concrete ones is now completed and the cost of maintaining them in good condition will, in future, be reduced to a minimum.

CHAMBLY CANAL.

Length, 12 miles; 9 locks, 118 x $22\frac{1}{2}$ feet, with $6\frac{1}{2}$ feet of water on the sills; total rise, 74 feet.

OPERATION.

This canal was opened to navigation on the 22nd April and closed for the winter on the 1st December, 1913, navigation being conducted without interruption during that period.

REPAIRS.

The most important items of work performed here under the above heading were the following:—

Syphon culvert.—One syphon culvert, which was out of order was thoroughly repaired and both inlet and outlet renewed.

Electric lighting.—The electric light line along the canal was completed, there remaining only a short section to build from the new wharf above the Central Vermont Railway bridge, at St. Johns, to the breakwater, a distance of some 800 feet. The switch board in the power station, the delivery of which was long delayed, was finally set in working order for the opening of navigation.

Lock No. 2.—In order to stop leaks through the west wall of this lock, a trench was dug along the rear face of it for its entire length and a coat of concrete laid, 10 inches in thickness, which has made the wall watertight.

Buildings.—The foundation walls and the floor of the saw-mill were renewed, and the old brick floor in the machine shop was removed and relaid in concrete.

Tail-race of waste weir at electric power house.—The lower section of the walls of this tail-race, which were in bad condition, were taken down and rebuilt in concrete on a length of about 100 feet.

SESSIONAL PAPER No. 20

INCOME.

Swing bridge at Larocque's crossing.—The old wooden swing bridge at this point was replaced by a steel span 63 feet long by 14 feet wide, built and erected, under contract, by the Hamilton Bridge Company, Hamilton, Ont. The remodelling of the substructure was done by day labour.

New lock gates.—Two pairs of new lock gates were built by the canal repair staff during the winter.

Regulating weir at Fryer's Point.—The old wooden weir at this point was rebuilt in concrete. The new structure is 47 feet long and 32 feet wide. It is provided with three passageways; the ones at each end, each 10 feet wide, are closed by stop logs over which the water overflows when it rises above normal level, whereas the centre one, 12 feet in width, is provided with steel sluices permitting to drain the canal to the bottom.

Dredging.—A considerable amount of work was done here by the Chambly canal spoon dredge, in deepening the basin above the Central Vermont bridge, at St. Johns. The material excavated was deposited behind the wharf built at that point three years ago by Messrs J. G. Poupore & Co. The basin, referred to is not yet completed and the work will have to be continued for one or two seasons more.

BEAUHARNOIS CANAL.

This canal has been under lease to the Canadian Light and Power Company since 1907 and is no longer under the direct control of the department. Some works connected with it are, however, still maintained by us.

HUNGRY BAY DYKE.

REPAIRS.

The weeds on the whole length (5 miles) of this dyke were cut twice during the summer and two miles of ditches were cleaned. The dyke proper, the road on top of it and the stone walls built as a protection for the lake shore were kept in good order.

The crushed stone purchased in 1912 was used last summer in filling holes and ruts in the macadamized roadway.

LAKE ST. FRANCIS.

INCOME.

Protection of shores.—During the winter, nine sections of dry wall, aggregating 3,810 feet in length were built at such places as required immediate protection. Of this total, 2,100 lineal feet were laid along the south and 1,700 feet along the north shore of the lake.

In addition to this, the walls already built were repaired on a distance of 4,860 feet, a considerable quantity of new stone being used for such repairs.

VALLEYFIELD DAM.

This dam was built in 1852 in connection with the Beauharnois canal, to close the channel separating the mainland from the Grand Ile de Beauharnois. Its upper side was then lined with eribwork which served as a dock, and this eribwork being in a very dilapidated condition, it was decided to face it with concrete and make the dock a permanent one. The contract for this work was awarded to Messrs. Cossette & Company, on the 26th July, 1913. Work was commenced a few days later, but, owing to lack of proper plant, the contractors did not accomplish anything worth mentioning. The contract has since been cancelled and the work will be executed during the year 1914-15.

The works under the heads of Capital and Income, on the Lachine canal, are under the immediate supervision of Lt. Col. H. R. Lordly, C.E., and Mr. L. S. Pariseau, C.E., is in charge of Capital and Income work on the other canals of this division.

I have much pleasure in stating that both of these gentlemen and the staffs under them have discharged the duties entrusted to them during the last year in a manner very creditable to themselves.

I have the honour to be, sir,
Your obedient servant,

ERNEST MARCEAU,
Superintending Engineer, Quebec Canals.

ONTARIO—ST. LAWRENCE CANALS.
SUPERINTENDING ENGINEER'S OFFICE.
ONTARIO-ST. LAWRENCE CANALS.

SIR,—I have the honour to submit my annual report on the maintenance and operation of the Ontario-St. Lawrence canals for the fiscal year ending March 31, 1914.

The Ontario-St. Lawrence canals comprise the Cornwall, Farran's Point, Rapide Plat and Galops canals, the north channel below Prescott on the River St. Lawrence, and the Murray canal between the head of the Bay Quinté and Brighton bay on the north shore of Lake Ontario.

CORNWALL CANAL.

The Cornwall canal was opened for navigation on April 16 and closed December 13, 1913, and was operated throughout the season without any serious delay to navigation.

Accidents.—On October 30 about 10 p.m. the barge *Cornwall*, belonging to the Montreal Transportation Company, loaded with wheat, while being towed down canal, struck the north bank a short distance below Lock No. 21 and swung across canal, where she remained for 14 hours. She was then found to be leaking too badly to proceed through the canal and was beached opposite the upper dam, where she still lies partially under water but well out of the way of navigation.

On November 6 at 10 a.m., steamer *John Lambert*, upbound, struck the upper gates of Lock No. 19, partially unmitred them and broke a suspension rod. At exactly the same time the steamer *Querida*, downbound, struck the upper gates of Lock No. 21 forcing the top of one gate almost at right angles to lock and colliding with the steamer *Windsor*, which was at the time in the lock. One heel casting and one suspension bar, all the binders, and portions of the valve machinery on the gates were broken, and the gates badly twisted. Temporary repairs were made, the gates straightened up, and navigation was resumed at 4 p.m.

Renewals and Repairs.—A portion of the masonry retaining wall, 75 feet in length, below large waste weir at Lock No. 17, was rebuilt. Six hundred and seventy lineal feet of rip-rap on south bank west of Cornwall bridge was rebuilt and faced with concrete.

Six of the old automatic valves in guard weir above Lock No. 20, which had become so badly warped that it was impossible to close them, were removed and replaced with new and stronger valves.

The opening attachment on south gate at guard gates above Lock No. 20 was repaired and strengthened.

Extensive repairs were made to rip-rap between upper dam and Lock No. 21.

The old gates, timber platform, and mitre sills at the head of old Lock No. 20 were removed and a concrete dam, surmounted by a reinforced concrete service bridge, was constructed across the lock in the upper recess.

All of the standing lock gates on the canal received one coat of paint and the operating machinery and valves in both lock gates and supply weirs were thoroughly overhauled and repaired and the machinery painted.

The old wooden intake and bridge at the Stormont Electric Light and Power Company's weir on the south side of canal west of the Cornwall bridge, which were badly decayed, were removed and rebuilt in reinforced concrete by the Company.

The above repairs were attended to while the canal was unwatered during the month of April, 1913.

Ten cast-iron mooring posts, set in concrete bases, were placed on the north bank west of old lock No. 17, three on each side of old lock No. 17, six on the south bank west of Cornwall bridge, seven on south bank east of lock No. 18, six on south bank west of lock No. 18, six on south bank west of the O. & N. Y. Ry. bridge and eight on south bank of lock No. 20, and twelve of the smaller size were placed along the south side of the repairing basin.

The concrete ways on the north side of the repairing basin in the low level were raised three feet to give better facilities for the repairing of boats.

A concrete sidewalk, 500 feet in length, was constructed on the south bank west of Cornwall bridge, leading to the overseer's house.

The coping of south west retaining wall above lock No. 18 for a distance of 350 feet was lifted, damaged stones redressed, and the whole reset to a line six inches back of face of wall and the course below coping chamfered off to meet new line, the coping being also reinforced behind with concrete. The northwest entrance wall at this lock, 30 feet in length, was treated in a similar manner.

A small reinforced concrete bridge was constructed over the intake to the waterworks pumphouse in south bank above lock No. 18. The coping on the south side of lock No. 19 was reinforced behind with concrete and concrete bases of mooring posts lifted and levelled.

The coping of northeast entrance wall at lock No. 20, damaged by steamer *Derbyshire* on May 22, 1913, was lifted, reset, and reinforced behind with concrete.

The coping on south side of lock No. 21 was reinforced behind with concrete and the coping of northwest entrance wall at this lock was lifted and relaid.

The old wooden culvert under highway at Mille Roches carrying drainage to old canal, and which had partially caved in, was removed and rebuilt in concrete.

Extensive repairs were made to the tarred felt roofing on large wood working machine shop.

On April 17 the lower gates in lock No. 17 were taken out and replaced with a pair of square gates. The gates removed were repaired and held for spare gates. On April 18th the south upper gate in lock No. 17 was taken out, a broken step removed and replaced with new one, and gate resteped. The upper gates from old lock No. 20 removed when concrete dam was constructed across this lock, were rebuilt and placed in upper recess of old lock No. 17 above the repairing basin, and the gates removed from old lock No. 17, for which there was no further use, were taken apart, the sound timbers sawed into plank and placed in stock. The lower gates at lock No. 21 were removed on October 3 and replaced with spare gates. The gates removed were at once repaired and placed in the upper recess of this lock in place of the gates damaged by steamer *Querida* on November 6, which were placed in the repairing basin and repaired during the winter. On December 3 the lower gates of lock No. 15 were taken out, placed in repairing basin and are now being repaired. They were replaced with a pair of spare gates.

During the winter new top bars, mullions, bridge planks and foot bridges were framed and made ready for the guard gates above Lock No. 20. The work of removing the old top timbers from these gates, which are badly decayed, and the placing of the new timbers will be completed before the opening of navigation.

The coping of the northeast hollow quoin of Lock No. 15, which was badly broken, was removed after the close of navigation, a new hollow quoin stone dressed and set, and all of the coping stones around the hollow quoin and chain well were lifted, reset, and dressed to proper line.

One thousand one hundred and eighty-five lineal feet of oak waling was placed on face of masonry wall on the north side of canal east of the Cornwall bridge. The

SESSIONAL PAPER No. 20

same length of life chain was also placed along this wall below the waling and 551 feet of life chain was placed on face masonry wall on the south side west of Cornwall bridge.

One section of the floating boom at the head of Lock No. 21, 95 feet long, was placed in the repairing basin after the close of navigation last season and repaired and strengthened during the winter.

Four sections of floating boom at Cornwall bridge, each 72 feet long, were also placed in repairing basin at the same time and rebuilt during the winter.

Both of the swing bridges on the canal received one coat of paint.

The roofs of the watch houses and transformer houses at all of the locks received one coat of paint.

Ordinary repairs to lock gates, fences, banks, and stone protection were promptly attended to, as well as the cleaning of ditches, cutting of weeds, etc.

Gardening.—During the season over 600 native trees and a large number of shrubs were set at various places along the canal. The grounds and flower beds at the various locks and parks along the line of canal were well looked after and presented a very attractive appearance. This portion of the ordinary work has expanded very much during the last few years and new sections of the canal are being improved from year to year. A large number of bedding plants are purchased each season for this work and I beg to strongly recommend the erection of a small greenhouse for the propagation of these plants by our own gardener, who is a most competent man.

The top courses of timber crib forming foundation for light house at the east end of St. Regis dyke about two miles below the Cornwall canal, and which had been seriously damaged by ice, were rebuilt and the stone protection along the face of dyke relaid where necessary.

Improvements.—The work under contract with Mr. G. R. Phillips for the improvement of the lower entrance to Lock No. 15 was completed in a satisfactory manner last season with the exception of some sodding which will be attended to early this season. This work as completed provides a safe and easy approach to this lock from the river and also provides much more harbour room for vessels waiting to pass through the canal.

A contract was entered into with The Kennedy Construction Company in December, 1913, for improving lower entrance to Lock No. 20.

The work consists of the removal of the present old entrance cribwork, 100 feet in length, which is in a very bad state of repair, and the construction in its place, and extending eastwards, of a concrete entrance wall, the total length of which will be 200 feet.

Work on this contract was commenced on December 16, and by January 3 the contractors had removed the top seven feet of the old cribwork, the water in this level of canal being lowered 4 feet to enable the work to be done.

During the winter all of the gravel required for the construction of the concrete wall was delivered, cement shed erected, cement delivered and stored, material for forms and necessary plant placed on ground, and every preparation made to resume operations as soon as water was drawn off canal.

The canal was unwatered on March 23 and the contractors at once resumed operations, removing old cribwork, building cofferdams, and preparing foundation for new concrete wall east of old cribwork.

The work will all be completed before May 15.

Surveys.—Two small survey parties were employed for about four months during the summer of 1913 at the work of obtaining elevations of the ground along the north side of the St. Lawrence river to determine the feasibility of constructing a deep water canal between the deep water below Prescott and a point at or near the mouth of the Ottawa river.

5 GEORGE V., A. 1915

The area covered comprises a strip of land from two to four miles wide on the north side of the St. Lawrence river between Cardinal and Lancaster.

From these levels a fairly accurate contour map has been prepared on which several locations have been shown and from which profiles of the different locations are being plotted and approximate estimates prepared. The field work between Lancaster and the Ottawa river will be completed during the coming season by one party.

THE WILLIAMSBURG CANALS.

The Williamsburg canals were opened for navigation on April 15 and closed December 16, and were operated throughout the season without any delay to navigation.

Accidents.—On July 12, 1913, the steamer *Toiler*, upbound, while entering lock No. 23 of the Rapide Plat canal, collided with the high level entrance wall at the foot of the lock on the north side displacing and breaking some of the coping stones. The sum of \$100 was deposited by the owners of the steamer to cover the cost of repairs, which will be made before the opening of navigation.

On November 24 the steamer *Cadillac*, downbound, while entering lock No. 28, Galops canal, struck and slightly damaged the south upper gate. Repairs were promptly made and the cost defrayed by the owners of the boat.

Renewals and Repairs.—About 800 lineal feet of stone protection to banks near the head of the Farran's Point canal was rebuilt and large boulders were placed for a considerable length along the river shore of this bank to form a toe for future rip-rapping.

All of the lamp posts on both sides of lock No. 22 at Farran's Point, numbering 16, were moved back about 6 feet to the line of the mooring posts, to be out of the way of vessels' lines, and 7 lamp posts were placed on the new north entrance pier, gas pipe laid, and the whole connected up with the acetylene gas lighting plant.

The gas plant was thoroughly overhauled and all buildings and standing gates on this canal painted.

While the water was lowered in the Rapide Plat canal during the month of April, about 1,400 feet of the stone protection on the south bank opposite the village of Morrisburg was taken down and relaid and the rip-rap stone on the remainder of the south bank, which had rolled down the slope, was thrown back into place in readiness for hand-laying.

A quantity of large boulders was placed along the river shore of the bank, south of lock No. 24 to protect it against wash from the river, which had already made considerable inroads on the earth filling at this point.

The coping of the masonry wall on the south side of the lower entrance to lock No. 23 was lifted, reset, and reinforced behind with concrete, and the wall pointed.

All of the masonry walls in the vicinity of lock No. 23 had joints raked out and repointed above water line.

The high masonry walls on north side of canal in front of the village of Morrisburg were thoroughly repointed.

At lock No. 24 all of the masonry walls above water line were repointed.

About 2,000 lineal feet of the stone protection on south bank of the Galops canal, west of lock No. 25, were relaid.

A large watering place was constructed for Mr. Geo. A. Binion on the north side of the Galops canal, about two miles west of lock No. 25, to replace watering place destroyed during the enlargement of canal.

The two large valves on the north side of lock No. 25, used for filling the 500-foot chamber of this lock, were removed after the close of navigation, sent to our machine shop at Cornwall, and thoroughly repaired, shafts straightened, and new steps pro-

SESSIONAL PAPER No. 20

vided and fitted. They will be replaced in position before the opening of navigation. The removal and replacing of these valves had to be done by diver as no means were provided for the unwatering of the intake when lock was constructed.

Five reinforced concrete bridges were constructed over the Government ditch west of Iroquois, and three corrugated galvanized iron pipe drains were laid in ditch and covered to take the place of old wooden crossings which were badly decayed.

A reinforced concrete floor was placed in village power house at Iroquois, and the south wheel pit pumped out to allow of repairs being made to water wheels. A final settlement of all disputes arising from the construction of this power house by the department was thus effected.

The street along the north side of the canal boundary, west of the weir, in the village of Iroquois, was drained, graded and macadamized.

A portion of the roof of the lockmaster's house at lock No. 25 was reshingled, and a hot air furnace installed in a satisfactory manner.

Two hundred and fifty lineal feet of 9-inch tile drain was laid in ditch across canal property, south of lock No. 25, and ditch filled in.

Forty-four large cast-iron mooring posts, set in heavy concrete bases, were placed at lock No. 25.

Some pointing was done on the masonry walls of locks No. 27 and No. 28, as well as the weir walls and entrance walls to these locks.

The grounds around all the locks are being gradually levelled up and seeded, the flower beds are neatly kept and a large number of small trees and shrubs were planted at various places along the canals.

Ordinary repairs to gates, buildings, bridges, weirs, and banks were attended to, as well as the cleaning of ditches, cutting of grass and weeds, etc.

IMPROVEMENTS—FARRAN'S POINT CANAL—IMPROVING LOWER ENTRANCE.

The work under this contract, which was awarded to The Randolph MacDonald Company, Limited, on the 22nd of May, 1911, was finally completed in a satisfactory manner in August, 1913.

The work embraced the removal of the old cribwork pier on the north side of the lower entrance to this canal, down to the low water line and replacing it with concrete wall, a length of 750 feet, and the extension of the cribwork pier with concrete walls on top for a further distance of 1,140 feet, besides the necessary dredging to provide proper foundations for cribs.

The work as completed has vastly improved the entrance to this canal and vessels upbound have now no trouble when approaching the lock, if they are properly handled, in spite of the treacherous eddy at this point.

RAPIDE PLAT CANAL—IMPROVING LOWER ENTRANCE TO LOCK NO. 24.

This work, which is under contract to Messrs. Roger Miller and Sons, comprises the widening and straightening of the canal immediately below the lock, and the construction of a timber and concrete approach wall on the north side of the lower entrance to lock. Of the work under this contract there now remains to be done only a small quantity of dredging, which will be completed early this season.

GALOPS CANAL—LOCK NO. 28.

The position of this lock, which surmounts the Galops Rapids, is open to the river at each end and unprovided with guard gates which can be used when a down-bound vessel is entering the lock, made it imperative that some means be provided for closing the lock in the event of an accident to gates.

5 GEORGE V., A. 1915

Three steel lattice girders designed to be placed, in case of emergency, in the stop log checks at head of lock, furnishing support for a timber bulkhead, are now lying on south side of lock.

A contract with the Dickson Bridge Company was entered into on December 31, 1913, for the construction and erection of a steel bridge to be swung across the lock for the purpose of lowering steel girders into position.

This bridge will be erected in position before May 31.

Surveys.—The survey for the extension of the upper entrance of the Rapide Plat canal to make it possible for downbound vessels, drawing 14 feet, to use this canal during periods of low water, was completed last season. The whole of the location of the proposed new entrance has been sounded and cross-sectioned. As the canal is at present it is not safe for large boats to enter it from above. The Rapide Plat opposite this canal is shallow, and in season of low water, boats have to lighten to 13 feet in order to pass through this rapid.

MURRAY CANAL.

The Murray canal was opened for navigation on April 10 and closed on December 10, and was operated throughout the season without serious delay to navigation.

Accidents.—On May 10 the three-masted schooner *Major N. H. Ferry*, west bound, collided with one of the piers of the Central Ontario Railway bridge, and sunk in canal a short distance east of the Smithfield road bridge. No damage was done to bridge and no delay was caused to navigation.

A good deal of trouble was experienced in the raising of this vessel and it was not till June 10 that she was finally removed from the canal. It was necessary to close the canal to navigation from 3 p.m. May 30 to 10 a.m. May 31 to allow wrecking plant to work to advantage. After removing her from canal she was abandoned by the owners and sunk in the Bay Quinté about one mile east of the canal and close to the south shore.

On July 9 the steamer *North King*, west bound, struck the east rest pier of the Trenton road bridge displacing several of the coping stones.

On July 22 the same steamer, east bound, struck the west rest pier of the Smithfield road bridge, displacing eleven coping stones.

In both cases repairs were promptly made by the canal staff and the cost of same paid by the owners of the vessel.

On October 6 the barge *Sophia Minch* in tow of the steam barge *John Rolf*, struck the east pier of the Smithfield road bridge, displacing two coping stones. The damage was promptly repaired and cost defrayed by the owners of the barge.

Renewals and repairs.—All of the buildings on this canal received one coat of paint. Two rooms in foreman's house were repapered and inside woodwork painted. Three rooms in bridgeman's house at Smithfield road bridge were repapered. The inside woodwork in bridgeman's house at C. O. Railway bridge was painted and cistern cleaned out and recovered.

About 10 miles of wire fencing along right-of-way was thoroughly repaired.

About 6,500 lineal feet of telephone line were erected along the north side of the canal between C. O. Railway bridge and the Smithfield road bridge and the canal telephone moved from the watch-house at the railway bridge and permanently installed in the canal foreman's house.

All necessary repairs were made to rip-rap, banks, and roads, all catch water and offtake ditches were kept clean and in good repair, grass and weeds kept cut, and minor repairs made to bridges and houses.

The sand spoil dump alongside of the bridgeman's house at the railway bridge was levelled down, graded around the house, covered with good soil and seeded.

SESSIONAL PAPER No. 20

Improvements.—The work under contract with the MacDonald Contracting Co., Limited, for the removal of certain high areas in the bottom of this canal, was completed in a satisfactory manner in June, 1914.

The bottom of canal is now clear to its original depth, eleven feet at low water stage in Lake Ontario. The final estimate for this work has been paid.

Surveys.—The survey to ascertain the extent and cost of the work necessary to provide a navigable depth in this canal of 14 feet at low water stage in Lake Ontario has been completed. An approximate estimate of the cost has been prepared and sent to the department.

The large increase of traffic through this canal during recent years, and the increasing number of vessels of the larger class using this waterway, would seem to warrant the deepening of this canal to permit vessels using it to load St. Lawrence canals draught, and vessel owners are urgent in their demands that this be done.

Attached are statements of fines and damages collected during the year, and highest and lowest water in river at each of the canals.

I have the honour to be, sir,
Your obedient servant,

C. D. SARGENT,
Superintending Engineer.

W. A. BOWDEN, Esq., C.E.,
Chief Engineer,
Department of Railways and Canals,
Ottawa, Ontario.

STATEMENT OF Fines and Damages in Connection with "Ontario-St. Lawrence Canals," for the year ending March 31, 1914.

5 GEORGE V., A. 1915

ONTARIO-ST. LAWRENCE CANALS,
SUPERINTENDING ENGINEER'S OFFICE,
CORNWALL, April 1, 1914.

SIR,—I have the honour to submit my annual report on the St. Peter's Canal for the fiscal year ending March 31, 1914.

The canal was opened for navigation April 7, 1913, and closed January 9, 1914, and was operated throughout the season without interruption to navigation.

The total number of vessels of all classes that passed through this canal was 1,850, of which 1,333 were registered and 517 unregistered.

The unregistered vessels were chiefly fishing boats and other small craft measuring from 2 to 10 tons burthen. Following is a descriptive statement of these unregistered vessels:

DESCRIPTION.			TOTAL.		CARGOES—TONS.			
Sail.	Motor.	Aux.	Tonnage.	Pass.	Farm Produce.	Coal and Wood.	Fish and Bait.	Misc.
350	75	92	2239	205	4	47	189	74

Owing to want of proper repairs from time to time in the past the lock gates and their equipment are in such a condition that only by the strictest supervision and making constant minor repairs was it possible to keep the lock in operation throughout the season. The gates are becoming more difficult to operate every day owing to the condition of their hangings, toe rollers and segment plates.

The swing bridge over the canal near the lake entrance is also in very bad shape and will need to be replaced with a new one in the near future.

Necessary repairs were made from time to time to the lock gates and bridge. Wire netting was placed on each side of the swing bridge and all general repairs were attended to during the season.

A new freight shed was erected at the lake entrance to the canal in place of the old shed at the Atlantic entrance, which had to be removed on account of the works of improvement now being carried on.

An accident occurred on September 27th, between the hours of 7 and 8 in the evening, by which an elderly woman lost her life. She attempted to cross the swing bridge while it was being opened in spite of the fact that she was warned not to do so by the bridge men.

The coroner's jury returned a verdict of accidental death, attributing no blame to anyone.

IMPROVEMENTS.

The works of improvement, as designed, consist of the construction of a new lock and entrance at the Atlantic end of the canal.

This work, which is under contract with Mr. W. H. Weller, of St. Catharines, Ont., was commenced on May 4, 1912, and was carried on without interruption till January 9, 1913, when it was closed down for the season. Work was resumed on

SESSIONAL PAPER No. 20

April 15, 1913, and continued throughout the season up to February 7, 1914, when it had to be closed down on account of the extreme cold weather, the difficulty of securing a steady supply of efficient labour, and the need of extensive repairs to the contractor's plant.

The principal item of work accomplished at present on this contract, is earth excavation, and the extremely hard nature of this material (making necessary the constant use of dynamite to loosen the earth in front of the steam shovel) has greatly retarded the work, and progress up to the present time has been very disappointing.

The total amount of material excavated to date is 187,000 cubic yards, of which 110,000 cubic yards were excavated during the season of 1913.

As a result of new borings taken in February, 1914, to more accurately determine the surface of rock, it was found that there was very much less rock to be excavated than was originally estimated. As a result of these borings the fact was revealed that by far the greater part of the new lock as designed would not rest on solid rock.

In view of this fact I have recommended to the department that a new location for this lock be adopted and certain changes made in the location of the new entrance.

In order to carry out the work on the lines of the proposed change in location, it will be necessary to close the present canal to navigation for one year, which is perhaps the most serious matter to be considered in this connection, but the change proposed will materially improve the Atlantic entrance to the canal, from an operating point of view.

The whole matter is now under consideration and the work under contract is being held in abeyance by the contractor, awaiting the decision of the department.

I have the honour to be, sir,
Your obedient servant,

C. D. SARGENT.
Superintendent Engineer, Ontario-St. Lawrence Canals.

W. A. Bowden, Esq., C.E., Chief Engineer,
Department of Railways and Canals,
Ottawa, Ont.

RIDEAU CANAL.

SUPERINTENDING ENGINEER'S OFFICE. *

OTTAWA, April 1, 1914.

SIR,—I have the honour to submit herewith, my report on the Rideau canal for the fiscal year ending March 31, 1914.

Navigation opened at Ottawa, on May 1, 1913.

Navigation opened at Kingston Mills, on May 1, 1913.

Navigation closed at Ottawa, on November 30, 1913.

Navigation closed at Kingston Mills, on November 24, 1913.

Navigation was uninterrupted throughout the entire season until the middle of November, when the water in Rideau lake had fallen about two inches below navigation height; but as the season closed in that vicinity about the 24th, inconvenience was only experienced for about ten days on account of low water.

The coping of the mitre sill of the middle lock at Hartwells locks burst up from water pressure in July; but navigation was only delayed for one Sunday.

The freshet of 1913, which was in progress when I wrote my last annual report, was passed through the various levels without damage, in spite of the fact that it was of longer duration and greater volume than for many years past—in fact it was remarkable where so much water came from, as the snowfall was very much below normal. I am of the opinion that the excessive rains of 1912-1913, which caused the levels to continue high all winter, were in reality the chief cause of the long continued period of high water, as they were all full when the freshet occurred.

The present freshet commenced on the 27th March ultimo, and so far, is the lightest I have ever known. It is not of course over by any means, nor in fact can it be said to have reached its height; but a great quantity of ice has already gone, and as the ice (which is of unusual thickness this year) is really what causes damage, I do not anticipate any injury to the structures or weirs, even if the water continues to rise.

The lockages at Ottawa were slightly fewer than last year, but from Hartwells to Smith's Falls there was a small increase in the number; whilst at Poonamalie there was a very large increase, the total for the season at that station being 5,602, an increase of 1,370 over the number of lockages in 1912. This is of course due to the ever increasing number of motor boats going into Rideau lake. From the Narrows lock to Kingston, the lockages last year show a small decrease in number from those of 1912.

The principal works and repairs carried out along the line of the canal during the past fiscal year are as follows:—

OTTAWA LOCK STATION (8 Locks and 1 Basin).

Two new pairs of lock gates were framed and hung in locks Nos. 3 and 8. A new mitre sill was built in lock No. 4, and the sill of lock No. 2 was repaired. A new concrete coping is being laid on the sill of lock No. 3.

A fire occurred in the oil room in the storehouse, supposed to have been caused by spontaneous combustion. The shed was partially destroyed, but has been rebuilt and a new concrete floor laid thereon. The lock house was repaired, and portions of the interior were painted; and a new varandah built at the west side.

Small repairs such as grouting and pointing, were made to the masonry of the locks; and some new water boards put under the lock gates. A considerable portion of

SESSIONAL PAPER No. 20

the roadway round the basin was macadamized; and portions of the wharves were taken down and rebuilt—which latter work is still in progress. A new offtake drain and grating were placed at the wharf at the foot of Canal street. The electric light system round the locks and basin, from the Ottawa river to Laurier bridge was rebuilt—the arc lamps being discarded and replaced with tungsten lamps in clusters of four to each pole, all enclosed in clear glass globes with canopy on top. This system is a great improvement in every way, as we obtain a better light, and the cost of patrolling and carboning has been abolished, our own men looking after renewals, etc. The basin was cleaned out and deepened by our new dredge *Tay*, a much needed improvement, the work serving the double purpose of deepening the basin, and also affording a test under our own supervision of the working of the new dredge before we took her over from the contractor who built her.

OTTAWA EAST BRIDGE.

Small repairs were made to the roadway, and also to the pivot and rest piers. The corporation of Ottawa, with the consent of the hon. the Minister, built a sidewalk on the upstream side of the bridge last spring, suspended on brackets.

CONCESSION STREET BRIDGE.

Two new spring locks were placed at either end of the swing bridge, on account of the old latches having proved defective in jarring open, thus allowing the swing to partially open. Small portions of the bank between this bridge and Bank street were ripped, and some gravel was placed on the road.

HARTWELLS LOCK STATION (2 Locks).

A new lay-by pier 125 feet long was built on the west side of the canal at the head of the locks. Some more dry stone walling was built along the east bank of the canal; and about 2,000 feet of the old dry stone wall was cemented in situ by Concrete Constructions Limited, with what is known as the "Cement Gun." This process consists of projecting dry sand and cement through a line of hose under air pressure, to a nozzle where it is met by a jet of water which hydrates the mixture and blows it into the interstices of the stone under a pressure of about 40 to 50 pounds per square inch. The permanent result of this method of grouting of course remains to be seen, but I think it should be fairly satisfactory; the chief fault, in my opinion, being the bespattered appearance of the walls when finished. It can be readily understood that projecting rich grout in this manner into a dry stone wall will solidify it; but it is almost impossible to do such work without covering up the face of the wall with the cement when projected with such force. Thus the face stones are splashed and partly covered up with cement, which may or may not flake off afterwards.

Otherwise the system would appear to be fairly satisfactory, particularly in open stonework which cannot be readily taken down and rebuilt.

Small repairs were made to the lock house and outbuildings and to the station generally.

The canal bank road requires to be thoroughly overhauled and macadamized, on account of the exceedingly heavy traffic over it; for which traffic, by the way, it was never intended or constructed. Portions will be put in shape this coming season.

HOGSBACK LOCK STATION (2 Locks, 1 Swing bridge).

Three of the large ice breaker cribs above the waste wiers were taken down to water level and rebuilt and filled with stone. Portion of the back of the dam was repaired with stone, and a large quantity of clay was placed on the face of the

5 GEORGE V., A. 1915

structure. More dry stone walling was built along the east side of the cut below the locks; and the roadway received some repairs. The swing bridge across the upper lock was cleaned by sand blast and painted by Concrete Constructions Limited.

The ice between the boom and the waste weirs was all blasted out before the freshet commenced; and the boom itself was provided with new $\frac{3}{4}$ -inch chains between each length.

BLACK RAPIDS LOCK STATION (1 Lock).

The old stone lock house which was in a dangerous state was taken down, and a frame house built upon the old foundation walls. The old storehouse was also taken down and rebuilt on concrete foundations. The lay-by piers at the foot of the lock were repaired, and sundry small repairs made to the station generally.

LONG ISLAND LOCK STATION (3 Locks, 1 Bridge).

A new storehouse on concrete foundations was built here last summer. During the winter very extensive repairs were made to the upper lock; which was practically all taken down and rebuilt. The cause for these repairs was the fact that both chamber walls had gradually shoved forward from the top of the fourth course from the bottom, to such an extent that each side of the chamber of the lock, for its whole length, overhung the bottom courses by fully 14 inches. This was caused by a defective method of construction when the lock was built, as, in order to get rock foundation, the builders had to go down about six feet below the required level of the bottom of the lock; and instead of commencing with a battered face to the walls from the bottom, the lower six feet of the chamber wall was built with plumb face, and the batter commenced from that point and continued upwards for a further height of over 19 feet. There being no support outwards for the lower courses as there was no filling put in, the wall simply shoved forward imperceptibly year by year at the angle formed where the batter joined the plumb face, with the above result.

Portions of the timber apron below the bulkhead were repaired; and some new stoplogs were framed for the bulkhead at Manotick.

MANOTICK BRIDGE.

Some new pin beams were put under the swing span, and some extra joists under the fixed spans.

Materials for a small boathouse for the bridgekeeper were supplied; he erected the same himself.

WELLINGTON BRIDGE.

No repairs made here last year.

BECKETT'S LANDING BRIDGE.

No repairs made here last year.

BURRITT'S RAPIDS LOCK STATION (1 lock, 1 bridge).

The old timber waste weir was taken down and rebuilt. A new set of stoplogs was furnished for the same, as well as new flashboards for the flat dam. Portions of the masonry of the stone waste weir were repaired. A long protection crib 450 feet in length was built below the waste weir to stop the erosion that has been going on for years to the bank of the island; and another crib 160 feet long was built at the head of the island for the same purpose. These cribs were filled with stone furnished by

SESSIONAL PAPER No. 20

contract with Mr. C. White for the latter, and by contract with Mr. Z. Percival for the former.

The swing bridge in the village was cleaned by sand blast and painted by Concrete Constructions, Limited, and sundry small repairs were made to the station in general.

NICHOLSON'S LOCK STATION (2 locks, 1 bridge).

A small frame house for a lockman's residence, and a stable for the lock' house, were purchased from the owners, who were leaving our service, and who had erected them for their own use on canal land. Sundry small repairs were made to the station in general.

CLOWE'S LOCK STATION (1 lock).

Sundry small repairs were made to the lock house. A new set of stoplogs was framed for the waste weir, as well as a pair of lifting crabs for the same.

Heavy repairs were made to the retaining dam, which is one of the old structures built by stone laid perpendicularly and arched upstream. The centre of the dam after 80 years use had been pushed downstream to a considerable extent, thus destroying the keywork. About 160 feet of the dam was taken down and relaid in cement to its original radius. Sundry other small repairs were made to the station in general.

MERRICKVILLE LOCK STATION (3 Locks, 2 Basins, 2 Bridges).

Two new pairs of lock gates were framed and hung, and four new sluice frames with new flanges supplied.

Two new timber and concrete mitre sills were laid in the upper and centre locks. A new set of stoplogs was framed for the bulkhead at the head of the upper cut, as well as a new set of flashboards framed for the flat dam. Sundry other small repairs were made to the station in general.

A contract has been let to Mr. John O'Toole, of Ottawa, for the construction of a new concrete retaining dam at this station. This dam is to be built from the head of the upper lock to the north bank of the river; and in addition to its replacing the present old dam, it will catch all the present leakage through the north side of the upper cut, in the pond it will form when finished. The cement for this dam, as well as the stoplogs and stoplog lifters, are being provided by the department, and do not form any portion of the contract.

KILMARNOCK LOCK STATION (1 Lock, 1 Bridge).

Extensive repairs were made to the back dam last winter, the work being done by contract with Mr. A. E. Newsome. New timbers have been placed on the dam for 455 feet of its length, and 600 cubic yards of stone were also supplied and placed in position. Both ends of this dam were carried further up to the higher ground, and I think that the water will now be prevented from getting round the ends of it as frequently done. The dam is now in far better condition than it has ever been before. Sundry other small repairs were made to the station generally.

EDMOND'S LOCK STATION (1 Lock).

The stone dam received considerable repairs, and all the wooden blocks which had temporarily filled the places of stones carried out by ice, were replaced by stones laid in cement. The top of the dam was also concreted to carry flashboards without scribing them to fit the irregularities of the old stones. Some clay also was placed on the back of the dam, and sundry small repairs were made to the station in general.

5 GEORGE V., A. 1915

OLD SLYS LOCK STATION (2 Locks, 1 Bridge).

Small repairs were made to the lower sill of the lower lock, and to the sluices of the lower gates. Two new swing bars were framed for the lock gates. Some clay filling was placed between the upper lock and the lock house, and the sundry small repairs were made to the station generally.

SMITH'S FALLS COMBINED LOCK STATION (3 Locks, 1 Basin, 2 Bridges).

Small repairs were made to the porch of the lock house. A new sidewalk on steel brackets was built on the two spans of the bridge below the basin, the work being done by the Dominion Bridge Company, Montreal. A new bulkhead was framed and put in on the west side of the basin dam. Small repairs were made to the swing bridge, the lock masonry, and to the station generally.

SMITH'S FALLS DETACHED LOCK STATION (1 Lock, 2 Bridges).

The concrete wall on the south side of the cut from the lock to the basin has been completed by the Contractor, Mr. James Bogue, of Peterborough. Some more filling was placed on the south side of the basin. A small addition was built to the storehouse, and sundry repairs were made to the lock house. The island on which the lock house stands was underbrushed and cleaned up in order to make a good roadway to the wharf at the head of the lock. The Bascule bridge built at the head of the lock by the Canadian Northern Railway Company, has now been supplied with an electric motor; so that it is to be hoped no more of the delays occasioned last season, by the slow hand operation of this structure, will be experienced.

POONAMALIE LOCK STATION (1 Lock).

Two lay-by piers, each 150 feet long, were built, one above and the other below the lock. Four new stoplogs were framed for the waste weir. A dry stone wall about 60 feet long was built above the upper wharf; and the cement-laid wall on the north side of the upper cut, was extended for 380 feet, which extension has completed the work. Small repairs were made to the lock house and other government buildings, and to the station generally.

BEVERIDGES LOCK STATION (2 Locks, 1 Bridge).

The swing bridge above the lower lock was cleaned by sand blast and painted by Concrete Constructions Limited. Some clay was placed on the retaining dam, and sundry small repairs made to the station in general.

PERTH BRANCH (1 Basin, 4 Bridges).

Considerable repairing was done to the wharf at the north end of the basin, portions of which have been rebuilt. The work will be continued along the west side of the basin this year. The sidewalk on Drummond Street bridge is being renewed. When re-erected it will be 18 inches wider than before in order to conform to the line of the sidewalks on each side of the bridge. The water service on the canal bank has been extended as far as Beckwith Street bridge, and this has enabled us to keep the lawns and slopes in excellent condition. Sundry repairs were made to the banks and tow path roads generally.

OLIVERS FERRY BRIDGE.

The approaches at each end of the bridge were rebuilt and graded up and the outside slopes rip-rapped. New joists have been delivered, and will be put in to carry a new floor next winter.

SESSIONAL PAPER No. 20

THE NARROWS LOCK STATION (1 Lock, 1 Bridge).

The lock labourers' house was re-shingled and clapboarded, and the lock house was painted. Some gravel was placed on the dam, and sundry small repairs were made to the station in general.

NEWBORO LOCK STATION (1 Lock, 1 Bridge).

The dry stone wings on each side of both abutments of the high level bridge were filled with cement by means of the "Cement Gun" by Concrete Constructions Limited. These wing walls are very high and last spring one of them fell outwards into the canal. The work done by the company, (although it must be confessed that its appearance could be improved upon), has converted these loose stone wings into concrete monoliths, and has removed all possible danger of another slide.

The lock house was painted, and sundry small repairs were made to the station in general.

CHAFFEY'S LOCK STATION (1 Lock).

Small repairs were made to the lock house and also to the storehouse. The grounds on the west side of the lock were partly underbrushed and cleaned up, and this work will be continued this year. The Canadian Northern Railway Company's line crosses the canal with a fine high level bridge above the lock, and a station has been built near by; so that I anticipate a great influx of tourists to this beautiful lake section of the canal in the near future.

DAVIS'S LOCK STATION (1 Lock).

Small repairs were made to the bridge crossing the waste weir and to the station generally.

JONES' FALLS LOCK STATION (4 Locks, 1 Basin, 2 Bridges).

Some new wire fencing was erected round the combined locks. The stonework of the lock house was pointed, and a new cement floor was laid in the cellar. Some clay and gravel were placed on the dam and the storehouse was re-shingled. Sundry repairs were made to the station in general.

BRASS'S POINT BRIDGE.

Sundry small repairs were made to the handrailing and flooring.

UPPER BREWERS LOCK STATION (2 Locks, 1 Bridge, 1 Basin).

Small repairs were made to the dam, and to the station generally.

LOWER BREWERS LOCK STATION (1 Lock, 1 Bridge).

The wharf above the lock was taken down to low water mark and rebuilt. Small repairs were made to the approaches on each side of the swing bridge, and to the lock house, and to the station in general.

KINGSTON MILLS LOCK STATION (4 Locks, 1 Basin, 2 Bridges).

One new pair of lock gates was framed and hung. The swing bridge across the upper lock, and the fixed bridge below the west weir were cleaned by sand blast and painted by the Concrete Constructions Limited. Two new sluice frames were placed in position. The storehouse was re-shingled, and a new galvanized iron roof laid on

5 GEORGE V., A. 1915

the addition to the block house. A large quantity of stone was placed on the embankments and small repairs were made to the lock house, and to the station generally. At present time a new concrete lining wall is being built on the south side of the basin, which work will be finished this month before navigation opens. Mr. J. M. Campbell, the lessee of the water power below the waste weir, is building his plant, and when finished the appearance of the station will be materially improved.

The curve stone retaining dam is in need of pointing and repairing, and this will be the subject of a separate report later on.

BOB'S LAKE RESERVOIR DAM.

No repairs were made to this dam last year.

WOLF LAKE RESERVOIR DAM.

Small repairs were made to the sluiceway and bridge crossing the same. As I reported to you, the discharge of water from Wolf lake is very much obstructed by the existence of a private mill dam belonging to a Mr. Derbyshire, about half a mile below our dam; and which dam, being built to the same height as that to which we are entitled to raise the water in Wolf lake, renders our dam useless for the purpose for which it was built, by backing up the water on to it. I have already suggested a remedy by the purchase from Mr. Derbyshire of his dam, for a small sum, and I trust my suggestion will meet with your approval.

GENERAL.

The usual spring repairs, such as pointing and grouting the lock masonry, painting of lock gates, bridges, fences, etc., etc., were executed by the lock labourers after they came on duty for the season last April.

The heavy dimension stone for lock repairs was quarried by our men last summer in Westport quarry, where it was also cut and dressed to dimension. It was freighted to its various points of destination by our own tugs and scows.

The materials required for the season, such as cement, paint, oil, etc., etc., were purchased for us by the purchasing agent of the department; and we delivered them along the line of the canal with our own tugs and scows.

DREDGING PLANT.

The dredge *Rideau* was employed all last season on the Perth branch of the canal, cleaning out and widening the clay and also the rock cuttings (the latter being blasted out ahead of her). She has another full season's work ahead of her on the Perth branch.

She wintered in the Perth basin, and is now being repaired and fitted out for the season's work.

The tug *Loretta* was employed last season as usual in buoing out the channel, towing scows, delivering timber, stone, cement, and other stores, and also on inspection work. She wintered in the Ottawa basin, and is now being fitted out and repaired for the ensuing season's work.

The tug *Agnes* was employed last season in towing scows and delivering materials along the canal, and also in attendance on the new dredge *Tay*. She wintered in the Ottawa basin, and is now fitting out for the season.

The new dredge *Tay* was delivered by the contractor in October last, and was at once put to work in cleaning out and deepening the canal basin at Ottawa. She has given us the greatest satisfaction both as to her equipment and the satisfactory manner in which she works, and reflects great credit on her builders, the W. H. Kelly Lumber

SESSIONAL PAPER No. 20

Company, of Buckingham. Our dredging plant now consists of two tugs, two dredges, two side dumping and five flat scows, and one gasoline launch, all of which are in fine order.

The following is a statement of the highest and lowest water on the lower mitre sills of locks Nos. 1 and 47 at Ottawa and Kingston Mills lock stations, respectively:

I have the honour to be, sir,
Your obedient servant,

A. T. PHILLIPS, M. Can. Soc. C.E.,
Superintending Engineer

W. A. BOWDEN, Esq., C.E.,
Chief Engineer,
Department of Railways and Canals,
Ottawa, Ont.

TRENT CANAL.

SUPERINTENDING ENGINEER'S OFFICE,

PETERBOROUGH, May 30, 1914.

W. A. BOWDEN, Esq.,
 Chief Engineer,
 Department of Railways and Canals,
 Ottawa, Ont.

DEAR SIR,—I have the honour to submit my annual report for the fiscal year ended the 31st March, 1914, covering the work of construction chargeable to "capital," Trent canal.

ONTARIO—RICE LAKE DIVISION.

This section extends from Trenton on Lake Ontario to Rice lake, a distance of 50½ miles, a detailed description of which was given in my annual report for 1910.

For construction purposes the division has been divided into 7 sections or contracts; the estimated value of which as revised to date is about \$5,100,000, on which there has been expended for work done and materials delivered up to the 31st March, 1914, the sum of \$4,206,171.52, or about 83 per cent of the estimated value of the seven contracts at their respective contract rates.

There are on the division 18 locks, 14 dams and 18 bridges. All the locks are built ready for the reception of their gates. Their upper and lower entrance piers are also finished with the exception of the lower piers of lock 15, which will be finished this summer. All the dams were built except Nos. 4, 9 and 10 which are from 25 to 90 per cent built and will be finished this year. Fifteen bridges are finished and in commission. The substructures of two others are finished, but the construction of the bridge for the Grand Trunk railway main line at Campbellford has not been begun.

Section No. 1.—This section extends from Trenton to Glen Miller, a distance of about 4½ miles, on which stretch of the river there are 3 locks, 3 dams and 2 bridges. The contractors for the work, Messrs. Larkin & Sangster, completed the whole of the works embraced in their contract in December, 1913.

During the past summer, 1,350 feet of concrete wall along the river side of the channel in front of Meyer's island, Trenton, was built for the protection of the navigation channel at this point during the spring freshets. The wall was fully and satisfactorily completed last autumn.

The final estimate for Messrs. Larkin & Sangster's contract is now being prepared and will be completed at an early date.

The Sydney Electric Power Company's plant at dam No. 2 has been in continuous operation throughout the year. A short description of this plant was given in my annual report for 1912.

The substructure of the Gilmour Siding Bridge is finished up to water level, but cannot be completed until the design of the superstructure has been definitely decided upon.

The main line of the Campbellford Lake Ontario and Western Ontario Railway (Canadian Pacific Railway) crosses the river about 4,700 feet below lock No. 1 by a viaduct 1,500 feet long and 50 feet high, built under the terms of lease 19946, dated the 14th March, 1913. It is designed for a single track and will provide a clear head

SESSIONAL PAPER No. 20

room of 39 feet between the lowest steel and high water. The navigation channel span is 100 feet wide in the clear. The substructure for the bridge was finished in March, 1913 and the superstructure was fully erected in September, 1913, when construction trains immediately began crossing the bridge. The whole of the work was carried out by the railway company at their own cost.

Miller Bros., Glen Miller, in August, 1912, began the construction of a concrete dam of the canal type at Glen Miller to replace their old wooden structure at this point. The west half of the dam was finished in December, 1912, and the whole of the structure was fully completed in July, 1913. The work was carried out by the Ambersen Hydraulic Construction Company, of Montreal, under contract with the Miller Bros.

Section No. 2.—This section extends from Glen Miller to Frankford, a distance of about $4\frac{1}{2}$ miles, on which stretch of the river there are 3 locks, 3 dams and 1 bridge. A contract for the work was entered into with Messrs. Dennou & Rogers on May 20, 1908. The total value of the work done and materials delivered up to March 31, 1914, amounted to \$566,669.51, or about 80 per cent of the value of the contract.

The three locks on the section are completely finished, also the work in connection with the three dams except the platform across the top of the piers of dam No. 4, which will be finished early this summer.

All the excavations with the exception of a little cleaning up has been finished in the upper and lower entrances of locks 4 and 5 and also in the lower entrance to lock 6. There is yet about 5,000 yards of excavation to be taken out of the canal prism above lock 6 and some concrete lining has yet to be laid on the bottom and slopes of the upper end of this short canal, all of which work should be finished early this summer.

Between August 1913 and January last the contractors removed about 32,000 yards of rock from the submarine channel above dam No. 6. There is yet to be excavated in this cut 35,000 yards of rock distributed over a distance of about 3,100 feet, which will take them most, if not all, of this season to complete.

The contractors should easily complete the contract this season.

The hydro-electric plant of the Sidney Power Company at dam No. 5 was placed in commission on January 28, 1913. The power house, tail race and grounds were fully completed last summer and present a fine appearance. The plant has been in constant operation since it was placed in commission.

Section No. 3.—This section extends from Frankford to a point three miles west of Glen Ross, a distance of about $7\frac{1}{2}$ miles. At Glen Ross there is a lock, dam and two bridges.

A contract for the work was entered into with the Canadian General Development Company, Limited, on April 24, 1908. The total value of work done and materials delivered up to March 31, 1914, amounted to \$181,042.32, or about 63 per cent of the value of the work.

The lock, dam, bridges and part of the short canal at Glen Ross were finished in the fall of 1909, since which date no work has been done on the section until a month ago. On February 9, 1914, the company assigned the contract to Fred A. Robertson and Company, who are now building a dredging plant at Glen Ross for the purpose of proceeding with the completion of the excavation.

Section No. 4.—This section extends from Adam's Landing, a point three miles west of Glen Ross to Campbellford, a distance of about 14 miles. There are between Bradley Bay and Campbellford, 5 locks, 3 dams, 4 bridges and about 1 mile of concrete retaining wall for enclosing the river through the town of Campbellford, together with a large quantity of earth and rock excavation.

A contract for the work was entered into with Messrs. Hancy, Quinlan and Robertson on June 22, 1910. The total value of the work done and materials delivered up to March 31, 1914, amounted to \$936,012.62, or about 70 per cent of the value of the contract.

The five locks are finished. Dam No. 8 is finished. Dam No. 9 is half built and will be finished this summer. Dam No. 10 is partly built, but its completion is held up pending the construction of the Grand Trunk Railway main line bridge at Campbellford. All bridges on the contract are finished with the exception of the Grand Trunk Railway main line bridge which has not yet been begun.

The river walls through Campbellford are finished with the exception of a small piece through the Grand Trunk Railway embankment at the east end of the present railway bridge across the river.

The principal item of work remaining to be done on this contract is earth excavation. There are yet 190,000 yards of dredging in Bradley Bay to be done, which work the contractors will not begin until they can bring a dredging plant in from Lake Ontario. There are yet 60,000 yards of excavation in the canal prism between locks 8 and 9, the removal of which is being proceeded with. The concrete yet to build on the section is about 9,000 yards, chiefly in dams 9 and 10. Owing to the dredging in Bradley Bay it will take two years to complete this contract.

Section No. 5.—This section extends from Campbellford to Crow Bay, a distance of three miles. On the section are two locks, 2 dams and about half a mile of concrete wall for enclosing the river through Campbellford. A contract for the work was entered into with Messrs. Brown and Aylmer on September 28, 1907. The contract was amended on May 30, 1911, so as to include the construction of the river walls through Campbellford at the lower end of the section.

The total value of work done and materials delivered up to the 31st March, 1914, amounted to \$612,420.21, or about 91 per cent of the value of the contract.

The whole of the works embraced in the contract are completed with the exception of some dredging in the river channel below lock 13, which cannot be completed by the contractors until such time as the level of the river is raised to normal navigation level, so as to enable them to float their dredging plant over the site of the excavation yet to be removed. The level of this reach cannot be raised until dam No. 10, on section 4, is finished.

Section No. 6.—This section extends from the lower end of Crow Bay to 1,000 feet west of Heeley Falls bridge, a distance of three miles. There are three locks, one dam and one bridge on the section, together with a large quantity of earth and rock excavation. The short canal at this point is located on the west side of the river, and is designed to overcome the 76-foot rise between Crow Bay and the 14 miles of river reach between Heeley Falls and Hastings.

A contract for the work was entered into with Messrs. Haney, Quinlan & Robertson on the 23rd May, 1910. The total value of work done and materials delivered up to the 31st March, 1914, amounted to \$457,635.14, or about 87 per cent of the total value of the contract. The three locks are finished and also their upper entrance piers, with the exception of the lower piers of lock 15, which will be built this summer.

The temporary unwatering culverts of the closed section of the Heeley Falls dam were closed on Sunday, the 16th November, 1913, on which date the sluices in the dam were placed in commission. The concrete work of the dam was finally completed on the 15th December, 1913.

The principal work remaining to be done on the section is the excavation of the lower entrance to lock 15, and the back filling of the lock walls, the whole of which should be completed early this season.

Throughout the past year the Eastern Power Company have been proceeding energetically with the construction of their hydro-electric plant at Heeley Falls, and now have the power house well advanced towards completion. Two units are partly installed and the tail race from the power house to Bradley Bay is said to be excavated to grade for a width of 30 feet. One unit was connected up in a temporary manner last fall, and was tried out on the 23rd November, and connected up under load with the rest of the Electric Power Company's system on the 30th November, 1913, since

SESSIONAL PAPER No. 20

which date it has been running in a more or less intermittent manner, depending on current required for carrying the load on the Company's system.

Section No. 7.—This section extends from Heeley Falls to Rice Lake, a distance of about 19½ miles. The principal works consist of a large quantity of earth and rock dredging in the river, the construction of a new lock and dam at Hastings, a new and longer swing span at Trent Bridge, and new guide piers for the G. T. railway bridge at Hastings.

The contract for the work was entered into with the Randolph Macdonald Co., Limited, on the 4th January, 1909. The total value of work done and materials delivered up to the 31st March, 1914, amounted to \$377,514.75, or about 88 per cent of the value of the contract.

The new lock was placed in commission on March 30, 1911, and the new dam in October, 1912. The new swing span at Trent Bridge was placed in commission on the 5th June, 1911, and the guide piers for it were finished last August. The new channel through Trent Bridge has been dredged to grade for full width, but it is not cleaned up. All the structures on the section are finished with the exception of a few channel piers.

The principal work remaining to be done is dredging, which the contractors hope to complete early next fall.

BRIDGES.

On the 30th June, 1911, a contract was entered into with the Hamilton Bridge Works Company, Limited, for the manufacture and erection of a "Strauss" Highway Bascule Bridge for the canal at Bridge street, Campbellford, Ont. The bridge is a single leaf of the heel trunnion type consisting of 108 feet through truss movable span and 35 foot tower span carrying the counterweight.

The erection of the bridge was far enough completed to permit it being placed in commission on the 21st March, 1913, since which date the bridge has been completed and a final estimate returned for it.

The Canadian General Electric Company provided the electrical equipment for the bridge under a contract dated the 28th October, 1912. The equipment is fully installed and tested, but has not yet been finally accepted as there are a few minor adjustments to be made to some parts of the machinery.

On the 12th November, 1912, a contract was entered into with the Hamilton Bridge Works Company, Ltd., for the manufacture and erection of a Strauss Railway Bascule and fixed span bridge for carrying the Northumberland Paper Mills Railway siding over the canal at Campbellford. The bascule is a single leaf, single track bridge, consisting of an 83 foot through plate girder movable span and a tower carrying the counterweight. The fixed span is a semi-through plate girder 77 feet long. The bridge is now completely erected and finished.

On the 4th March, 1913, a contract was entered into with the Canadian General Electric Company for the electrical equipment required for the operation of the bridge. The work of installing the equipment has been finished and the company are now operating the bridge during a period of 30 days, as provided for under their contract. The electrical equipment of this bridge has been installed in a first class manner and reflects great credit on the workmanship, care and attention given to its manufacture and erection by the company.

VALVES FOR LOCKS.

Wagon valves.—The contract for the manufacture and erection of the wagon valves required for the new locks and regulating culverts of the Ontario-Rice Lake division of the canal was entered into with the Dominion Bridge Company, Ltd., on the 15th October, 1908.

5 GEORGE V., A. 1915

All the valves have been installed in place and the work is entirely completed with the exception of the adjustment and field painting of the valves at locks 8, 9, 10, 13 and 15, which will be fully completed some time this summer.

LOCK GATE OPERATING MACHINES.

Mr. Herbert B. Collier's contract, dated 7th May, 1909, for the supply and delivery of operating machines, anchorage fittings and pivots required for the lock gates of the new locks along the canal was fully completed in October, 1913, at a total cost of \$76,078.06. These machines, etc., were manufactured and installed for Mr. Collier by the Wm. Hamilton Company, Peterborough.

EMERGENCY DAMS.

The Dominion Bridge Company's contract dated the 5th April, 1911, for the supply, delivery and erection of 7 sets of steel stop logs and bridges for emergency dams was fully completed in November, 1913, at a total cost of \$50,711.

These structures have been placed at the heads of locks situated at the lower end of long river reaches or lakes, and are intended for use in case through accident connection is established between the upper and lower levels by a stream through the lock chamber of such velocity that the mitring gates could not be closed until the current was checked. In general the structure consists of a small deck girder swing bridge of unequal arms carrying a trolley car and winches for handling and placing the 5 steel stop logs for closing the head of the lock. These logs when not in use are stored on the short arm of the bridge and act as a counterweight for balancing the bridge when swinging it.

LOCK GATES.

On the 8th August, 1913, a contract was entered into with Messrs. Roger Miller & Sons, Ltd., for the manufacture and erection of lock gates for the Ontario-Rice Lake Division.

The contract calls for the construction and erection in the locks of 32 pairs of gates, and the construction and storing of 8 pairs of spare gates. All the timber and practically all the metal work has been delivered on the ground. On the 31st March, 1914, 18 pairs of gates were in various stages of construction and the contract at that date was about 60 per cent finished.

Owing to the unfinished condition of the dredging, dams and bridges between Trenton and Hastings it is doubtful if the gates will be all stepped in the locks this season.

PONTOON GATE LIFTER. -

On September 2, 1913, a contract was entered into with Messrs. M. Beatty and Sons, Limited, for the manufacture and erection complete of a steel pontoon gate lifter for stepping the lock gates of the Ontario-Rice Lake division.

The hull is built of steel plates and structural steel sections throughout and is constructed with sloping ends with rounded corners and bilges for the purpose of easy towing over long distances. The hull at deck level is 55 feet long by 27 feet 6 inches wide. The depth of the hull is 9 feet. It is provided with rolling ballast tub equipments under deck and carries a derrick, the lower part of which is firmly riveted to the hull. The upper part of the derrick is movable, so that it can be lowered for passing under overhead bridges. The machine is designed for handling a gate leaf 37 feet high over timbers, and weighing 50 tons.

The machine to-day is practically completed and ready for testing and will probably be delivered at Trenton by the end of this month.

SESSIONAL PAPER No. 20

NASSAU DAM.

Last September plans and specifications were prepared for the construction of a new concrete dam at Nassau to replace the present wooden structure which is in a leaking condition. Tenders were invited for the work and that of Messrs. Chambers, McCaffrey and McQuigge was accepted, but so far no work has been done.

FENELON FALLS DAM.

Last spring a plan and specification was prepared for the construction of a new concrete dam at Fenelon Falls to replace the old wooden dam at that point. Tenders were invited for the work and a contract entered into on the 12th June, 1913, with Messrs. McPhee and Kehoe, for the construction of the new dam.

At the close of last season the contractors had completed the construction of 6 sluices and 7 piers with the platforms across the top of them. These six sluices of the new dam were placed in commission on the 11th November. There are yet to build three sluices at the north end and 4 sluices at the south end of the dam, all of which will be completed early this season. The total value of the work done and materials delivered up to the 31st March, 1914, amounted to \$15,169.70, or about 43 per cent of the value of the contract.

BOBCAYGEON.

Last fall a survey was completed at Bobcaygeon with the object of preparing plans and specifications for the construction of a new lock at this point to the same dimensions as that of the locks on the Ontario-Rice Lake division. The present lock has been in commission since 1857 and owing to settlement, its walls are in bad condition. The material on which the lock is built and through which the canal at the head of it is excavated consists of masses of rock, boulders, gravel, etc., through which the water leaks in large volume and renders the operation of the present lock very difficult. Owing to these causes it has now been decided to build a new lock at this point and tenders will be asked for the work as soon as the plans and specification are ready.

SEVERN RIVER DIVISION.

During the past two years a complete survey of the Severn river has been made with the object of preparing plans and specifications for the work of canalizing the river to the same dimensions as the Ontario-Rice Lake division. The various outlets or mouths of the river have been thoroughly surveyed and sounded, and also the north shore of Matchedash bay, for the purpose of determining the best harbour for the northern terminal of the canal. After careful consideration South Honey harbour has been adopted as the northern terminus. From the harbour the canal will follow the land locked channel around Beausoleil island and Skylark rock into Matchedash bay. A small lock will also be built at Port Severn to give access to Gloucester pool from the Waubaushene district.

At the head of Gloucester Pool a short canal with two locks will be built around the south shore of the river to pass the Little and Big Chutes, while at Swift Rapids a single lock will overcome the rise now existing at Ragged Rapids which will then be drowned out. The Orillia hydro-electric plant at Ragged Rapids will be moved down to the new dam at Swift Rapids. At Washago a short canal about two miles in length will be built across the neck of land between Severn Bridge and Couchiching Lake.

This division embraces 43 miles of all river route between deep water at Skylark Rock in Matchedash Bay and deep water in Couchiching Lake. This stretch of

5 GEORGE V., A. 1915

canalized river and lake will comprise when completed 4 miles of canal; 5½ miles of submarine channel, and 33¾ miles of deep river and lake navigation whose minimum width will be about 200 feet. The rise between extreme low water level of Lake Huron and normal navigation level of Couchiching Lake is about 139¾ ft., which rise will be overcome by 5 locks with lifts ranging from 14 to 47 feet. Thirteen concrete dams with stoplog sluices will be required for the regulation of the river, six of these will be small dams at Washago. With a low water flow of 800 S.F. the gross H.P. on the river between Wasdell Falls and the Georgian Bay is about 12,000. Hydro-electric developments are in operation to-day at Ragged Rapids and Big Chute and another plant is in course of construction at Wasdell's Falls. It is probably only a question of a short time when the H.P. of the river will be fully developed to supply electrical energy for distribution along the east shore of Lake Huron.

The normal navigation level of the natural reaches of the river and Sparrow and Couchiching Lakes will be, in the majority of cases, that of ordinary summer level, so that practically no damage will be done by flooding the land along the river and lake shores. The dams will hold the reaches at as high a level as practicable, which, in the majority of cases, will be lower than the top of the river banks. The canals and channels with banks showing above water will have a minimum bottom width of 80 feet and the submerged channels will have a minimum bottom width of 100 feet, which will be marked where necessary by small piers and range lights. The canals and submarine channels will have a minimum depth of 9 feet at normal water level.

There will be eight steel bridges, five of which will be for highway and three for railway traffic. One railway and three highway bridges will be swing spans, the remainder being high level fixed bridges. In the latter case the minimum clear head room will be 35 feet between normal water and the lowest steel. The locks will be of concrete and will have 8 feet 4 inches of water on the sills, with chambers 33 feet wide by 175 feet long between hollow quoins. They will accommodate barges of 1,000 tons whose size will be 150 feet long by 30 feet beam and drawing 8 feet of water. Entrance piers of not less than 150 feet in length will be provided above and below each lock. The locks will generally be filled through culverts 4 feet wide by 5 feet high formed in the side walls. They will be provided with wagon or cylindrical valves for controlling the water. The mitering lock gates will be of the solid timber type and the upper gates in all cases will be set on the top of lift walls. The mitering lock gates will be operated by struts or bars worked by hand power winches set in recesses formed in the side walls.

For construction purposes the division has been divided into four sections, two of which are under contract and plans and specifications for another are now ready for advertising the work for tenders. The plans and specifications for Section No. 1 will be ready for advertising the work in the autumn of this year.

Port Severn Section.—This section comprises the construction at Port Severn of a lock of 14.5 feet lift, 100 feet long between hollow quoins and 25 feet wide with 6 feet depth of water on the mitre sills, and the main regulating dam at the mouth of the river, together with several smaller dams in the immediate vicinity of Port Severn, and the necessary excavaton at the upper and lower entrances of the lock for providing a channel 6 feet deep at normal water level.

A contract for the work was entered into with the York Construction Company, Limited, on September 24, 1913. The total value of work done and materials delivered up to March 31, 1914, was \$7,749.88. The principal item of work done to date is the excavation for the lock which will be built this summer.

Section No. 2.—This section extends from the end of section 1, at Big Chute to a point about half a mile above Macdonald rapids, a distance of about 11½ miles. The contract includes a regulating dam on Pretty channel north of the Big Chute, a regulating dam about 70 feet high with a lock and power house at Swift rapids and the re-construction of the Canadian Northern Railway bridge at Ragged Rapids, together

SESSIONAL PAPER No. 20

with a lot of granite rock excavation. The lock at Swift rapids is unique inasmuch as it will probably, when completed, have the highest lift of any lock of this type in North America. The width of the lock is 33 feet, with a usable length of 165 feet and a depth of 8 feet 4 inches on the lock sills. The lift of the lock is 47 feet and it will be provided with a vertically operated steel gate at the lower end. The maximum clearance under the gate when raised above normal water will be 35 feet.

STREAM MEASUREMENT.

The Trent river has its head in Rice lake, and for some distance flows in a north-easterly direction forming the boundary between Peterborough and Northumberland counties; it then flows through the latter in a southerly and easterly direction to Hastings county through which it flows in a southerly direction along its west side to Trenton on the bay of Quinte, lake Ontario.

The Trent river has a watershed of about four thousand eight hundred and thirty-six square miles distributed very approximately as follows: Above Heeley Falls, 3,705 square miles; the Crow river, 620 square miles; between Heeley Falls and Trenton, 511 square miles. It will be seen that the greater portion lies above Heeley Falls, and this is principally north and west of Rice lake in the counties of Peterborough, Victoria and Haliburton. This northern and western portion of the watershed supplies the chain of lakes forming the Trent navigation which drains into the Otonabee river and thence to Rice lake. This chain of lakes, sometimes called the Kawartha lakes, is fed from the north by Jack's creek, Eel's creek, Deerbay creek, Mississauga river, Squaw river, Nogie's creek, Burnt and Gull rivers, and, from the south, by the Scugog river and Emily and Pigeon creeks. Generally the lakes divide the granites and gneisses on the north from the limestones and agricultural lands on the south. The former are yet more or less covered with hemlock, spruce and other soft woods and some fine ridges of merchantable hardwoods. South of the lakes the country is almost denuded of timber. The pine in the Trent watershed is practically exhausted. The principal tributary of the Trent river east of Rice lake is the Crow river.

On the Gull and Burnt rivers some expenditure has been made for conservation purposes in rebuilding old dams in concrete or timber, while many timber dams on the smaller tributaries are also being maintained in an efficient condition for conservation and for the lumber interests. The water so stored is, however, largely, if not all, drawn off by the lumbermen during the first half of the summer period for log driving down the tributaries, and, later, for flushing logs down the Otonabee river. The result is that the reservoirs formed as above for conservation purposes are usually drained off, and for all practical purposes "dry" by the middle of August of each year, to the detriment of the power users, who want a definite maximum low water flow established during the latter part of the summer and continuously through the fall months of each year.

The waste of water by the lumber interests can only be checked by a continuous and efficient series of log slides, as may be required, along the route of the principal tributaries north of the main chain of lakes and continuously from the latter down the Otonabee to Peterborough.

Two sharp crested weirs for stream measurement have been built and several gauging and metering stations have been established on the river and its tributaries, principally for statistical purposes, but these records will also be valuable at some future date in determining the possibility of maintaining a fixed definite maximum low water flow for power purposes.

Attached to this report are tables showing the discharge of the Crow River for the years 1911-12 and 13, over a weir built a short distance above Crow Bay into which the river discharges. This weir was built and placed in commission during October, 1910. The watershed tributary to it amounts to 620 square miles.

Attached to this report are also tables showing the daily discharge of the river over the weir at Heeley Falls, for the years 1912 and 1913. The weir was built and placed in commission during November, 1911. The watershed tributary to it amounts to three thousand seven hundred and five square miles.

Tables drawn up from the above are also given representing the discharge over the Heeley Falls and Crow river weirs jointly, this being the discharge or flow of the Trent river at Campbellford for the years 1912 and 1913.

There are also attached tables giving the total actual monthly discharge in cubic feet from the weir measurements at Crow river and Heeley Falls, and the deduced flow in cubic feet per second respectively.

Three diagrams are also attached showing the flow of the Crow and Trent rivers.

Diagram No. 1 represents the discharge in cubic feet per second of the Crow river, as measured over the sharp crested weir at Crow river, for the years 1911, 1912, 1913 and a portion of the present year 1914.

Diagram No. 2 represents the discharge in cubic feet per second of the Trent river, as measured over the sharp crested weir at Heeley Falls, for the years 1912, 1913 and a portion of the present year 1914.

Diagram No. 3 represents a combination of diagram No. 1 and diagram No. 2 and gives the flow of the Trent river past Campbellford, for the years 1912, 1913 and a portion of the present year, 1914.

It will be noticed that the flow past Campbellford has been taken as the sum of the flow from Crow river and Heeley Falls; it would be more accurate to say that the flow past Campbellford in this report is "referred" to the actual weir measurements taken at Crow river and Heeley Falls. The flow into the river between these latter points and Campbellford, however, when considered in reference to rainfall and evaporation will not materially affect the figures given.

It is interesting to compare the results given in this report with the rainfall at some definite position. In what follows the rainfall at Peterborough, Ontario, is taken as the reference.

For the year 1912 the Peterborough rainfall was 39.25 inches or equal to 2.89 cubic feet per second per square mile.

The Crow river watershed with an area of 620 square miles thus shows a total rainfall for the year of 620×2.89 or 1,790 cubic feet per second.

The Heeley Falls watershed with an area of 3,705 square miles thus shows a total rainfall for the year of $3,705 \times 2.89$ equals 10,700 cubic feet per second. These two results show a total of 12,490 cubic feet per second.

From the figures given in this report for the year 1912 the "ratio" of "run-off" to "rainfall" for the Crow River watershed is equal to 57 per cent. For the Heeley Falls watershed 43.6 per cent and for the flow past Campbellford 45.4 per cent.

For the year 1913 the Peterborough rainfall was 24.11 inches or equal to 1.778 cubic feet per second per square mile.

The Crow River watershed with an area of 620 square miles thus shows a total rainfall for the year of 620×1.778 or 1,100 cubic feet per second.

The Heeley Falls watershed with an area of 3,705 square miles, thus shows a total rainfall for the year of $3,705 \times 1.778$ or 6,575 cubic feet per second.

These two results show a total of 7,675 cubic feet per second.

From the figures given in this report for the year 1913 the "ratio" of "run-off" to "rainfall" for the Crow River watershed is equal to 69.2 per cent, for the Heeley Falls watershed 56.2 per cent, and for the flow past Campbellford 58.1 per cent.

The average rainfall at Peterborough for the past fourteen years is about 31.95 inches. It will thus be seen that the rainfall for 1912 is above the average and the rainfall for 1913 below the average by an almost equal amount. The variation in the ratio of flow to rainfall is curious, and interesting, and would indicate considerable variation in local rainfalls over the district and doubtless variations in humidity and seepage.

SESSIONAL PAPER No. 20

LAKE SURVEYS.

Some field work was done during the past year on the hydrographic survey begun six years ago, of the chain of lakes which form part of the Trent waterway. The field work done to date has also been plotted. It is the intention to continue the field work this summer.

A few photographs of the work on the Ontario-Rice Lake Division accompany this report.

I am, sir,

Your obedient servant,

ALEX. J. GRANT,
Superintending Engineer.

TABLE No. 1A.

DAILY discharge of the Crow River for 1911.

Days.	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1.....	352	131	150	593	2,094	851	663	274	195	167	161	811

TRENT CANAL.

PETERBOROUGH, May 26, 1914.

SIR,—I have the honour to submit the annual report on the maintenance and operation of the Trent canal for the year ending March 31, 1914.

The extent of waterway open to navigation is the same as last year, namely 160 miles.

OPENING AND CLOSING OF NAVIGATION.

Hastings to Rice lake, opened June 9, closed December 11.

Rice lake to Peterborough, opened May 3, closed December 18.

Peterborough to Lakefield, opened May 20, closed November 8.

Peterborough lift lock, opened May 20, closed November 8.

Lakefield to Bobcaygeon, opened April 26, closed November 29.

Bobcaygeon to Rosedale, opened May 25, closed November 29.

Balsam lake to lake Simcoe, opened May 1, closed October 20.

Kirkfield lift lock, opened May 1, closed October 20.

Lake Simcoe to Orillia, opened May 1, closed November 18.

The following work was performed on the several divisions of the canal during the year:—

HEALEY FALLS TO BOBCAYGEON.

REPAIRS.

Peterborough Lift Lock.—In order to drain the gate recesses in the upper reach, three-inch pipes were placed through the concrete centre wall between the upper bays

of the lock. These pipes were carried into the upper engine room and there connected with the waste pipes.

New rubber seal tubes were fitted to the gates of this lock.

The interior of the chambers was scraped and repainted with a graphite paint.

Bridges.—Bridges at the following points were replanked: Lock No. 7, Maria street, Peterborough, Warsaw road and Buckthorn.

Booms, Slides and Dams.—The dam at Lakefield was partially rebuilt and general repairs made to booms, slides and other dams.

Banks.—Slides which occurred in the slopes at the Peterborough lift lock were repaired. Other slips have since occurred which will be repaired and sodded during the coming season.

Four hundred and sixty-five feet of 24-inch cement pipe drain and one hundred feet of 8-inch drain, together with three concrete catchwater basins and manholes, were laid on the west side of the Peterborough lift lock to carry surface water to the canal below the lock.

Wharves.—The public wharf at the village of Keene was raised about two feet, filled and planked.

Shelters were provided on public wharves at Whitfields, Hales and Smithsons.

Minor repairs were made to public wharves at Gore's Landing, Harwood, Dunnetts, Hales and Smithsons.

Buoyming.—The channel in Pigeon creek from Pigeon lake to Omeme as well as the channel in Indian river from Rice lake to Keene was marked with spar buoys.

Painting.—Lockgates, lockhouses and fences were painted where deemed desirable. The interior of the lockhouse at lock No. 7 was renovated.

The highway bridge at Hastings was painted.

HEALEY FALLS TO BOBCAYGEON.

INCOME IMPROVEMENTS.

Repairs to Headwater Dams.—Otter Lake dam was rebuilt, the Forks dam was partially rebuilt and repairs were made to Burnt dam, all on Squaw river.

Riprapping.—The rubble wall facing the slope above the lock at Lakefield was rebuilt for a distance of about three hundred feet. Catchwater basins and tile drains were placed behind the wall, having weep drains at frequent intervals.

About four hundred feet of protection was placed on the water line of the east canal bank, south of the Grand Trunk Railway bridge at Nassau.

BOBCAYGEON TO BALSAM LAKE.

REPAIRS.

Bridges.—The highway bridge at Rosedale was repaired and replanked.

Booms, Slides and Dams.—In addition to general repairs, eight hundred feet of the superstructure of the wing dam at Bobcaygeon was rebuilt. A landing stage for small boats was built at Fenelon Falls.

Painting.—Lockgates and buildings at Lindsay, Fenelon Falls and Rosedale were painted, as well as the following bridges: Lindsay street, Lindsay; Wellington street, Lindsay; Fenelon Falls and Rosedale.

Repairs to Reservoir Dams.—General repairs were made to the following dams: Percy, Little Bob, Crab, Halls, and minor repairs to Norland, Elliott's and Devil's.

SESSIONAL PAPER No. 20

INCOME IMPROVEMENTS.

Repairs to Headwater Dams.—Extensive repairs were made to dams at Big Bob, Oblong and Paint lakes, and minor repairs to the following dams: Hawk lake, Mud lake and Keneese lake. At Moore's Falls the south end of the dam was rebuilt in concrete and a canoe slide built to connect the upper and lower pools.

BOBCAYGEON TO BALSAM LAKE.

INCOME IMPROVEMENTS.

Dredging.—The channel of the Scugog river, north of the town of Lindsay, was widened and deepened to improve navigation to that town. About ten thousand cubic yards was removed by the dredge between the 12th of May and the 3rd September, when the dredging plant was moved to Balsover on the Balsam Lake-Lake Simcoe Division.

BALSAM LAKE TO LAKE SIMCOE.

REPAIRS.

Locks.—Two new valves were placed in the upper gates of lock No. 1. Cement floors with tile drains leading therefrom were placed in the lockhouses at locks Nos. 2, 3 and 4. A tile drain was laid from the cellar of the lockhouse at lock No. 5.

Kirkfield Lift Lock.—One hundred and twenty feet of drain built in concrete was constructed in the tailrace from the power house.

Bridges.—The following bridges were replanked:—Portage road, Balsover, and Boundary road.

Wharves.—A small wharf was provided at Atherley on lake Simcoe.

Fences.—About eighty rods of fencing was moved back to permit of a ditch being dug on its former location and twenty rods of new fencing built.

Marking Channels.—Electric lights were installed at the swing bridge across the narrows between lakes Simcoe and Couchiching, and electric range lights to mark the channel between shoals at the narrows were placed on the lake shore about one mile north of the town of Orillia.

The channel on lake Couchiching from Mile island to Washago was marked with spar buoys.

A new buoy was placed at Couchiching point. This buoy carries a light at night.

BALSAM LAKE TO LAKE SIMCOE.

INCOME IMPROVEMENTS.

Dredging.—The prism of the canal through the rock cut at Balsover is being deepened to nine feet and the rock excavated is being used for riprap.

Riprapping.—About six thousand lineal feet of riprap procured from the dredging at Balsover was placed on the water line of the Talbot river from Balsover to lock No. 3.

Cleaning drowned lands.—The stumps and floating debris were removed from some submerged lands in Balsam lake and from there to the Kirkfield lift lock.

5 GEORGE V., A. 1915

GENERAL.

Minor repairs were made to all locks where necessary and to canal property generally, buoys and lighthouses were painted, fences repaired, ditches cleaned, etc.

The drilling plant was engaged in drilling and blasting rock in the Scugog river and at Balsover from May 6 to October 15.

The dredging plant was let to the Public Works Department for work at Geneva Park, lake Couchiching, for about a week, in the month of October, and to Mr. Ed. Conroy to do work in connection with a Public Works Department contract at Orillia from October 27 to November 10.

Repairs due to ordinary wear and tear were made to the floating plant which consists of a dredge, drill boat, 3 tugs, 1 inspection steamer, 3 boarding scows, 4 dump scows and 7 flat scows. A steel derrick was placed upon flat scow No. 15.

The traffic as shown by the number of lockages at the principal locks shows an increase of 7 per cent over the previous year.

I am, sir, your obedient servant,

A. L. KILLALY,
Acting Superintendent.

W. A. BOWDEN, Esq.,
Chief Engineer, Department of Railways and Canals,
Ottawa.

SESSIONAL PAPER No. 20

WELLAND SHIP CANAL.

ST. CATHARINES, ONT., June 30, 1914.

SIR,—I beg to submit, herewith, my annual report on the progress of work on the Welland ship canal.

In my last annual report I gave an outline of the proposed route, dimensions and general engineering features of the canal, as follows:—

“The proposed Welland ship canal as finally located follows the course of the present canal from Port Colborne on lake Erie to Allanburg, half way across the peninsula. From this point an entirely new cutting is to be made, crossing the present canal just below lock No. 25, the water level of the two canals at this point being the same, viz: 568 feet above sea level. The new canal again crosses the present one below lock No. 11, the water of both canals at this point being at an elevation of 382 feet above sea level.

“The proposed canal enters lake Ontario at the mouth of the Ten Mile creek about three miles east Port Dalhousie, the entrance to the present canal. The total length of canal from lake to lake is 25 miles; and the difference in level between the two lakes, 325½ feet, is to be overcome by seven lift locks, each having a lift of 46½ feet. The dimensions of the locks are to be 800 feet in length by 80 feet in width in the clear and with 30 feet of water over the mitre sills at extreme low stages in the lakes. The width of the canal at the bottom will be 200 feet and for the present the canal reaches will be excavated to a depth of 25 feet only, but all structures will be sunk to the 30-foot depth, so that the canal can be deepened at any future date by the simple process of dredging out the reaches.

“A new western breakwater consisting of an immense rubble mound of stone from the excavation north of Port Colborne, and terminating in a timber and concrete headblock located some 2,000 feet farther out in the lake than the present breakwater, will be built to insure quiet water in Port Colborne harbour during storms, which is not the case now, the present breakwater not being far enough out in the lake to deaden the swells.

“The outer harbour at Port Colborne has now a 22-foot depth at ordinary stages of the lake, which is as much as is available at most of the lake ports and in the channels connecting the lakes at the present time, and the deepening of this portion of the harbour may be left for a few years until the connecting channels in the lakes allow deeper navigation.

“The inner harbour at Port Colborne will be deepened to the proposed new depth and the old locks and regulating weir now in the centre of the village will be entirely removed. The rock cut from Port Colborne to Humberstone will be deepened and widened on the west side, and just below Humberstone a thorough cut will be made across the point now forming Ramey's bend to materially straighten the canal. The materials from these cuts will be nearly all rock, and will be used to form the breakwater previously mentioned. A guard lock will be built in the rock cutting a short distance below Humberstone, and when this new cutting is ready for navigation a regulating weir will be built across the abandoned portion of the present canal which will be used as a by-pass to furnish water to the canal. This lock and regulating weir will control the elevation of the summit level of the canal, which it is proposed to keep at the level of extreme low water in lake Erie, viz: 568 feet above sea level.

“From Ramey's bend to Welland the canal will be deepened and widened by excavating a strip along the western bank. Instead of building a new aqueduct at

Welland to carry the canal over the Welland river, it is proposed to raise the level of the river to that of the summit level of the canal, viz: 568 feet, by means of a dam across the river at Port-Robinson. This dam will be provided with a large overflow and regulating weir which will control the elevation of the summit level, allowing any surplus water to overflow into the old Welland river and pass out into the Niagara river at Chippawa as at present; a sufficient quantity of water will be allowed to run constantly to keep the river clean.

"The present aqueduct at Welland will be dredged out, also the bank between the canal and the river, which latter will be utilized between Welland and Port Robinson instead of the present canal, being somewhat straighter and entailing considerably less excavation. At Port Robinson a cut will be made through the present bank between the canal and the river through which vessels will again enter the canal prism.

"The raising of the Welland river above Welland will flood some 1,600 acres of low land adjoining the river bed. This land is flooded every spring by the flood water in the river, and is principally used for pasturage. The township of Wainfleet adjoining the Welland river on the south side, consists principally of low lying ground which drains into the Welland river, and to prevent damage to this land on account of the raising of the river, it will be necessary to open up most of the ditches from the point of their present entrance to the river to the intended high-water mark.

"The turning of the Welland river into the canal will pollute the water which is at present used by the towns of Welland, Thorold and Merriton, and by the city of St. Catharines, for domestic purposes. This may necessitate the construction of extensive filtering plants, which scheme is not looked upon with favour by those interested. An alternative scheme to lay a pipe line from lake Erie to the reservoirs of the different municipalities, through which clean water would be continuously pumped, is under consideration and appears to be the most feasible scheme available.

"Between Port Robinson and Allanburg what is known as the deep cut (deepest cutting 80 feet) will be deepened and widened by cutting a slice off the western bank. Allanburg is now the junction of the present and old Welland canals, and the water required for the latter which is quite considerable on account of the numerous power developments along it, is taken into the canal through a weir at this point.

"In connection with the construction of the ship canal, it is proposed to close the present old canal entirely between Allanburg and Marlatts bridge near Thorold, first building a new weir at the head of lock No. 25 of the present canal to supply the above-mentioned water. A dam will then be thrown across the old canal at Allanburg, and the old bed of the canal between the dam and Marlatts bridge will be utilized as a dumping ground in which to place the material removed from above water in widening the deep cut. This will form a very convenient dumping ground, and the old canal will become more self-contained, as at present the entrance works are situated at an inconvenient distance from the remainder of the canal.

"If it is desired to continue navigation on the old canal, entrance may be had to it through lock No. 25 of the present canal when the ship canal is completed, by making a short cut through the bank separating the two waterways.

"A pair of twin guard gates are located on the proposed canal near the southerly limits of the town of Thorold, and a short distance north of them is located lock No. 7, the head of this lock being directly opposite the head of lock No. 24 on the present canal. That portion of the present canal between locks No. 25 and No. 24, together with a pond of about 27 acres formed by flooding the upper valley of the Ten Mile creek, will be utilized as a regulating basin from which water to fill lock No. 7 will be drawn. This method of drawing water from a side pond instead of directly from the canal above avoids the formation of objectionable currents and surges in the canal and locks, and is the method adopted for filling all of the locks.

"Below lock No. 7 is a short reach of canal with an adjacent side pond or regulating basin having a surface area of about 84 acres, and immediately below are located

SESSIONAL PAPER No. 20

Twin locks Nos. 6, 5 and 4, in flight. These three locks overcome a descent of 139½ feet. One flight will be used for downbound vessels and the adjoining flight for up-bound, a double flight being required to save long delays in the passage of vessels through the canal.

"The main line of the Grand Trunk railway between St. Catharines and Niagara Falls will cross over the foot of Twin locks No. 4, by means of two short bascule lift bridges.

"The Welland division line of the Grand Trunk railway is situated just where the new locks are to be built, and it will be necessary therefore to divert it some distance to the west, and the diverted line will bear the same relation to the proposed canal as the present line does to the present canal, following up on the west side of the locks, but remaining on the west side of the canal for some distance above the present lock No. 25, when it crosses over the proposed canal on a Bascule lift bridge to the east side.

"From lock No. 4 the proposed canal crosses the meadow to the north, following in part the bed of the Ten Mile creek till it crosses the present canal at the foot of lock No. 11, at an elevation of 382 feet above sea level, which is the level of the present canal at that point. This will enable small vessels which wish to do so, to use the Port Dalhousie entrance as at present, as far as lock No. 11.

"Lock No. 3 is located immediately north of the present canal, and at its head on the east side is situated an equalizing basin or pond of 150 acres. Below lock No. 3 a heavy cutting is required through the village of Homer to the bed of the Ten Mile creek again, above Carleton street, and just below Carleton Street Lock No. 2 is located. It was difficult to find a location for this lock on account of the lack of rock for a foundation, but eventually a suitable foundation was found at the present site. The canal at the head of lock No. 2 is at an elevation of 335½ feet above sea level, and floods about 200 acres of land in and adjoining the bed of the Ten Mile creek. Below lock No. 2 the canal follows the bed of the creek to the lake, lock No. 1 being situated just below the lake road. The pond at the head of lock No. 1 covers an area of 107 acres.

"The outer entrance piers in lake Ontario are placed about one and one-half miles from shore, where the depth of water is 30 feet. A wide channel will be dredged from these piers to lock No. 1. The sides of this channel will be protected near the shore end by reinforced concrete cribs with concrete superstructures, alongside which vessels may lie. From the shore line of the lake to the outer entrance piers an embankment about 500 feet in width will be formed on either side of the channel from material excavated from the canal between the lake and Thorold.

"For the purpose of conveying this material from the different contracts to the lake, the department will build a double track railway along the west side of the canal from the foot of the flight locks near Merriton to the lake, and temporary trestles will be built out in the lake on either side of the harbour from which to start the dumps. The railway will also be utilized to haul crushed stone from the site of the flight locks to locks Nos. 1, 2 and 3, where it will be used for the purpose of making concrete.

"The contractor for the rock excavation from the site of the flight locks will, under his contract, be obliged to crush a sufficient quantity of the good rock taken from his excavation to supply all the crushed stone required for making all the concrete for the different locks and structures.

"The lock walls will be 82 feet high above the top of the gate sills, and including the necessary foundation work required below this level two of the locks will have walls 100 feet high.

"The lock gates will be of the single leaf type, swinging on a hinge at one side of the lock, and resting in a notch cut in the opposite wall, a single leaf thus spanning the whole width of the lock chamber. The gate at the foot of each lock will be 83 feet in height and 88 feet in length, and will weigh about 1,100 tons.

"The valves and culverts in the walls are of large dimensions and will permit of the lock being filled in less than eight minutes. This will mean that the time of passage through the canal will be very much reduced below that required at present.

"The canal will be divided into nine sections for contract and construction purposes.

"The contractor for each section will be required to supply all plant and labour to efficiently carry out the work of excavation and the construction of all structures such as locks, weirs, substructures of bridges, entrance piers, etc. He will also supply all necessary materials required in the construction of the above, excepting Portland cement and certain metal work which will be furnished by the department.

"The furnishing of Portland cement to contractors has been found a very satisfactory method on other contracts with the department and this method will be adopted in all contracts on the ship canal.

"All steel and iron castings and other metal work which is standard for all locks, etc., will also be furnished to the different contractors to be placed in position in the concrete masonry of locks, weirs, bridges, etc.

"The building and erection of lock gates will form a separate contract.

"The steel superstructure of bridges will be built under separate contracts.

"The following estimated quantities will give an idea of the magnitude of the work:—

Rock excavation	6,000,000	cubic yards.
Earth "	40,000,000	" "
Concrete "	2,200,000	" "

"A careful and conservative estimate places the total cost of the work at less than \$50,000,000.

"The canal should be ready for navigation in five years."

In May, 1913, the department called in, as consulting engineer, Mr. Alfred Noble (since deceased), a very prominent engineer who has been connected with practically all the large canal undertakings in the United States for many years, to report upon the design and plans of the proposed canal, and upon receipt of Mr. Noble's report, which fully endorsed my plans and proposals, the department decided to call for tenders for several of the important sections of the work.

For construction purposes, the work was divided into nine contract sections, section No. 1 being at the lake Ontario end of the canal and section No. 9 at the lake Erie end, and during the fall of 1913 contracts were awarded for sections Nos. 1, 2, 3 and 5. Sections Nos. 1, 2 and 3 include the lake Ontario entrance and all of the seven lift locks; also the grading for the Welland Ship Canal construction railway. Contracts were also awarded for the necessary ties, rails, etc., for the construction railway.

Section No. 1 extends from station 0 to 150, approximately three miles, and covers about one and one-half miles of subaqueous work in lake Ontario, and about one and one-half miles of dry work on shore. This section embraces the construction of the lake Ontario harbour and entrance, single lock No. 1 and weirs, bridges Nos. 1 and 2; also the excavation of the canal proper, building of watertight embankments, roadway diversions, etc., and the grading of the construction railway alongside the section.

Section No. 2 extends from station 150 to station 380, approximately four and one-third miles, and embraces the construction of single locks Nos. 2 and 3, together with the necessary entrance walls, regulating and supply weirs, substructures for bridges Nos. 3, 4 and 5, construction railway swing bridge over present canal, and pond bridge at lock No. 3, the excavation of canal prism, building of water-tight embankments, roadway diversions, and the grading of the construction railway alongside the section.

Section No. 3 extends from station 380 to station 490, approximately two miles, and includes the construction of twin locks in flight Nos. 4, 5 and 6, single lock No.

SESSIONAL PAPER No. 20

7, twin guard gates, and the necessary retaining and entrance walls, weirs, conduits, concrete bridges, steel bridge substructures, etc., and the relocation of the Welland division of the Grand Trunk railway from a point near the town of Merriton to the southern end of the section, between which points its present position interferes with the location of the ship canal; also the grading of the southern end of the construction railway. This section also includes the building of a large earth dam, opposite the head of lock No. 6, for the purpose of forming a pond to control the elevation of the canal at the head of the flight locks.

Section No. 4 extends from station 490 to station 640, approximately three miles, and embraces the excavation of the canal proper in a through cut of earth and rock between these points, together with the building of substructures of bridges Nos. 10, 11 and 12.

Section No. 5 extends from station 640 to station 775, approximately two and one-half miles, and the work consists of the excavation necessary to widen and deepen the present channel between Allanburg and Port Robinson, through what is known as the "Deep Cut." The excavated material, principally earth, is to be used in filling up the low land between the present canal and the old canal, north of Allanburg; also the filling of the old canal itself north from Allanburg to Marlatt's bridge. This section also embraces the building of the substructure for bridge No. 13, at Port Robinson.

Section No. 6 extends from station 775 to station 980, a distance of about four miles, and will include the building of a dam and weir across the Welland river near Port Robinson in order to raise the river to elevation 568 above sea level, which is assumed to be extreme low water level in lake Erie. It will also comprise the excavation necessary to form the canal prism on its new location in the Welland river between Port Robinson and Welland; the removal of a portion of the old aqueduct at Welland, and the construction of substructure for bridge No. 14 at Welland; also the diversion and raising of the present river road west of Welland where it will be flooded and such other work along the river banks as may be necessary to prevent the raising of the water level doing damage to adjoining property.

Section No. 7 extending from station 980 to 1210, approximately four and one-third miles, embraces the deepening and widening, on the west side, of the present canal between Welland and Lyon's creek, together with the substructures for bridges Nos. 15, 16, 17 and 18.

Section No. 8 extends from station 1210 to station 1310, approximately two miles, and consists of the excavation of a new cutting in earth and rock through the point formed by Raney's bend on the present canal, in order to straighten the channel for the use of large vessels. The excavation includes a large amount of rock work and in the rock cutting will be built a guard lock to take the place of the present locks at Port Colborne. When the new channel is open for navigation a regulating and supply weir will be built across the present channel and this, with the guard lock, will be utilized to maintain the level of the canal between this point and the guard lock at Thorold at elevation 568, which is assumed to be extreme low water in lake Erie.

Section No. 9, extending from station 1310 to deep water in lake Erie, embraces the excavation necessary to deepen and widen on the west side the present channel between Humberstone and Port Colborne, together with the removal of the present locks at Port Colborne. The excavated material will be used to build a spur on the western breakwater.

Section No. 1.

Tenders for section No. 1 were invited by public advertisement on June 2, 1913, and on August 1 a contract was entered into with the Dominion Dredging Company, Limited, of Ottawa, for the various works included within this section.

During the summer of 1913 a two-storey office building was erected immediately east of the canal prism and north of the Lake Shore road, to be used as engineering offices on the lower floor, and quarters for part of the staff on the upper floor.

Mr. C. L. Hays, who had been acting as assistant engineer on the headquarters staff, and who had previously had considerable canal experience, was placed in charge of this section in September last as resident engineer.

The contractors arrived on the ground early in September last, and immediately commenced the construction of the necessary buildings and shops for their operations.

During the fall the ladder dredge *Brussels* and the dipper dredges *Delver*, *Dominion* and *Fundy* arrived on the work, but, owing to the lateness of the season, little real work was accomplished, and the dredges were laid up for the winter at Port Dalhousie about the middle of December.

The following plant for dry excavation has also been placed on the work and is in active operation:—

- 1—15 ton Brownhoist locomotive crane.
- 1—Model 85-C Bucyrus steam shovel.
- 1—Class 24 Bucyrus drag-line excavator.
- 1—No. 2 Marion-Osgoode steam shovel.
- 3—60 ton locomotives.
- 6—40 ton locomotives.
- 45—12 yard dump cars.
- 8—16 yard dump cars.
- 2—Western spreaders.

The Bucyrus shovel commenced work December 22 and worked until February 20, in the canal prism, west side, between stations 76 and 86. On February 20 it moved to the east side at station 88, where it has been engaged continuously to date, between stations 85 and 95, all of the excavated material going into fills for dykes on either side of the harbour.

The Bucyrus Drag-line excavator was assembled and commenced work on January 12, making a cut for the west entrance wall for lock No. 1, and has been continuously engaged at this since that date, having excavated 800 feet of this trench to grade, which is now ready for the construction of the entrance wall. Part of the material handled has gone into construction railway fill, and the balance into harbour dykes.

Shovel No. 2 commenced work on December 29 and has been engaged in excavating a drainage ditch through the flats from the Lake Shore road, southwards, and in the canal prism, west side, between stations 107 and 128, and is now working day and night, the excavated material going into construction railway fills.

The 15-ton locomotive crane, with clam-shell bucket, excavated a cutting for the construction railway, when not otherwise engaged, between stations 76 and 81-50, and is at present excavating drainage ditch along the east side of the watertight embankment above lock No. 1.

Dredging operations for this season were resumed on April 23, when the dipper dredges *Delver* and *Dominion* commenced work excavating the foundation for the cribs for docking on the east side of the harbour, the material being dumped on the line of the trestle, west side.

The dredge *Fundy* commenced work on May 4.

The contractors are at present building the trestles in the lake on the east and west sides of the entrance channel, which are to be used for the purpose of dumping excavated material from sections 1 and 2 to make side dykes or embankments forming the harbour, and which will eventually extend to deep-water a mile and a half out into the lake.

The contractors on this section have a splendid new plant of excavating machinery, locomotives and dump cars, and are making a very satisfactory showing.

Section No. 2.

Tenders for section No. 2 were invited on September 22, 1913, the successful tenders being Messrs. Baldry, Yerburch and Hutchinson, of Westminster, England.

One of the buildings acquired in connection with the purchase of the right of way at Homer has been utilized for the purpose of engineering offices on this section, and on March 10 last Mr. E. G. Cameron, late of the engineering staff of the Trent canal, was placed in charge as resident engineer.

The contractors commenced operations early in December, 1913, erecting camps and other buildings, and at present have the following excavating equipment on the work.

- 1 90 ton "Marion" steam shovel, No. 1.
- 1 70-ton "Bucyrus" steam shovel, No. 2.
- 1 model C-85 "Bucyrus" steam shovel, No. 3.
- 1 Atlantic steam shovel, No. 4.
- 1 70-ton "Bucyrus" drag-line excavator, No. 1.
- 1 Model 24 "Bucyrus" drag-line excavator, No. 2.
- 9 40 to 60-ton locomotives.
- 7 18 to 45-ton locomotives.
- 60 12-yard dump cars.
- 6 30-yard dump cars.
- 12 16-yard dump cars.
- 55 6-yard dump cars.
- 1 Western spreader.
- 1 Jordon spreader.
- 6 Elevating graders.
- 3 Traction engines.

Steam shovel No. 1 commenced excavation on January 23, 1914, at station 151, east side of canal prism, material going into construction railway fills and west embankment. Work was stopped from February 6 until April 6, owing to frost. Since latter date this shovel has been engaged continuously excavating to grade between sections 151 and 170.

Steam shovel No. 2 started work on February 9th at station 306, canal prism, and has worked continuously since that date making cuttings between stations 306 and 336, all material going into construction railway fills north and south of the Queenston road.

Drag-line excavator No. 1 commenced work on March 5, excavating on section 1, but a great deal of time was lost owing to the frost and spring freshets. On March 21 this machine moved to section No. 2 at station 150, excavating east slope of prism to grade, to the site of lock No. 2.

Steam shovel No. 3 started on May 6, working south from station 280, canal prism, west side, and to date has made several cuts to station 292.

Drag-line excavator No. 2 was assembled and started work on April 23 in canal prism at station 294. It is trimming the east slope of the canal and excavating gravel for ballasting the construction railway.

Shovel No. 4 started in June excavating north along the canal prism, west slope, from station 368, the excavated material going into construction railway.

Drainage ditches have been excavated and culverts built along west side of canal to take care of drainage cut off by railway and canal banks.

Excellent progress is being made on this section.

Section No. 3.

Tenders for this section were invited on August 2, 1913, Messrs. O'Brien & Doheny and Quinlan & Robertson, of Montreal, being the successful tenderers, and a

contract was entered into with this firm on October 4, 1913, for the various works comprised within this section.

As the location of the canal through the town of Thorold follows along Wellington and Chapel streets for a considerable distance, it was necessary to either demolish or remove a number of houses and other buildings situated on the right-of-way, and as the majority of these buildings were in fairly good condition it was decided to move some of them on to Government property, and utilize them for offices and quarters for members of the staff. Others have been moved to Welland street, sufficient land to accommodate them having been acquired by the department, and these will probably be disposed of by public sale in the near future.

An office building for the engineering staff was opened in November, one of the houses acquired in the purchase of the right-of-way through the town of Thorold being utilized for this purpose, and Mr. H. M. Belfour, formerly of the Trent canal, was placed in charge as resident engineer.

The contractors immediately commenced the erection of buildings and a large machine shop, and during the latter part of September their plant commenced to arrive on the work.

The contractors for this section have the following excavating plant on the ground:—

- 5 60-ton "Marion" steam shovels.
- 1 20-ton "Marion" steam shovel.
- 1 170-ton "Marion" drag line excavator, 115-foot boom.
- 1 140-ton "Beatty" drag line excavator, 100-foot boom.
- 2 40-ton standard locomotives.
- 16 12 to 30-ton locomotives.
- 12 12-yard dump cars.
- 150 6-yard dump cars.
- 20 4-yard dump cars.
- 2 traction engines (Sawyer-Massey).
- 1 Browning locomotive crane.

On October 3 the first steam shovel was placed in position and started excavating in cut for Grand Trunk railway relocation at station 86-50, railway chainage.

Steam shovel No. 2 commenced operations on October 9 at station 136-50, working north on G.T.R. relocation, material going into fill between station 136-50 and Thorold reservoir at station 140-00, also into west embankment of canal to elevation 482 as far south as Thorold reservoir. This shovel also made a cut for the relocation of the Colonial Wood Products Company's spur. Work was also commenced making a cut in the rock west of the Grand Trunk railway at station 443-00, canal chainage, for contractor's service track, which will cross under the G.T. Ry. at St. David's road, and thence to site of dam at head of lock 6, to be used for hauling excavated material to the dam for water-tight embankment.

Three other shovels were assembled and commenced work during the month of November, and at present the contractors have six steam shovels in operation on this section.

As the Grand Trunk railway double track main line to Niagara Falls crosses the proposed canal at the foot of twin locks No. 4, it was deemed advisable to make a slight diversion of this line to the north, and a steel double track railway bridge is being erected to carry the main line over the canal during construction. This bridge consists of four single track through truss spans and four single track girder spans, each of the tracks to be carried on a separate line of single track spans, so designed that when no longer required at the present location they can be used elsewhere as single track railway bridges. When twin locks No. 4 are completed Bascule lift bridges will be built to carry the railway over the locks on the old location.

SESSIONAL PAPER No. 20

The contractors commenced excavation for centre pier of this bridge in January, 1914, and it is expected that it will be brought into service in September.

As the contractors for section No. 3 are required under their contract to supply and crush all rock to be used for concrete on sections 1, 2 and 3, they are installing an extensive rock crushing plant, north of Grand Trunk Railway main line. It is expected that this plant will be in operation in September.

The concrete corewall, for the large earth dam at the head of lock No. 6, which is founded on solid rock at depths from five to thirty feet below the base of the dam, is now nearly completed and good progress is being made on the building of the dam itself. The earth for the dam is being obtained from the excavation in the section which is rehandled into the dam by large clam shell excavator, and spread, rolled and watered.

The large amount of work required to relocate the Welland division of the Grand Trunk railway is now nearly completed and it is expected that the railway will be using its new line in October. Until the change is made the contractors are considerably hampered in their work as the present line runs diagonally across nearly the whole length of the section.

Section No. 5.

Tenders for this section were invited on October 29, 1913, the successful tenders being the Canadian Dredging Company, Limited, Midland, Ont.

Five 60-ton "Marion" steam shovels are now at work on this section.

Section No. 4A.

This section consists of the construction of two reinforced concrete culverts across the flats between the present and the old canals, north of Allanburg, to take the place of the open ditches at present existing and which carry the drainage emanating on the east side of the present canal, and a supply weir near lock No. 25 of the present canal to feed the old Welland canal.

The supply weir is located in the rear of the bank between the old Welland canal and the raceway west of lock 25 of the present canal, and this and the culverts are necessitated by the fact that the old canal between Allanburg and Port Robinson will be closed and used in connection with the low land between the two canals as a dumping ground for material excavated from section No. 5.

The contract for this section was awarded to Messrs. Maguire & Cameron on April 17, 1914, and good progress is being made.

Construction Railway.

The Welland Ship Canal construction railway is being built by the department between the lower end of section No. 3, near Merritton, to Lake Ontario for the use of the contractors for sections Nos. 1, 2 and 3 in hauling excavated material from their sections to the lake, where it is deposited to form dykes or embankments on either side of the proposed harbour.

The railway will also be used by the contractors to haul stone from the crusher, located at the lower end of section 3, to their various works; also for the hauling of sand, cement, steel, etc.

Extending outward from the shore on either side of the new harbour on Lake Ontario, timber trestles are being built from which the first dumping of material for the side embankments takes place. As the trestles are filled up the dumping tracks are gradually moved sideways and the embankments widened. Eventually each side embankment will be three or four hundred feet in width and a mile and a half in length.

5 GEORGE V., A. 1915

The dredged material from the harbour is also being placed in these embankments.

The railway is now partially completed and the building of the embankments in the lake has been commenced and works very satisfactorily.

There was some doubt as to the effect of wave action on the unprotected faces of the embankments being built, but experience so far has shown that this will not be at all serious. Eventually the sides of the embankments will be rip-rapped with stone from the excavation.

At the crossing of the present canal, below lock No. 11, a double track steel swing bridge has been erected. The pile and concrete substructure was built by the contractors for section No. 2, and the steel superstructure by the Hamilton Bridge Works Company, Limited.

The grading for the railway has been done by the contractors for sections Nos. 1, 2 and 3 under their contracts, the ballasting by contractors for section No. 2 from a gravel pit in the canal prism.

Track materials were purchased by the department and track-laying done by day labour.

The railway is now being provided with an interlocking system, which will be operated by the department.

It is expected that trains will be run at five-minute intervals to accommodate the traffic next season.

GENERAL.

The Governor General visited the canal works on May 12. Unfortunately the day was cold and wet and the work was not seen to advantage by His Royal Highness.

Dr. J. McCoombe, who is in charge of the Medical Service for the contractors on sections 1, 2 and 3, has erected and equipped commodious hospital buildings on private property on the Queenston road, west of the canal prism, for the proper care and treatment of employees taken sick or injured on the canal operations. In addition, field hospitals are established at different points along the work.

The contract prices obtained for sections Nos. 1, 2, 3 and 5 have fully justified my estimate of cost of \$50,000,000 for the completed canal, and the work so far done justifies my estimate of date of opening of canal, namely, 1918.

I am, Sir,

Your obedient servant,

J. L. WELLER,
Engineer-in-charge.

W. A. BOWDEN, Esq.,
Chief Engineer,
Dept. of Railways and Canals,
Ottawa, Ont.

SESSIONAL PAPER No. 20

WELLAND CANAL.

SUPERINTENDING ENGINEER'S OFFICE,
ST. CATHARINES, June 27, 1914.

SIR,—I have the honour to submit my report upon the maintenance and operation of the Welland canal and its branches for the fiscal year ended March 31, 1914.

NAVIGATION SEASON.

The canal opened for navigation on the 15th of April and closed 18th December, 1913.

ACCIDENTS.

A minor accident occurred on April 28. The steamer *Ames*, bound down, collided with the left hand gate of lock No. 5, breaking the hanging gear and carrying gate out of position. The damage was slight. Navigation was delayed sixteen hours on account of having to draw the water off the level above to bring in the gate lifter.

On June 15, 1913, the steamer *Lloyd S. Porter*, up bound, carried away the four gates of lock No. 1. On account of the large body of water released from both the old and new canals, repairs could not be commenced for about twelve hours. Four spare gates were placed and navigation resumed, having been interrupted for about thirty-six hours. The steamer was slightly damaged.

An unusual accident happened on August 2, 1913, when the steamer *Lehigh*, down bound, struck and carried away the lower gates of lock No. 23. They were replaced by spare ones and navigation resumed in eighteen hours. The vessel was damaged and leaking. She remained in the level between locks 22 and 23, clear of the navigable channel, until August 11, when temporary repairs were made to her and she passed out of the canal.

Another lesser accident, caused by the breaking of a hood, at lock No. 20, on August 30, 1913, made it necessary to put in a spare gate, delaying navigation for a few hours.

SLIDES.

The two slides which occurred on the summit level, in February, 1913, one on the west side about 1½ miles north of Welland aqueduct, and the other on the east side of the canal, at the south end of the deep cut, were removed by Mr. M. J. Hogan's dredging outfit sufficiently to provide safe navigation before the opening of the canal, in April, 1913. Later in the summer, the removal of the slide at Welland was completed.

IMPROVEMENTS.

A contract was entered into with Messrs. James Battle and N. W. Gowan, for the supply of steel castings forming the Gowan Lock Gate Safety Device. Enough castings were supplied to equip five additional locks. The masonry on locks Nos. 5, 7, 9, 10, 17, 18, 19, 20, 21, 22, 23, and 24 is prepared for the installation of the device. At the beginning of navigation for the season of 1914-15, the appliance had been equipped on the head gates at locks Nos. 5, 7, 9, 10, 17, 19, 21 and 24.

During the winter of 1913-14, while the canal was closed for navigation, the Grand Trunk Railway Company, at their own expense, replaced the single track railway swing bridge over the new canal between locks 5 and 6, with a similar one of stronger and more modern design and repaired the seat piers and abutments. The centre pier and cribs were not touched and the same clear width of channel on each side remains as before.

PORT COLBORNE ELEVATOR.

The Government elevator again showed a very large increase in business, receiving 21,441,826 bushels, as compared with 11,602,516 bushels the previous year. This amount exceeds by far any of the other Canadian lower lake port elevators, although some of these have a capacity five times greater than the Port Colborne elevator. I understand that there was but one lower lake port elevator, at Buffalo, which surpassed the Government elevator by a small margin.

The work on the erection of the addition to the elevator, giving a storage capacity of 2,000,000 bushels, was in progress during the year.

The receipts for handling grain paid all operating and repair expenses for the year and left a net surplus of \$53,047.06, an increase over the previous year of \$24,950.98.

REPAIRS—NEW CANAL.

Ordinary repairs to the structures on the new canal were carried out during the year. Lock No. 21 was unwatered in March, 1914, and the foundation of the upper recess, which had been undermined, repaired in concrete. Repairs in concrete were also made to part of the foundation of the lower recess. The foot-bridges over the weirs at locks Nos. 6, 7 and 24, and road bridges over locks Nos. 2, 19 and 21 weirs, which were badly decayed and unsafe, were renewed by reinforced concrete bridges. A two span bridge, carrying Geneva street over the by-pass near lock No. 6, which was in a very rotten and dangerous condition, was replaced by a reinforced concrete bridge.

REPAIRS—OLD CANAL.

The water was not drawn from the old canal in the spring of 1913, the foundation of the locks and weirs being considered to be in a safe condition.

The usual repairs to the weirs on the old canal were made during the year.

A reinforced concrete highway bridge was built over a creek a short distance below lock No. 5, to replace an old wooden structure, which was very badly decayed and unsafe for those using it.

Foot bridges over the weirs at locks Nos. 21, 22, 23, 24 and 25, which were in bad repair, were replaced by reinforced concrete bridges and are very satisfactory.

A large amount of sand, which had been washed by freshets down the Twelve Mile creek and old canal, was deposited at the head of and in the chamber of lock No. 2. During the summer it was removed by pumping and sold.

A reinforced concrete highway bridge was built over the hydraulic raceway at Clayburn avenue, the necessity having arisen from the growth of the city in this district.

WELLAND CANAL FEEDER.

The repairs of the damages caused by the flood on the Grand river early in March, 1913, were completed. A reinforced concrete spillway, to increase the facilities for the discharge of flood water from the upper to the lower river at Dunnville, was constructed during the summer, at the upper or westerly end of the Government island, and proved itself to be of great value in passing ice and water this spring. The freshet this spring, (1914), did practically no damage and was nothing in comparison with the 1912 and 1913 floods, when great damage was done, both to Government works and to the town of Dunnville.

A 30 inch concrete tile was built on Canal street east between Tamaraek and the syphon culvert, under the feeder at the foot of Niagara street, in the town of Dunnville, and the old ditch filled in.

A contract was entered into with Mr. R. H. Nelson, for the construction of a reinforced concrete syphon culvert under the Dunnville branch of the feeder at

SESSIONAL PAPER No. 20

Broad creek, near Stromness, Ontario, and was satisfactorily completed. It supplements an old wooden culvert and did good work this spring in passing quickly the run-off from the surrounding country.

GENERAL.

The water in both lakes Erie and Ontario averaged about nine inches higher than in the previous year, dropping towards the end of the navigation season to about the same as the year before.

The following employees were superannuated:

Mr. Chas. H. Collier, on October 1, 1913.

Mr. John Collins, on October 1, 1913.

The following superannuated employees died during the year:—

Mr. James Ward, on April 7, 1913.

Mr. James Edmonds, on November 29, 1913.

Attached is a statement of moneys collected for damages to canal property by different vessels; also a statement showing the highest and lowest recorded depths of water on the mitre sills of the locks at Port Dalhousie and Port Colborne for each month of the year.

Respectfully submitted,

L. D. HARA,

Acting Superintending Engineer.

W. A. BOWDEN,
Chief Engineer,
Dept. Railways and Canals,
Ottawa, Ont.

SAULT STE. MARIE CANAL.

SUPERINTENDING ENGINEER'S OFFICE,
SAULT STE. MARIE, ONT., March 31, 1914.

SIR.—I have the honour to report upon the maintenance and operation of the Sault Ste. Marie canal for the fiscal year ending March 31, 1914.

The canal was opened for traffic on April 13, and closed on December 14, having been in operation for 246 days.

The traffic passing Sault Ste. Marie, through the Canadian and United States canals, was the largest on record. The total freight tonnage amounted to 79,718,344 tons, an increase of 10 per cent; the passengers numbered 77,194, an increase of 15 per cent; and the registered tonnage of vessels amounted to 57,989,715 tons, an increase of 0.4 per cent.

The Canadian registered tonnage through both canals amounted to 4,326,245 tons, an increase of 632,641 tons, or 17 per cent.

The freight tonnage through the Canadian canal amounted to 42,703,641 tons, an increase of 8 per cent; the passengers numbered 36,853, a decrease of 2 per cent; and the registered tonnage amounted to 25,927,096 tons, an increase of 0.5 per cent.

There were only two accidents to vessels during the season, and none with serious results.

On July 6th, the steamer *G. A. Tomlinson*, after entering the lock, upbound, was forced back against the lower main gates by the premature opening of the upper valves. The stern of the vessel was damaged and the points of both gates slightly damaged.

On October 31st, while the steamer *Yorkton* was passing down, the railway bridge was closed too soon, striking the port bow of the vessel and doing some damage.

On November 6th, the upper north valve was put out of commission by the valve rod coming apart, and as the traffic was light the lock was operated during the balance of the season with one upper valve. When the lock was unwatered at the close of the season it was found that the key connecting the crank to the main shaft had come out.

During the season the new timber top on the lower north pier was completed.

A number of complaints were made by masters of vessels to the effect that they had grounded above the dock on the north side of the canal, while awaiting their turn. After the close of the season a "clam shell" was put to work and cleaned up a considerable amount of material from this location. The floats, used to keep vessels from rubbing against the wall, will be made wider; and several new floats were built during the past winter for this purpose.

During the lying up of the canal season, in addition to the cleaning out of the culverts, repairs were made to the lock floor, mitre sills and the division wall between the centre culverts.

The usual spring painting and repairs are in progress preliminary to the opening of navigation.

As the top of the timber portion of the lower south pier needs renewing, it is proposed to tear out the top of the old cribwork down below the water line and rebuild with concrete. About one hundred feet in length of this concrete top is under construction and will be completed before the opening of navigation.

By way of improving the canal grounds, a concrete roadway and sidewalks were constructed between the line of Huron street and the movable dam. The balance of this work from the movable dam to the west end of the grounds, and from Huron street eastward, remains to be built.

SESSIONAL PAPER No. 20

A large lumber shed, 30 feet by 125 feet, was built at the east end of the grounds to hold the stock of lumber, etc.

The lookout station at Point Aux Pins and the patrol service were operated last season with very satisfactory results. Very few vessels came to the lock out of their turn, and the congestion of traffic which usually occurred twice a week was handled without difficulty.

I have the honour to be, sir,

Your obedient servant,

J. W. LE B. ROSS,

Superintending Engineer.

W. A. BOWDEN, Esq.,

Chief Engineer,

Department of Railways and Canals,

Ottawa, Canada.

CAR FERRY TERMINALS.

CAPE TORMENTINE, N.B.—CARLETON PT., P.E.I.

CAPE TORMENTINE, N.B., July 6, 1914.

SIR,—I have the honour to submit my annual report on the construction of the car ferry terminals on the straits of Northumberland, at Carleton Point, P.E.I., and at Cape Tormentine, N.B.

Terminal at Cape Tormentine:—

A contract was entered into with Mr. A. T. Mackie, April 20, 1913, which includes the construction of a timber pier approach to the ferry landing, extending out from the present pier 727 feet on the sea side and 235 feet on the harbour side providing a berth for the ferry at the landing stage; the construction of a rubble mound breakwater 700 feet in length, which encloses and provides a protection for a turning basin for the ferry, and the dredging out of the turning basin, and the approach thereto from deep water to a depth of 20 feet at L.W.O.S.T.

The principal items of work done are the dredging of 1,600 cubic yards of material in the turning basin; the building of 500 feet of cribwork within the present breakwater to provide the required space in the approach to the landing, and the delivery of a large quantity of materials required for the construction.

The contractor's quarry, where the stone to be used in the construction of the breakwater and other parts of the work is being procured, is situated in Saekville, 38 miles from the works and connected therewith by the New Brunswick and Prince Edward Island railway.

Carleton Point Terminal:—

A contract was entered into with Roger Miller and Sons on September 2, 1913, which includes the construction of a rubble mound approach extending 1,600 feet from the shore, followed by 637 feet of pier on the sea side and 220 feet on the harbour side, which provides a protected berth for the ferry boat at the landing stage; the construction of a rubble mound breakwater 700 feet in length, which encloses and provides a protection for a turning basin for the ferry, and the dredging out of a turning basin and the approach thereto from deep water to a depth of 20 feet L.W.O.S.T.

The first work undertaken was the securing of a quarry from which to provide the large quantity of stone which is the principal item in this contract. The Scoudae river quarry, situated $3\frac{1}{2}$ miles from Point du Chene, was selected and work was immediately started in stripping the overburden of earth, installing the necessary plant, and reconstructing the spur line connecting with the Intercolonial railway used in the transportation of the stone to the pier at Point du Chene, where the unloading plant has been erected to transfer the stone from the cars to the scows and barges used in transportation to the works at Carleton point. The distance of haul from Point du Chene to Carleton point is 40 miles, for which the contractor has provided himself with an adequate floating plant that will assure the delivery of the stone.

Carleton Branch Line Railway:—

The construction of the branch line of railway connecting the Cape Traverse branch of the Prince Edward Island railway was started on December 1, 1913. The right of way has been cleared and 4,840 cubic yards of material removed.

I have the honour to be, sir,

Your obedient servant,

F. B. FRIPP,

Engineer-in-charge.

W. A. BOWLES, Esq., C.E.,

Chief Engineer, Dept. Railways and Canals,

Ottawa.

HUDSON BAY RAILWAY.

OFFICE OF THE CHIEF ENGINEER,

WINNIPEG, June 24, 1914.

DEAR SIR,—I have the honour to submit my annual report for the fiscal year ending March 31, 1914, on the progress of the work on the Hudson Bay Railway.

CLEARING AND GRADING.

The right-of-way has been cleared up to the first crossing of the Nelson river at mile No. 242; grading has been completed up to mile No. 130, and there are only a few short muskeg fills to make, to complete same up to mile No. 150. Beyond this point there are 50 cuts now being worked (19 on the first and 31 on the second contract) the latter having been opened this month.

There are considerable stretches of muskeg still to be graded on the first contract between mile No. 150 and No. 185, which cannot be started until the frost comes out in June. On the second contract the character of the country changes and a large proportion of the rock work on same can be proceeded with this winter.

Contractors are now putting in supplies for the active prosecution of the work up to mile No. 242 during the coming season, and they have also established caches up to Landing river, mile No. 280, which will all be stocked with supplies by the end of April.

TRACK-LAYING.

Track-laying was resumed last month and steel has now been laid up to mile No. 102. Two hundred thousand ties have been received at Le Pas since last month, and this work will now be pushed forward.

BALLASTING

The track has been surfaced up to mile No. 56, from pits at Le Pas, mile No. 22 and mile No. 30, but these pits are now exhausted and contractors are at work clearing the right-of-way for track into Reader's lake, near mile No. 7, where there is an unlimited supply of first-class ballast.

There is a large deposit of coarse sand alongside the main line at Mile No. 110 which will be used for the first lift and I also expect to be able to get material around mile No. 72.

BRIDGES AND TRESTLES.

The bridge over the Saskatchewan river at Le Pas was completed early in the year. Trestles have been erected at mile No. 100 and No. 101, and the one over the Woody river at mile No. 116 is now being erected.

The revised bridge survey for the first crossing of the Nelson river at Manitou rapids has been completed and the narrowest crossing of the river (300 feet) has been got by raising the grade line and increasing the curvature of the approaches, and at the same time reducing the yardage in the rock cuts on both sides of the river.

SURVEYS.

Several revisions have been made this winter at various points on the line, with the result that curvature has been cut out and quantities decreased.

A location party are now at work revising the line between Kettle Rapids and Port Nelson. I have also had the river examined between Kettle Rapids and Port Nelson, with a view to getting a more favourable crossing than at Kettle Rapids, but reports received have been unfavourable, and ice conditions very bad; however, I hope to improve this crossing by taking advantage of two small islands, which will mean cutting down the span by about 200 feet.

GENERAL.

Since taking charge of this work in November last, I have to report good progress for the winter months, which are fairly rigorous in this part of the country.

I have made a few changes in the staff, by which I hope to have a better working organization, and have also gone over all the line where work will be carried on during the coming season, and impressed the contractors with the absolute necessity of crowding on the men when the frost goes out, about the first of June, so that the maximum amount of work can be accomplished during the short season which we have, from June to October.

Your obedient servant,

J. W. PORTER,
Acting Chief Engineer.

W. A. BOWDEN, Esq.,
Chief Engineer,
Dept. Railways and Canals,
Ottawa, Ont.

HUDSON BAY RAILWAY TERMINALS,
PORT NELSON, May 1, 1914.

W. A. BOWDEN, Esq.,
Chief Engineer,
Department of Railways and Canals,
Ottawa.

DEAR SIR,—I have the honour to present the following report upon the works of the Hudson Bay Railway terminus at Port Nelson during the fiscal year ending March 31, 1914.

During the early part of the year, my predecessor, Mr. H. T. Hazen, who had a small party at Port Nelson during the fall and winter of 1912-13, left for Ottawa to make arrangements for the ensuing season's work. There then remained at Port Nelson an engineering party and fifteen workmen, the latter being reduced on the opening of navigation to nine men.

The spring break-up came unusually early. The small creeks broke out of their solid frozen beds on April 15th, and flooded the harbour ice. The May following was relatively colder and the channel opposite Root creek did not break up until May 26, after which open water extended gradually upstream, large cakes breaking and going out with each tide. The shore ice, which remains grounded upon the beach for a width of one to two hundred feet, was sufficiently melted so that a gasoline launch was placed in the water during the third week of June.

SESSIONAL PAPER No. 20

The work accomplished previous to the arrival of the first ship on August 6 consisted in the placing of a half dozen barrel buoys in the channel entering the harbour; the construction, with round logs, of an engineer's office; the partial clearing of the area between King street and the river, and between Indian and Root creeks; and the construction of the temporary wharf for landing supplies which was under way at the time of the arrival of the first ship.

Halifax was chosen as the port from which all supplies for Port Nelson were to be shipped, and early in June large quantities were assembled for shipment at the Intercolonial wharves and sheds at Richmond. The ships which were chartered for the carrying of goods to Port Nelson were the sealers *Bonaventure* and *Bellaventure*, and the tramps *Alcazar*, *Alette*, *Cearense* and *Sindbad*. The department also shared with the Department of Naval Service the ss. *Beothic*, an ice-breaking sealer. For use at Port Nelson the department purchased the motor schooner *Neophyte* and the tug *Kathleen*, and sent these to Port Nelson in the tow of the *Bonaventure* and *Bellaventure*. These latter two ships, with their tows, left Sydney, where they coaled, on the 8th July and kept in close touch with one another until the 22nd, when the *Bonaventure*, making no further progress on account of ice, and her tow, handed over the *Neophyte* to the *Bellaventure* and proceeded unhampered towards Port Nelson, where she arrived on August 6, having had many further delays due to ice. The *Bellaventure* after a few days delay in the position left was able to avoid the ice adopting a circuitous northerly route and arrived safely at Port Nelson with the *Neophyte* and *Kathleen* on August 11. The *Alcazar* arrived at Port Nelson on August 18 and showed on her bow plates the effects of the ice which she encountered. The following table shows the time of passage of the various ships from Sydney or Halifax to Port Nelson:—

Ship.	Time of leaving Halifax or Sydney.	Arrived at Pt. Nelson.	Ice conditions.
<i>Bonaventure</i> , 1st trip.....	July 8	Aug. 6	Held by ice until Aug. 4.
<i>Bellaventure</i> , 1st trip.....	July 8	Aug. 11	Held by ice until Aug. 8.
<i>Alcazar</i>	Aug. 18	Held by ice in Hudson Bay.
<i>Sindbad</i>	Aug. 19	Sept. 5	Met ice only in Hudson Straits
<i>Beothic</i>	Aug. 30	Sept. 8	Met practically no ice.
<i>Cearense</i>	Aug. 31	Sept. 13	Met no ice.
<i>Alette</i>	Aug. 27	Sept. 14	Met no ice.
<i>Bellaventure</i> , 2nd trip.....	Sept. 7	Sept. 28	Towed Dredge to Pt. Nelson.
<i>Bonaventure</i> , 2nd trip.....	Sept. 17	Sept. 29	Met with no ice.

I understand no ice was met with by the *Alcazar*, which left Port Nelson on the 20th September, or by the *Beothic* which left on the 29th September, but the *Sindbad*, which left on the 30th September, met ice off Mansfield Island, and being of frail construction and short of coal, her captain deemed it wise to return to Port Nelson, and she arrived back on October 8. On the 13th she again left under convoy of the *Bellaventure* and *Bonaventure*, and made the passage safely through the small quantity of ice met with in the vicinity of Mansfield Island.

The *Alette* left Port Nelson on the 7th. She met with ice in the neighbourhood of Mansfield Island, and having punctured the plates of her fore peak, she returned to Port Nelson. She entered the harbour just after all floating craft had been placed in winter quarters, and without anchoring the ship or stopping her, the men on board beached her on the north side of the channel, four and a half miles from Root Creek. The naval service ss. *Acadia* was outside the harbour and came in just behind the *Alette*, anchored close by and took off the crew with boats and sailed on the 19th, making the passage through the Bay and Straits successfully.

Earlier in the season the ss. *Cearense*, after lying close by the naval service ship *Acadia* outside the harbour all one night, attempted to make the entrance early next morning, September 13, but from some undetermined cause she went out of her course and grounded on the south side of the channel, fourteen and a half miles from Root Creek. She was abandoned by her crew who were returned to Nova Scotia by the ss. *Boothie*.

During the period August 6 to October 13, which could be more properly reduced to the period August 11, the arrival of the *Neophyte*, to October 11, the date on which lightering ceased, all energies were directed towards landing cargo and preparing for the winter. Before this could be done workmen's tents and cookeries had to be put up, the wharf had to be completed, derricks erected, swamps drained, railway tracks laid, foundations excavated, warehouses built, rolling stock landed, supplies protected from fire, rain, frost, and theft, all of which operations were interdependent and each obstructed by the non-completion of the other. These and many other things unnecessary to recall prevented us from landing all the cargo which was desirable, and as a result a large quantity of dimensioned timber was returned to Halifax, and some was lost through the burning of the forward part of the ss. *Alette*, which broke out from some unknown causes, fourteen days after being beached. The fire raged fiercely for about a week, at the end of which the ice conditions enabled us to reach her from the shore and flood the ship by dynamiting her sides, thereby saving one-half the cargo.

The dredge *Port Nelson* was towed successfully from Toronto to Port Nelson and landed on the beach at Root creek. On the beach she sustained a slight injury, which we believe will not effect her usefulness in any way.

The *Neophyte*, *Kathleen*, gasoline boats, and other small craft were gotten out of the river by October 16, and none too soon, as the drifting ice became so thick in a few days that had they been afloat they would have been carried away.

On shore the buildings were erected as quickly as possible in order to house the workmen and protect supplies. The middle of September found us with one warehouse, a meat house, and one bunk house completed, and the end of October found three bunk houses, one dining camp, a retail store and office, two warehouses, a meat house and a root house completed. The hospital was completed on December 22, and at that time there was in use about two miles of narrow gauge track.

The Marconi station was begun as soon as the floating plant was placed in winter quarters and the supplies were all safe in warehouses, root houses, etc. On account of having to excavate all foundations in frozen clay, and lay concrete in November and December with the thermometer registering twenty below zero on many days, and erect the two hundred and fifty-foot steel masts in such a windy cold winter, it was not until February 20 that we were able to fully operate the station.

Work was begun in November on the stern wheel tug and the hull was finished about the last of February. The construction of a timber deck scow was begun on the 13th March under a large house tent and is progressing favourably.

During the latter part of February a gang of fifty men were moved over the Nelson river opposite Flamborough Head to procure native timber for temporary structures. As there are no horses here and as the dogs will be engaged in hauling provisions, the hauling of the logs has to be done with small bob sleighs hauled by the men themselves. Good progress is being made and over ten thousand pieces will be landed before the end of the season.

Very early in the winter it was realized that coal was short and in order to have sufficient for the coming spring's work with the dinky engine and the tug *Kathleen*, it was decided to burn wood, and thus a large amount of time and money was spent hauling wood for fuel from the sparsely wooded creeks and ridges near the camps.

In January the department began the construction of a tote road to Port Nelson for the purpose of bringing in the labour required during the summer of 1914. This

SESSIONAL PAPER No. 20

was not carried through to Port Nelson, but with the assistance of dog teams, hauled by the men themselves, the journey was made by the one hundred and fifty men with ease and without injury other than a few cases of temporary snow blindness. All these men arrived at Port Nelson a few days subsequent to the end of the fiscal year, and their presence will enable the work to progress much more rapidly than would otherwise have been possible during the coming summer.

Early in November a survey party was organized and sent up to Nelson river for the purpose of ascertaining its navigation possibilities for the first sixty miles. It was not possible, on account of ice conditions, to accomplish all that was desired, but much valuable information has been obtained.

Further sounding is being done in the harbour, but reliable work is not easily done on account of the great depth of the ice and the uncertain action of the water beneath the rough grounded ice. The Nelson river and harbour remained open until about the new year, when it became possible to cross on the ice below Seal islands. The channel gradually closed up and by the middle of January the ice was continuous across the channel opposite Root creek. The open water gradually receded until the end of March, when it was probably about eighteen miles distant from Root creek. From information derived from Mr. Hall, of the Hudson Bay Company, the ice in Hudson bay is continuous and solid for a distance of fifty miles off the Tatnam coast and is tremendously rough, with rafted points fifty feet above what would be water level. The character of the harbour ice varies greatly from year to year. November and December are the months when the ice conditions will be hard on the structures, as during all this period sheets of solid ice, two or three inches thick, move back and forth in continuous procession, with a maximum velocity of about one and three quarter knots. On the incoming tide the sheets meet the narrowing shores and set up a continuous cracking roar as the sheets raft, crack and crush to powder. When this year the harbour finally became solid from shore to shore, it consisted of a belt of rough, rafted, partly grounded ice, on edge, extending from the north beach half way to the deep channel, and from the south beach to about the edge of the deep channel. Between these lines, from Hart's creek to nine miles below Root creek, the ice in 1914, as well as 1913, was relatively smooth and has grown in thickness until it is about five feet thick. Beyond this smooth belt, toward the bay, the ice is almost impassibly rough and consists of great slabs four feet thick thrown up and rafted in all shapes and forms. In this kind of ice lies the *Cearense*. The ice towers above her decks on all sides and is heaved in upon her forward deck. On account of ice the tidal fluctuation during the month of March this year varied from two to four feet, whereas in summer it varies from a minimum of eight to a maximum of seventeen feet.

The health of the community at Port Nelson for the past year has been excellent, and the climate, though cold, is healthy.

The following table shows the average temperature for each month taken from morning and evening readings, 1913: January—42.0, February—24.6, March—15.1, April 22.5, May 29.3, June 43.9, July 53.0, August 51.7, September 37.6, October 21.2, November 8.3, December—5.7; 1914, January—23.9, February—28.5, March—7.7.

The wind blows a very large percentage of the time; the prevailing direction being from the northwest. The maximum velocity for one hour shows upon the gauge, which has been operating for the past four months, was forty miles per hour. The barometric fluctuations are not great, and as a weather indicator it is not as sensitive as in some other parts of Canada.

The land at Port Nelson and the adjacent country consists of swamps with scattered and stunted tamarack, and areas of clay at slightly higher elevation with a sparse growth of stunted spruce.

The whole ground surface is covered with a thick mat of moss, under which in the swamps is soft clay for a depth of four to six feet, overlying a great depth of hard

5 GEORGE V., A. 1915

pan. Beneath the moss, in the spruce covered areas, the ground if undisturbed, remains frozen throughout the summer. During the past season the prospecting of the country for construction materials has been carefully done, and materials of great value in the creation of harbour works have been located, though they do not lie as close to Port Nelson as would be desirable.

The number of men engaged upon the works has varied from time to time. During the winter there were about one hundred and eighty men on the pay-roll, which number includes all members of the staff. In addition to the above there were seven men attached to the Marconi wireless station, three white women, wives of employees, three men attached to the Royal Northwest Mounted Police, and an Indian community of about eleven men with their wives and children.

Mr. L. E. Silcox, of the Hudson Bay railway engineering staff, and a survey party were in the vicinity for a period of about three months and were supplied from Port Nelson as base.

A monthly transportation service by dog team between Le Pas and Port Nelson was operated throughout the winter in order that pay-roll and mail should not be long delayed. With the wireless station in successful operation since February 20, the necessity for a mail is not very much felt.

In concluding this report I wish to point out that the peculiar isolation of the work and the climate of the country has called upon the organization here to perform many functions and tasks not required in more accessible places, and it has caused much human effort to be lost or to be diverted from actual construction work.

Respectfully submitted,

D. W. McLACHLAN,
Engineer-in-charge.

DARTMOUTH BRANCH LINE,
DARTMOUTH, N.S., April 22, 1914.

W. A. BOWDEN, Esq.,
Chief Engineer, Dept. of Railways and Canals,
Ottawa, Ont.

DEAR SIR,—I have the honour to submit the following report on the progress of the construction of the Dartmouth to Deans branch of the Intercolonial Railway of Canada, during the fiscal year ended March 31, 1914.

The contract with Messrs. M. P. and J. T. Davis expired on March 31, 1914. The work comprised in the contract was not completed on that date, and an extension of time was granted to December 31, 1914. Considerable difficulty has been experienced by the contractors in securing labourers, and the method generally employed in regard to grading east of Cole Harbour, is to excavate the line cuttings by hand labour, and where the excavation quantities so obtained do not complete the embankments, to supply the balance from borrow pits by steam shovel and train. This makes the completion of the grading dependent upon the speed at which track can be laid, and steam shovels pushed forward from the Dartmouth end. Between Cole Harbour (mile 10), and Seaforth (mile 18), some comparatively large cuttings were not finished in advance, and were finally taken out by steam shovel, and this section was not sufficiently graded to permit track-laying until February, 1914, consequently delaying the completion of all unfinished embankments east of Seaforth.

Two steam shovels with light locomotive engines and cars were employed until October, 1913, and one steam shovel and equipment, during the winter.

On the work in advance of steam shovel operations, average forces of 42 foremen, 28 mechanics and 417 labourers were employed from April to October, 1913; 27 foremen, 23 mechanics and 229 labourers in November and December, 1913; and 19 foremen, 9 mechanics and 150 labourers from January to March, 1914.

From Dartmouth to Musquodoboit Harbour (mile 0 to mile 33) the grading is well advanced; there remains to be done some small gaps in embankment, and filling in and about openings left for such bridges and culverts as are not built, and the final trimming, ditching, etc. of cuttings. From Musquodoboit Harbour, to a point near Little river (mile 33 to mile 48) the cuttings are finished with the exception of final trimming, etc., as above, but considerable quantities of embankment are still unfinished, particularly between Musquodoboit Harbour and Crawford's Falls (mile 33 to mile 40). From Little river to the end of the line, there are unfinished line cuttings in which about 30,000 cubic yards remain to be excavated. This is insufficient to complete the embankments, and an additional quantity of borrow or train hauled material will be required.

Concrete work on bridge abutments and culverts which was closed down in November, 1912, was not resumed until July, 1913, so that a part of the most favourable season for this class of work was not taken advantage of, consequently the progress for the season was not equal to that anticipated.

Pile trestles have been erected at Cole Harbour, Lawrencetown, Porter's Lake and Chezeteook. As a protection against seaworms and to insure durability these trestles are built of creosoted piling with southern hard pine stringers and decking.

Wire fencing with cedar posts was erected from Dartmouth to west side Cole Harbour, and from east side Cole Harbour to Lawrencetown.

The greater part of the ties required, both for main line and switch ties have been provided and delivered on the right of way, and the balance are within hauling distance.

5 GEORGE V., A. 1915

Tracklaying was carried on from the Dartmouth end from time to time as the grading progressed, reaching the head of Chezzetcook (mile 26½) at the end of fiscal year.

In regard to ballasting, small deposits of gravel were found at Cole harbour and Porter's lake, and distributed under track in some of the wetter cuttings, but regular operations of ballasting were not commenced during the fiscal year. The country about the line was examined for suitable material, and deposits of gravel of sufficient quantity were located at Musquodoboit harbour (mile 33) and at Middle Musquodoboit (mile 54). That at Musquodoboit harbour is of fair quality, and the quantity required between that point and Dartmouth will probably be obtained there, as no deposit of sufficient size has been found nearer Dartmouth. Test pits at Middle Musquodoboit indicate a large quantity of good ballast, which will furnish the supply for the Musquodoboit Valley section.

The total expenditure to end of fiscal year is \$1,236,519.16, equal to 64½ per cent of the estimated total expenditure, and the percentages of the various items, compared with the estimate to complete are:

Location.	100 per cent.
Engineering expenses.	79 "
Right of way and legal expenses.	26 "
Grading.	93 "
Bridges, trestles and culverts.	40 "
Ties.	95 "
Rails and fastenings.	36 "
Ballast.	02½ "
Tracklaying.	33 "
Fencing right of way.	20 "

"Engineering," "Grading," and "Rails and Fastenings" will probably at the completion of the work somewhat exceed the amounts estimated by reason of the additional length of time required to finish the work, the appearance of more loose and solid rock than was expected in cuttings in upper part of Musquodoboit valley, and the substitution of 80 pound for 60 pound rails on part of the line and the increase in prices of same from \$27 to \$28 per ton.

The items of work remaining to be done, likely to occupy the most time are train filling and ballasting, for which some additional plant has been provided and more expected, promising a fairly vigorous prosecution of the work.

I am, sir, your obedient servant,

W. A. HENDRY,
Engineer-in-charge.

PART VII.

CANALS

Diagrams showing dimensions of smallest lock on each canal, etc.

Dimensions and other features of the several canal works, and description of the intermediate water navigations:

1. Between Montreal and Port Arthur or Fort William, Lake Superior.
2. Montreal, Ottawa and Kingston.
3. River Richelieu and Chambly Canal to Lake Champlain.
4. Trent Canal.
5. St. Peter's Canal.

CANALS.

The following statements give in concise form the essential features of the government canal works and the intermediate water navigation.

The canal systems of the Dominion, under government control, in connection with lakes and navigable rivers are as follows:—

First.—The through route between Montreal and Port Arthur or Fort William on the west shore of Lake Superior (14 feet minimum depth of water.)

	Statute Miles.
1. Lachine canal.	8½
Lake St. Louis and River St. Lawrence.	16
2. Soulanges canal.	14
Lake St. Francis and River St. Lawrence.	31
3. Cornwall canal.	11¼
River St. Lawrence.	5
4. Farrans Point canal.	1¼
River St. Lawrence.	9½
5. Rapide Plat canal.	3¾
River St. Lawrence.	4½
6. Galops canal.	7¼
River St. Lawrence and Lake Ontario.	228
7. Welland canal.	26¾
Lake Erie, Detroit river, Lake St. Clair, Lake Huron, etc.	574
8. Sault Ste. Marie canal.	1¼
Lake Superior to Port Arthur or to Fort William.	272
Total.	1,214
To Duluth.	1,336
Chicago.	1,240

Second.—Montreal to International Boundary, near Lake Champlain.

	Statute Miles.
1. St. Lawrence river to Sorel.	46
2. Sorel, via Richelieu river, to St. Ours lock.	14
3. St. Ours lock.	½
4. Richelieu river, St. Ours lock, to Chambly canal.	32
5. Chambly canal.	12
6. Chambly canal to boundary line.	23
Total.	127½

Third.—Montreal to Ottawa.

	Statute Miles.
1. Lachine canal.	8½
Lake St. Louis.	15
2. St. Anne's lock at outlet of Ottawa river.	½
Lake of Two Mountains and Ottawa river.	27
3. Carillon canal.	¾
Ottawa river.	6¼
4. Grenville canal.	5¾
Ottawa river to Ottawa.	56
Total.	119¾

Fourth.—Ottawa to Kingston and Perth.

	Statute Miles.
1. Rideau canal, Ottawa to Kingston	126½
Perth Branch.—Rideau lake to Perth	7
	133½
Total	133½

Fifth.—Lake Ontario, at Trenton, to Lake Huron.

1. Trent canal,—not completed.

Sixth.—Atlantic Ocean to Bras d'Or Lakes, Cape Breton.

	Statute Miles.
1. St. Peter's canal	½

RIVER ST. LAWRENCE AND LAKES.

The River St. Lawrence, with the system of canals established on its course above Montreal, and the Lakes Ontario, Erie, St. Clair, Huron and Superior, with connecting canals, afford a course of water communication extending from the Strait of Belle Isle to Port Arthur or Fort William on the west coast of Lake Superior, a distance of 2,217 statute miles. The distance to Duluth is 2,339 miles; the distance to Chicago, 2,243 miles. From the Strait of Belle Isle, at the mouth of the St. Lawrence, to Montreal, the distance is 1,003 statute miles. From Quebec to Montreal the distance is 160 miles.

The control of the St. Lawrence ship channel, and the making of improvements thereto, are now under the Department of Marine and Fisheries, whose annual reports give full information as to the history and improvement of the channel. A 30-foot channel between Montreal and Father Point—with a width of 450 feet in the straight portions, and of from 600 to 750 feet in the bends between Montreal and Quebec, and of 1,000 feet everywhere below Quebec—has been practically completed. In 1909 the first work of deepening the ship channel to 35 feet was begun.

By means of channel improvements, Montreal has been placed at the head of ocean navigation, and here the canal systems of the River St. Lawrence begin, overcoming the several rapids by which the river channel upwards is obstructed, and giving access through the St. Lawrence canals, the Welland canal, the Great Lakes and the Sault Ste. Marie canal to the head of Lake Superior.

The difference in level between the point on the St. Lawrence, near Three Rivers, where tidal influence ceases, and Lake Superior, is about 600 feet.

The Dominion canals, constructed between Montreal and Lake Superior, are the Lachine, Soulanges, Cornwall, Farrans Point, Rapide Plat, Galops, Murray, Welland and Sault Ste. Marie. Their aggregate length is 74 miles; total lockage (or height directly overcome by locks), 553½ feet. The number of locks through which a vessel would pass in its passage from Montreal, at the head of ocean navigation, to the head of Lake Superior, is 48. The Soulanges canal takes the place of the Beauharnois canal, abandoned for navigation purposes, and the Murray canal is used only by the coasting vessels on Lake Ontario. It is not a part of the through route.

It is important to note that the enlargement of canals on the main route between Montreal and Lake Erie comprises locks of the following minimum dimensions: length, 270 feet; width, 45 feet; depth of water on sills, 14 feet. The length of vessels to be accommodated is limited to 255 feet. At Farrans Point, in the canal of that name, the lock is 800 feet long. A similar lock is built at Iroquois, on the Galops canal, the object being to pass a full tow at one lockage. The lock at Sault Ste. Marie is 900 feet by 60 feet, with 18 feet 3 inches on the sills at lowest known water level.

SESSIONAL PAPER No. 20

Access from Lake Erie to Lake Huron is obtained by way of the Detroit river, Lake St. Clair, and the St. Clair river, which have been deepened to a minimum of 21 feet, principally by the United States government.

Communication between Lakes Huron and Superior is obtained by means of the Canadian Sault Ste. Marie canal, and also by the St. Mary's Falls canals, situated on the United States side of the River St. Mary. Improvements of the United States channels in River St. Mary through Hay lake, east of Sault Ste. Marie, have been carried on for several years past. The dredged areas now total 34 miles in length, with a minimum width of 300 feet, which is increased at angles and other critical points to 1,000 feet. The depth is 20 feet at the mean stage of water. In the year 1903 excavation was commenced to afford 21 feet at the lowest stage of water.

The improvement of Canadian channels from above Montreal to the head of Lake Superior is controlled by the Department of Public Works. Work is now under way to dredge the channel in the River St. Mary to 21.5 feet below L.W.L., the existing minimum depth being 18.75 feet below L.W.L. Existing depths elsewhere between Lakes Erie and Superior give a minimum of 21 feet below L.W.L. The Limekiln channel in the Detroit river has been deepened to 21 feet; and the United States government has opened the Livingstone channel in the same (Detroit river) with a depth of 22 feet.

The improvements at the harbours of Fort William and Port Arthur now under way will give a minimum depth of 25 feet below L.W.L. This depth exists at present over the channels leading to the principal wharves.

The provisions and maintenance of aids to navigation on all Canadian river and lake channels is controlled by the Department of Marine and Fisheries.

The Sault Ste. Marie, Welland, Cornwall, Soulanges and Lachine canals are well lighted throughout by electricity, and are electrically operated. The Farrans Point canal is lighted with acetylene gas.

Navigation, which is closed by ice during the winter months, opens about the end of April on the Great Lakes and St. Lawrence route. Ice-breaking steamers are now employed to lengthen the navigable season at Lake Superior and Georgian Bay terminals.

STATEMENT OF PRESENT MINIMUM DEPTH OF IMPROVED CHANNELS.

Father Point to Montreal.	30 feet.
Montreal to Port Colborne.	14 "
Port Colborne to Fort William.	18½ "

LACHINE CANAL.

Length of canal.	8½ statute miles.
Number of locks.	5
Dimensions of locks.	270 feet by 45 feet.
Total rise or lockage	45 feet.
Depth of water on sills, at two locks.	18 "
Depth of water on sills, at three locks.	14 "
Average width of new canal.	150 "

The old lift locks, 200 feet by 45 feet, are still available, with 9 feet of water on mitre sills. The two lower north locks, however, have been lengthened to 270 feet, and have 16½ feet of water on the sills.

The canal consists of one channel, with two distinct systems of locks, the old and the enlarged. There are two lock entrances at each end.

The canal extends from the city of Montreal to the town of Lachine, overcoming the St. Louis rapids, the first of the series of rapids which bar the ascent of the River St. Lawrence. They are 986 miles distant from the Strait of Belle Isle.

SOULANGES CANAL.

Length of canal.	14 statute miles.
Number of locks—	
Lift.	4
Guard.	1
Dimensions of locks.	280 feet by 45 feet.
Total rise or lockage.	84 feet.
Depth of water on sills.	15 “
Breadth of canal at bottom.	100 “
Breadth of canal at water surface.	164 “

The canal extends from Cascade Point to Coteau Landing, overcoming the Cascades rapids, Cedar rapids and Coteau rapids.

From the head of the Lachine to the foot of the Soulanges canal the distance is sixteen miles.

CORNWALL CANAL.

Length of canal.	11 statute miles.
Number of locks.	6
Guard gates.	1
Dimensions of locks.	270 feet by 45 feet.
Total rise or lockage.	48 feet.
Depth of water on sills.	14 “
Breadth of canal at bottom.	90 “
Breadth of canal at water surface.	154 “

The old lift locks, 200 feet by 55 feet, are also available with nine feet of water on mitre sills.

From the head of the Soulanges to the foot of the Cornwall canal there is a stretch through Lake St. Francis 31 miles, which is navigable for vessels drawing fourteen feet.

The Cornwall canal extends past the Long Sault rapids from the town of Cornwall to Dickinson's Landing.

WILLIAMSBURG CANALS.

The Farrans Point, Rapide Plat and Galops canals are collectively known as the Williamsburg canals.

FARRANS POINT CANAL.

Length of canal.	1½ mile.
Number of locks.	1
New lock.	800 feet by 50 feet.
Old lock.	200 “ 45 “
Total rise or lockage.	3½ feet.
Depth of water on sills of new lock.	14 “
Depth of water on sills of old lock.	9 “
Breadth of canal at bottom.	90 “
Breadth of canal at water surface.	154 “

SESSIONAL PAPER No. 20

From the head of the Cornwall canal to the foot of Farrans Point canal the distance on the River St. Lawrence is five miles. The latter canal enables vessels ascending the river to avoid Farrans Point rapids, passing the full tow at one lockage. Descending vessels run the rapids with ease and safety.

RAPIDE PLAT CANAL.

Length of canal.	3 $\frac{3}{4}$ miles.
Number of locks.	2
Dimensions of locks.	270 feet by 45 feet.
Total rise or lockage.	11 $\frac{1}{2}$ feet.
Depth of water on sills.	14 "
Breadth of canal at bottom.	80 "
Breadth of canal at water surface.	152 "

The old lift-lock, 200 feet by 45, is also available with nine feet of water on mitre sills.

From the head of Farrans Point canal to the foot of Rapide Plat canal there is a navigable stretch of 9 $\frac{1}{2}$ miles. The canal was formed to enable vessels ascending the river to pass the rapids at that place. Descending vessels run the rapids safely.

GALOPS CANAL.

Length of canal.	7 $\frac{1}{2}$ miles.
Number of locks.	3
Dimensions of locks—	
Lift-lock at foot of canal.	800 by 50 feet.
Guard-lock at head of canal.	270 by 45 "
Lift-lock to pass vessels around Galops rapids only.	303 by 45 "
Total rise or lockage.	15 $\frac{1}{2}$ feet.
Depth of water on sills.	14 "
Breadth of canal at bottom.	80 "
Breadth of canal at surface of water.	144 "

From the head of Rapide Plat canal to Iroquois, at the foot of the Galops canal the St. Lawrence is navigable 4 $\frac{1}{2}$ miles. The canal enables vessels to overcome the rapids at Pointe aux Iroquois, Point Cardinal and the Galops.

MURRAY CANAL.

Length between eastern and western piers.	5 $\frac{1}{2}$ miles.
Breadth at bottom.	80 feet.
Breadth at water surface, low water, Lake Ontario.	124 "
Depth below low water, Lake Ontario.	11 "
Number of locks.	None.

This canal extends through the Isthmus of Murray, giving connection westward between the head waters of the Bay of Quinté and Lake Ontario, and thus enabling vessels to avoid the open lake navigation.

WELLAND CANAL.

Main line from Port Dalhousie, Lake Ontario, to Port Colborne, Lake Erie.

	Old line.	Enlarged or new line.					
Length of canal	27½ miles.	26¾ miles.					
Pairs of guard-gates (formerly 3)	2	1					
Number of locks—

WELLAND RIVER BRANCHES.

Length of canal—

Port Robinson Cut to River Welland	2,622 feet.
From the canal at Welland to the river, via lock at Aqueduct	300 "
Chippewa Cut, to River Niagara (6-ft. navigation only)	1,020 "
Number of locks—one at Aqueduct and one at Port Robinson	2
Dimensions of locks	150 x 26½ feet.
Total lockage from the canal at Welland down to River Welland	10 feet.
Depth of water on sills	9 feet 10 inches.

GRAND RIVER FEEDER.

Length of canal	21 miles.
Number of locks	2
Dimensions of locks	1 of 150 by 26½ ft.
	1 of 300 by { 45 ft. lower. 28 ft. upper.
Total rise or lockage	10 feet.
Depth of water on sills	6 " only.
Navigable depth of channel	9 "

PORT MAITLAND BRANCH.

Length of canal	1¾ miles.
Number of locks	1
Dimensions of locks	185 feet by 45 feet.
Depth of water on sills	7½ feet.
Total rise or lockage	7 "
Navigable depth of channel	6 " only.

The Welland canal has two entrances from Lake Ontario at Port Dalhousie, one for the old, the other for the new canal.

SESSIONAL PAPER No. 20

From Port Dalhousie to Allanburg, $11\frac{3}{4}$ miles, there are two distinct lines of canal in operation, the old line and the enlarged or new line.

From Allanburg to Port Colborne, a distance of 15 miles, there is only one channel, the old canal having been enlarged.

From the head of the Welland canal there is a deep water navigation through lake Erie, the Detroit river, lake St. Clair, the St. Clair river, lake Huron and river St. Mary to the Sault canal, a distance of about 580 miles. From the Sault the distance through lake Superior to Port Arthur is 274 miles, and to Duluth 397 miles.

SAULT STE. MARIE CANAL.

Length of canal, between the extreme ends of the entrance piers.	$11\frac{1}{2}$ miles or 7,472 feet.
Number of locks.	1
Dimension of locks.	900 feet by 60 feet at water level; width at lock bottom, 59 feet.
Depth of water on sills (at lowest known water level).	18 feet 3 inches.
Total rise or lockage (mean).	19 feet.
Breadth of canal at bottom.	141 feet 8 inches.
Breadth at surface of water.	150 feet.

This canal has been constructed through St. Mary's island, on the north side of the rapids of the river St. Mary, and, with that river, gives communication on Canadian territory between lakes Huron and Superior.

MONTREAL, OTTAWA AND KINGSTON.

This route extends from the harbour of Montreal to the port of Kingston, passing through the Lachine canal, the navigation section of the lower river Ottawa, and the Ottawa canals, to the city of Ottawa; thence by the river Rideau and the Rideau canal to Kingston, on lake Ontario—a total distance of $245\frac{3}{4}$ miles.

After leaving the Lachine canal the works constructed to overcome difficulties of navigation are:—

OTTAWA RIVER CANALS.

The Ste. Anne's lock. Carillon canal. Grenville canal.

RIDEAU CANAL.

The total lockage (not including that of the Lachine canal) is 509 feet (345 rise, 164 fall) and the number of locks is 55.

5 GEORGE V., A. 1915

The following table exhibits the intermediate distances from Montreal harbour:—

Sections of Navigation.	Inter- mediate Distance.	Total Distance from Montreal.
	Miles.	Miles.
The Lachine canal.	8½	
From Lachine to Ste. Anne's lock	15	23½
Ste. Anne's lock and piers.	⅛	23⅝
Ste. Anne's lock to Carillon canal.	27	50
The Carillon canal.	⅜	51
From Carillon to Grenville canal.	6½	57
The Grenville canal.	5¼	62
From the Grenville canal to entrance of Rideau navigation.	56	119
Rideau navigation ending at Kingston.	126¼	245½
" Perth branch, from Rideau lake to Perth.	7	195

STE. ANNE'S LOCK.

	New Lock.	Old Lock.
Length of canal.	⅓ mile.	⅓ mile.
Number of locks.	1	1
Dimensions of locks.	200 x 45 feet.	190 x 45 feet.
Total rise or lockage	3 "	3 "
Depth on sills.	9 "	6 "

This work, with guide piers above and below, surmounts the Ste. Anne's rapids between Ile Perrot and the head of the island of Montreal, at the outlet of that portion of the river Ottawa which forms the lake of Two Mountains, 23½ miles from Montreal harbour.

THE CARILLON CANAL.

Length of canal.	¾ mile.
Number of locks.	2
Dimensions of locks.	200 x 45 feet
Total rise or lockage.	16 feet.
Depth of water on sills.	9 "
Breadth of canal at bottom.	100 "
Breadth of canal at water surface.	110 "

This canal overcomes the Carillon rapids.

From Ste. Anne's lock to the foot of the Carillon canal is a navigable stretch of 27 miles, through the lake of Two Mountains and river Ottawa.

By the construction of the Carillon dam across the river Ottawa the water at that point is raised 9 feet, enabling the river above to be used for navigation.

GRENVILLE CANAL.

Length of canal.	5¾ miles
Number of locks.	5
Dimensions of locks.	200 x 45 feet.
Total rise or lockage.	43¾ feet.
Depth of water on sills.	9 "
Breadth of canal at bottom.	40 to 50 feet.
Breadth of canal at surface of water.	50 to 80 "

This canal, by which the Long Sault rapids are avoided, is about 56 miles below the city of Ottawa, up to which point the River Ottawa affords unimpeded navigation.

Johns, and up the River Richelieu to Lake Champlain. The distance from Sorel to the boundary line is 81 miles.

At Whitehall, at the southern end of Lake Champlain, connection is obtained by means of the Champlain canal with the River Hudson, by which the city of New York is directly reached.

The following table shows the distances between Sorel and New York:—

Sections of Navigation.	Interme- diate Distance.	Total Distances.
	Miles.	Miles.
Sorel to St. Ours Lock	14	14
St. Ours Lock to Chambly Canal	32	46
Chambly Canal	12	58
Chambly Canal to boundary line	23	81
Boundary line to Champlain Canal	111	192
Champlain Canal to junction with Erie Canal	66	258
Erie Canal from junction to Albany	7	265
Albany to New York	146	411

ST. OURS LOCK AND DAM.

Length	$\frac{1}{3}$ mile.
Number of locks	1
Dimensions of lock	200 feet by 45 feet.
Total rise or lockage	5 feet.
Depth of water on sills	7 "
Length of dam in western channel	690 "

At St. Ours, 14 miles from Sorel, the River Richelieu is divided by a small island into two channels. The St. Ours lock is in the eastern channel.

There is a navigable depth in the Richelieu of 7 feet between St. Ours lock and Chambly basin, a distance of 32 miles.

CHAMBLY CANAL.

Length of canal	12 miles.	
Number of locks	9	
Dimensions of locks—		
Guard lock No. 1 at St. Johns	122 feet	} From 22½ to 24 feet wide.
Lift lock No. 2	124 "	
Lift locks Nos. 3, 4, 5, 6	118 "	
Lift locks Nos. 7, 8, 9, combined	125 "	
Total rise or lockage	74 "	
Depth of water on sills	6½ "	
Breadth of canal at bottom	36 "	
Breadth of canal at surface of water	60 "	

This canal succeeds the 32 miles of navigable water between St. Ours lock and Chambly basin. The canal overcomes the rapids between Chambly and St. Johns.

TRENT CANAL.

The term "Trent canal" is applied to a series of water stretches, which do not, however, form a connected system of navigation, and which, in the present condition, are efficient only for local use. By various works this local use has been extended, and by others, now in progress and contemplation, this will become a through route between Lake Ontario and Lake Huron.

The series is composed of a chain of lakes and rivers, extending from Trenton, at the mouth of the River Trent, on the Bay of Quinté, Lake Ontario, to Lake Huron.

Many years ago the utilizing of these waters for the purpose of through water communication between Lake Huron and Lake Ontario was projected.

The course, as originally contemplated and modified, is as follows:—

Through the River Trent, Rice Lake, the River Otonabee and Lakes Clear, Stony, Lovesick, Deer, Buckhorn, Chemong, Pigeon, Sturgeon and Cameron to Lake Balsam, the summit water, about 155 miles from Trenton; from Lake Balsam by a canal and the River Talbot to Lake Simcoe. The route from Lake Simcoe to Georgian bay, Lake Huron, has not yet been determined.

The full execution of the scheme, commenced by the Imperial Government in 1837, was deferred. By certain works, however, below specified, sections of these waters have been made practicable for navigation, and the whole scheme is now being carried out. A branch of the main route, extending from Sturgeon lake south, affords communication with the town of Lindsay, and, through Lake Scugog, to Port Perry, a distance of approximately 174 miles from Trenton.

The works by which the Trent navigation has been improved to date comprise short canals with locks at Hastings, Peterborough, Peterborough to Lakefield 7 locks, one being a hydraulic lift; Young's Point, Burleigh Falls, Lovesick, Buckhorn, Bobcaygeon, Fenelon Falls, Rosedale, and six locks between Balsam and Simcoe lakes, one being a hydraulic lift; also lock and dam at Lindsay.

Also dams at Healey Falls, Hastings, Peterborough, Peterborough to Lakefield, 6; Young's Point, Burleigh, Lovesick, Buckhorn, Bobcaygeon, Fenelon Falls, Rosedale, and three between Balsam and Simcoe lakes.

Bridges also have been built at many of the locks and at other places.

For convenience the canal may be divided into the following divisions, the lengths being given:—

ONTARIO-RICE LAKE DIVISION.

Embracing the canal and river navigation between Trenton, on the Bay of Quinté, to Rice lake, 56 miles.

The all-river route from Trenton, on the Bay of Quinté, to Rice lake was fully decided upon by the government during the session of 1907, and the work of construction was begun that fall. The improvement is carried out on the principle of damming the river at suitable points by means of dams, and connecting the pools thus created by means of locks and short stretches of canal. The locks on this division will be 175 feet long, 33 feet wide, with 8 feet 4 inches of water on the sills. In the reaches there will be a minimum depth of 9 feet of water. For the purpose of construction, this division of 56 miles has been divided into seven sections, all of which are under contract. Rice lake is 369 feet above low water level of Lake Ontario, which height will be overcome by 18 locks.

PETERBOROUGH-RICE LAKE DIVISION.

Embracing that stretch of river and lake navigation from the lower end of Rice lake to Peterborough, 32 miles.

This division is navigable with a minimum depth of 6 feet.

At Hastings are a concrete lock, replacing the old masonry lock, and a concrete dam, replacing the old timber structure which formerly existed at that point; these maintain navigation on the Trent River, Rice Lake and the Otonabee River to Peterborough, a distance of about 38 miles.

At Peterborough, 89 miles from Trenton, is a masonry lock and a concrete dam which maintain navigation through Little lake to lock No. 6 of the Peterborough-Lakefield division, a distance of about three-quarters of a mile.

PETERBOROUGH-LAKEFIELD DIVISION.

Embracing that stretch of river and canal navigation from Little lake at Peterborough to Lakefield, 10 miles.

Construction completed and canal in operation with a minimum depth of 6 feet for navigation.

From Peterborough to Lakefield, navigation is maintained on the Otonabee river by a series of concrete locks and timber dams as follows:—

Leaving Little lake through lock No. 6, in a distance of about half a mile, the hydraulic lift lock is reached, where there is a lift of 65 feet into a reach which extends to lock No. 5, about five miles from Peterborough, the last mile only of this reach being in the river; from here to Lakefield, locks 5, 4, 3, 2 and 1, with their respective dams, give navigation to Lakefield, about ten miles from Peterborough, or 99 from Trenton, and thence on five miles further to Young's Point.

KAWARTHA LAKES DIVISION.

Embraces that stretch of lake and river navigation from Lakefield to the entrance to the canal on the west shore of Balsam lake—62 miles.

Navigable with a minimum depth of 6 feet. Also in this division, may be included the Lindsay branch which embraces the Scugog lake and river from main channel on Sturgeon lake to Port Perry, the distance being about 30 miles, not included in the total 62 miles, above mentioned. A new lock and dam at Lindsay on this branch have recently been built.

At Young's Point, a masonry lock and timber dam maintain navigation through Clear and Stony lakes to Burleigh, a distance of about nine miles.

At Burleigh, a masonry lock of two lifts and concrete dam maintain navigation through Lovesick lake, about two miles, to Lovesick. A new concrete dam has recently been completed at Burleigh.

At Lovesick, a masonry lock and timber dam maintain navigation through Deer bay for about five miles to Buckhorn.

At Buckhorn, a masonry lock and new concrete dam maintain navigation for about 16½ miles through Buckhorn and Pigeon lakes to Bobcaygeon, 136 miles from Trenton, and also as branches, maintain navigation from Buckhorn lake through Chemong lake to Bridgenorth, about 8 miles, and in the Pigeon river from Pigeon lake to Omeme, about 10 miles.

At Bobcaygeon, a masonry lock and two dams, one being recently rebuilt of concrete and the other a timber one, maintain navigation through Sturgeon lake and Fenelon river, a distance of about 14½ miles to Fenelon Falls.

At Fenelon Falls is a short canal, a masonry lock of two lifts and a new concrete dam which maintain navigation across Cameron lakes to Rosedale, a distance of about 3½ miles, to a new concrete lock of the same dimensions as those of the Ontario-Rice lake division.

At Rosedale, the new concrete lock and dam maintain navigation on Balsam lake, the summit level of the canal, which extends from Rosedale to the hydraulic

SESSIONAL PAPER No. 20

lock at Kirkfield, a distance of twelve miles; half of this distance is through a canal connecting Balsam lake with the lock, which is about 166 miles from Trenton.

SIMCOE-BALSAM LAKE DIVISION.

Extends from Balsam lake to Gamebridge on Lake Simcoe—18.2 miles.

Construction completed and canal in operation with a minimum depth of 6 feet.

At the Kirkfield hydraulic lock is a drop of 50.44 feet from the summit level. From this point to Gamebridge on Lake Simcoe, 179 miles from Trenton, the route consists of canal and river reaches maintained by damming the Talbot river. There are five new concrete locks numbered 1, 2, 3, 4 and 5, with concrete dams at Nos. 1 and 3.

HOLLAND RIVER DIVISION.

This contemplated the canalization of the Holland river between Lake Simcoe and Newmarket, 12.3 miles. It has not been completed, and work on it was discontinued in December, 1911.

The following is a list of locks now in use, with their dimensions, in order of location, from Hastings to Gamebridge on Lake Simcoe.

	Length between Hollow Quoins	Width.	Depth on Sill.	Lift.
	Ft.	Ft.	Ft.	Ft.

ST. PETER'S CANAL, CAPE BRETON.

Length of canal	About 2,600 feet.
Breadth at water line	55 feet.
Lock	1 tidal lock, 4 pairs of gates.
Dimensions	200 feet by 48 feet.
Depth of water on sills	18 feet at lowest water.
Depth through canal	19 feet.
Extreme rise and fall of tide in St. Peter's bay	7 feet.

This canal connects St. Peter's bay on the southern side of Cape Breton, Nova Scotia, with the Bras d'Or lakes. It crosses an isthmus half a mile in width, and gives access from the Atlantic. A new Atlantic entrance and lock, 300 feet by 48 feet, are now under construction. These will replace the existing lock and entrance.

PART VIII.

MISCELLANEOUS STATEMENTS

Table of distances, Intercolonial and Prince Edward Island Railways.

INTERCOLONIAL RAILWAY.

- Expenses, gross earnings, freight tonnage, profit or loss, and passengers, yearly since July 1, 1876.
- Earnings, passenger, freight, mails and sundries, yearly since July 1, 1876.
- Earnings, yearly since July 1, 1876.
- Local and through freight, yearly since July 1, 1876.
- Local and through passengers, yearly since July 1, 1876.
- Coal carried from Nova Scotia collieries, yearly since July 1, 1876.
- Grain carried for shipment, yearly since July 1, 1876.
- Flour and meal carried, yearly since July 1, 1876.
- Grain carried, yearly since July 1, 1876.
- Lumber carried, yearly since July 1, 1876.
- Live stock carried, yearly since July 1, 1876.
- Raw and refined sugar carried, yearly since July 1, 1876.
- Fresh and salt fish carried, yearly since July 1, 1876.
- Ocean-borne goods carried, yearly since July 1, 1876.

WINDSOR BRANCH.

- Earnings, expenses and profits or losses, yearly from 1880.

PRINCE EDWARD ISLAND RAILWAY.

- Expenses, earnings, freight and passenger traffic and loss, yearly from 1875.

CANALS.

- Statement showing total cost of construction and enlargement from Montreal to Port Arthur.
- Statement showing total cost of construction and enlargement from Lachine to Ottawa.
- Statement showing total cost of construction and enlargement from Ottawa to Kingston.
- Statement showing total cost of construction and enlargement from St. Johns to Sorel.
- Statement showing total cost of construction and enlargement from Lake Ontario to Georgian Bay.
- Statement showing total cost of construction and enlargement from Atlantic Ocean to Bras d'Or Lakes.
- Freight traffic in 1912 and 1913.
- Dates of opening and closing of canals for the season of 1913.

INTERCOLONIAL RAILWAY.

The Intercolonial railway touches six Atlantic ocean ports, namely Pointe du Chêne, Pictou, Halifax, St. John, Sydney and North Sydney, as well as the River St. Lawrence ports of Lévis, opposite Quebec, and Montreal.

The total length of the road operated during the year ended March 31, 1914, was 1,457.77 miles.

The following are the through distances:—

	Miles.
Montreal to Halifax, via Lévis	836.34
“ St. John, via Lévis	740
“ Sydney, via Lévis	988.74
“ North Sydney, via Lévis	980.47

Freight is carried direct via St. Henri, which would reduce each of the above distances by 3 miles.

MAIN LINE AND BRANCHES.

	Miles.
Halifax to Truro	61.87
Dartmouth Branch	12.00
Truro to Moncton	123.77
Moncton to St. John	89.31
Pointe du Chêne Branch	11.98
Moncton to Campbellton	185.37
Campbellton to Ste. Flavie	105.03
Ste. Flavie to Rivière du Loup	83.29
Rivière Ouelle Branch	6.19
Rivière du Loup to Pointe Lévis	115.55

WINDSOR BRANCH.

This road is operated by the Dominion Atlantic Railway Company (formerly the Windsor and Annapolis Railway Company), under a lease which covers also running powers over the Intercolonial railway between Windsor Junction and Halifax. The company retains two-thirds of the gross earnings, and the Government receives one-third of the gross earnings, for maintaining the way and works.

Year.	Miles in operation.	One-third gross earnings.	Proportion credited to line Windsor Junction to Halifax.		Proportion credited to the Windsor Branch.		Maintenance expenses.	Profit.	Loss.

PART IX
ACTS AUTHORIZING RAILWAY SUBSIDIES
IN FORCE MARCH 31, 1914

9-10 EDWARD VII.

CHAP. 51.

An Act to authorize the granting of subsidies in aid of the construction of the lines of railway therein mentioned.

[Assented to 4th May, 1910.]

HIS Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. The Governor in Council may grant a subsidy of \$3,200 per mile towards the construction of each of the undermentioned lines of railway (not exceeding in any case the number of miles hereinafter respectively stated) which shall not cost more on the average than \$15,000 per mile for the mileage subsidized, and towards the construction of each of the said lines of railway, not exceeding the mileage hereinafter stated, which shall cost more on the average than \$15,000 per mile for the mileage subsidized, a further subsidy beyond the sum of \$3,200 per mile of fifty per cent on so much of the average cost of the mileage subsidized as is in excess of \$15,000 per mile, such subsidy not exceeding in the whole the sum of \$6,400 per mile—

1. For a line of railway from Tusket Wedge to a point on the Halifax and South Western Railway at or near Riverdale station, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 27; not exceeding 8 miles.

2. To the Halifax and South Western Railway Company, for a line of railway from Lunenburg to Bridgewater via Upper La Have, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 28; not exceeding 12 miles.

3. To the Inverness Railway and Coal Company, for a line of railway from Cheticamp to a point on the line already built between Broad Cove and Point Tupper, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 17; not exceeding 37 miles.

4. To the Margaree Coal and Railway Company, for a line of railway from a point at or near Orangedale, on the Intercolonial Railway, thence by the east side of Lake Ainslie and Ste. Rosa, to Chimney Corner Cove, not exceeding 46 miles; and for a line of railway from a point on the Intercolonial Railway between Orangedale and Point Tupper to Caribou Cove on Inhabitants Bay or River, not exceeding 4 miles; in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 18; not exceeding in all 50 miles.

5. For a line of railway from a point on the Dominion Atlantic Railway to the Government pier or wharf at Canning, in lieu of the subsidy granted by chapter 40 of 1907, section 1, item 7; not exceeding 1 mile.

6. For a line of railway from Brazil Lake on the Dominion Atlantic Railway to Kemptville, Nova Scotia, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 16; not exceeding 11 miles.

7. To the Dominion Atlantic Railway Company, for a line of railway from Centreville on the Dominion Atlantic Railway, westerly to Weston, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 30; not exceeding 15 miles.

8. For a line of railway from a point on the Intercolonial Railway at or near Dartmouth, in the county of Halifax, to a point at or near Deans Settlement, in the county of Halifax, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 21; not exceeding 80 miles.

9. For a line of railway from a point at or near Deans settlement, in the county of Halifax, to a point at or near Melrose, in the county of Guysborough, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 22; not exceeding 52 miles.

10. For a line of railway from a point at or near New Glasgow, in the county of Pictou, to a point at or near Melrose, in the county of Guysborough, and from the said point at or near Melrose to Guysborough, in the county of Guysborough, with a branch line to Country Harbour, in the county of Guysborough, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 23; not exceeding in all 116 miles.

11. To the International Railway Company of New Brunswick, for $3\frac{1}{2}$ miles of its railway, being the distance which the subsidy granted by chapter 63 of 1908, section 1, item 15, is short of covering.

12. For a line of railway from Grand Falls to St. John, New Brunswick, in lieu of the subsidies granted by chapter 40 of 1907, section 1, items 2, 3 and 10, respectively, and in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 69; not exceeding 228 miles.

13. For a line of railway from Connors, at the terminus of the Temiscouata Railway, to a point on the boundary line between New Brunswick and Quebec, at the foot of Beau Lake, in lieu

SESSIONAL PAPER No. 20

of the subsidy granted by chapter 40 of 1907, section 1, item 25; not exceeding 18 miles.

14. To the York and Carleton Railway Company, for a line of railway from its present terminus to a point on the National Transcontinental Railway, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 33; not exceeding 9 miles.

15. For a line of railway from a point on the Canadian Pacific Railway at or near Plaster Rock to Riley Brook, in lieu of the subsidy granted by chapter 63, of 1908, section 1, item 31; not exceeding 28 miles.

16. To the Atlantic, Quebec and Western Railway Company, for a line of railway from Paspébiac to Gaspé, as near the shore as practicable, in lieu of the subsidy granted by chapter 43 of 1906, section 1, item 9, for a line between the points above mentioned; not exceeding 102 miles.

17. To the Canadian Northern Quebec Railway Company, for a line of railway from a point at or near Arundel to a point in the municipality of the united townships of Preston and Hartwell, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 11, for a line of railway between the points above mentioned; not exceeding 30 miles.

18. For a line of railway from Roberval westward towards James Bay, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 9; not exceeding 100 miles.

19. To the Quebec and Lake St John Railway Company, for the following lines of railway:—

(a) from Valcartier station to St. Catherine, not exceeding 3·8 miles;

(b) from Valcartier station towards Gosford, not exceeding 5½ miles;

(c) from the end of the 35th mile of the branch to La Tuque, on the River St. Maurice, to La Tuque Falls, not exceeding 5 miles;

(d) from La Tuque Falls to the mouth of the River Croche, not exceeding 5 miles;

(e) from a point on the La Tuque branch to the steamboat landing near La Tuque, not exceeding 1·6 miles;

(f) from Herbertville to St. Joseph d'Alma; not exceeding 10 miles;

(g) from Chicoutimi south or southeast; not exceeding 5 miles;

the said subsidies being granted in lieu of the subsidies granted by chapter 63 of 1908, section 1, items 43, 44 and 72, respectively; not exceeding 35·9 miles.

20. To the Quebec and New Brunswick Railway Company, for a line of railway from Chaudière Junction to a point at or near the International boundary, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 25; not exceeding 62 miles.

21. To the Eastern Townships Railway Company, for a line of railway from the Intercolonial Railway at St. Leonard's

Junction

Junction to Dudswell, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 41; not exceeding 36 miles.

22. To the L'Avenir and Melbourne Railway Company for a line of railway from Melbourne to Drummondville, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 71; not exceeding 28 miles.

23. To the Lotbinière and Megantic Railway Company, for a line of railway to extend its railway southerly from a point at or near Lyster, in Megantic county, to or towards a point at or near Line Ridge, in the township of Dudswell, not exceeding 50 miles; and for a line of railway from a point on its line in the township of Inverness, to a point at or near the bridge over the St. Lawrence River at or near Quebec; not exceeding 30 miles; in lieu of the subsidies granted by chapter 63 of 1908, section 1, item 19; not exceeding in all 80 miles.

24. For a line of railway from Joliette to or near Lake Manuan, in lieu of the subsidy granted by chapter 57 of 1903, section 2, item 9, not exceeding 60 miles.

25. For a line of railway from St. Joachim towards Seven Islands, including branches to Murray Bay and Baie St. Paul, in lieu of the subsidy granted by chapter 43 of 1906, section 1, item 11; not exceeding 170 miles.

26. For a line of railway from a point at or near Ste. Agathe des Monts station towards the township of Howard, in the county of Argenteuil, passing near Lake St. Joseph and St. Mary in a southerly direction, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 26; not exceeding 15 miles.

27. To the Ha Ha Bay Railway Company, for a line of railway from a point at or near Jonquières village to Baie des Ha Ha, via Laterrière village, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 24; not exceeding 24 miles.

28. To the St. Mary's and Western Ontario Railway Company, for a line of railway from Embro to Exeter, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 60; not exceeding 36 miles.

29. To the Manitoulin and North Shore Railway Company for the following lines of railway:—

(a) from a point on the said company's line of railway between Little Current and Sudbury, westerly towards the Algoma Central and Hudson Bay Railway; not exceeding 76 miles;

(b) from Little Current thence crossing the Canadian Pacific Railway, at or near Stanley, and thence to Sudbury; not exceeding 88 miles;

(c) from a point at or near Sudbury, northerly, not exceeding 30 miles;

the said subsidies being granted in lieu of the subsidies granted by chapter 63 of 1908, section 1, item 51; not exceeding in all 194 miles.

SESSIONAL PAPER No. 20

30. To the Algoma Central and Hudson Bay Railway Company for the following lines of railway:—

- (a) from Sault Ste. Marie to a point on the Canadian Pacific Railway between White River and Dalton stations in the district of Algoma, not exceeding 200 miles;
- (b) from Michipicoten Harbour, Lake Superior, towards the main line of the Canadian Pacific Railway, not exceeding 25 miles;
- (c) from a point on the Canadian Pacific Railway, northerly, towards the National Transcontinental Railway, not exceeding 50 miles;

the said subsidies being granted in lieu of the subsidies granted by chapter 43 of 1906, section 1, item 2, and chapter 63 of 1908, section 1, item 61; not exceeding in all 275 miles.

31. To the Bracebridge and Trading Lake Railway Company, for a line of railway from Bracebridge, in Muskoka, to a point at or near Baysville, Ontario, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 8; not exceeding 16 miles.

32. To the Lac Seul, Rat Portage and Keewatin Railway Company, for a line of railway from a point at or near Kenora to the National Transcontinental Railway, in lieu of subsidy granted by chapter 63 of 1908, section 1, item 63, for 18 miles; not exceeding 22 miles.

33. To the Canadian Northern Quebec Railway Company, for a line of railway from Montreal to Hawkesbury, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 48; not exceeding 65 miles.

34. To the Nipigon Railway Company for the following lines of railway:—

- (a) from a point at or near Nipigon station on the line of the Canadian Pacific Railway to Nipigon Lake; not exceeding 30 miles;
- (b) from a point on Nipigon Bay of Lake Superior to a point on the west of Lake Helen on the line of the Nipigon Railway; not exceeding 3½ miles;
- (c) from a point on the line of the Nipigon Railway at or near the crossing of the French River to a point on Lake Jesse, by way of Cameron's Falls; not exceeding 1½ miles;
- (d) from a point on the north shore of Lake Nipigon, northerly; not exceeding 45 miles.

the said subsidies being granted in lieu of the subsidies granted by chapter 63 of 1908, section 1, item 4: not exceeding in all 80 miles.

35. To the Ontario, Northern and Timagami Railway Company, for a line of railway from a point at or near Sturgeon Falls, in a northwesterly direction, to a point on the westerly shore of Lake Timagami, in the district of Nipissing, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 6; not exceeding 50 miles.

36. For a line of railway from Sharbot Lake or Bathurst station, in the province of Ontario, or between these points, via
Lanark

Lanark village, to Carleton Place, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 3; not exceeding 41 miles.

37. To the Eric, London and Tillsonburg Railway Company, for a line of railway from Port Burwell to London, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 29; not exceeding 35 miles.

38. To the Toronto, Lindsay and Pembroke Railway Company, for a line of railway from Golden Lake to Bancroft, in lieu of the subsidy granted by chapter 43 of 1906, section 1, item 41; not exceeding 51 miles.

39. To the Kingston, Smith's Falls and Ottawa Railway Company, for a line of railway from Kingston to Ottawa, in lieu of the subsidy granted by chapter 43 of 1906, section 1, item 19; not exceeding 101 miles.

40. To the Pacific, Northern and Omineca Railway Company, for a line of railway from Edmonton, northwesterly, to or towards the Peace River, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 51; not exceeding 110 miles.

41. To the Southern Central Pacific Railway Company, for the following lines of railway:—

(a) from a point two miles west of Pincher station on the Crow's Nest Pass branch of the Canadian Pacific Railway, northeasterly; not exceeding 10 miles;

(b) from a point two miles west of Pincher station on the Crow's Nest Pass branch of the Canadian Pacific Railway, southwesterly; not exceeding 40 miles;

the said subsidies being granted in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 37; not exceeding in all 50 miles.

42. To the Kettle River Valley Railway Company, for the following lines of railway:—

(a) from Midway to a junction near Merritt with the Nicola, Kamloops and Similkameen Railway; not exceeding 250 miles;

(b) from a point on the Company's line of railway near Coldwater River to a point on the Fraser River; not exceeding 50 miles;

the said subsidies being granted in lieu of the subsidies granted by chapter 40 of 1907, section 1, item 18, and chapter 63 of 1908, section 1, items 58 and 59, respectively; not exceeding in all 300 miles.

43. To the Kootenay Central Railway Company, for a line of railway from Golden towards the International boundary via Windermere and Fort Steele, thence crossing the Crow's Nest Pass Railway, at or near Elko; in lieu of the subsidy granted by chapter 43 of 1906, section 1, item 31; not exceeding 186 miles.

44. To the Esquimalt and Nanaimo Railway Company, for a line of railway from a point on its main line of railway, at or near Duncan's to Cowichan Lake, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 67; not exceeding 24 miles.

SESSIONAL PAPER No. 20

45. For a line of railway from Montreal to a point on the National Transcontinental Railway, in lieu of subsidy granted by chapter 63 of 1908, section 1, item 49; not exceeding 200 miles.

46. To the Little Nation River Railway Company, for a line of railway from Papineauville, on the Canadian Pacific Railway, towards Lake Nominig, in lieu of subsidy granted by chapter 63 of 1908, section 1, item 70; not exceeding 30 miles.

2. In this Act, unless the context otherwise requires, the expression "cost" means the actual, necessary and reasonable cost, and shall include the amount expended upon any bridge, up to and not exceeding \$25,000, forming part of the line of railway subsidized not otherwise receiving any bonus, but shall not include the cost of equipping the railway nor the cost of terminals nor the cost of right of way of the railway in any city or incorporated town; and such actual, necessary and reasonable cost shall be determined by the Governor in Council, upon the recommendation of the Minister of Railways and Canals, and upon the report of the chief engineer of the Department of Railways and Canals, certifying that he has made or caused to be made an inspection of the line of railway for which payment of subsidy is asked, and careful inquiry into the cost thereof, and that in his opinion the amount upon which the subsidy is claimed is reasonable, and does not exceed the true, actual and proper cost of the construction of such railway.

3. The subsidies hereby authorized towards the construction of any railway shall be payable out of the Consolidated Revenue Fund of Canada, and may, unless otherwise expressly provided in this Act, at the option of the Governor in Council, on the report of the Minister of Railways and Canals, be paid as follows:—

- (a) Upon completion of the work subsidized; or,
- (b) By instalments, on the completion of each ten-mile section of the railway, in the proportion which the cost of such completed section bears to that of the whole work undertaken; or,
- (c) Upon the progress estimates on the certificate of the chief engineer of the Department of Railways and Canals that in his opinion, having regard to the whole work undertaken and the aid granted, the progress made justifies the payment of a sum not less than thirty thousand dollars; or,
- (d) With respect to (b) and (c), part one way, part the other.

4. The subsidies hereinbefore authorized to be granted to companies named shall, if granted by the Governor in Council, be granted to such companies respectively; the other subsidies may be granted to such companies as establish to the satisfaction of the Governor in Council their ability to construct and complete the said railways respectively; all the lines for the construction of which subsidies are granted, unless they are already

already commenced, shall be commenced within two years from the first day of August, 1910, and completed within a reasonable time, not to exceed four years from the said first day of August, to be fixed by the Governor in Council, and shall also be constructed according to descriptions, conditions and specifications approved by the Governor in Council on the report of the Minister of Railways and Canals, and specified in each case in a contract between the company and the said Minister, which contract the Minister, with the approval of the Governor in Council, is hereby empowered to make. The location also of such subsidized lines shall be subject to the approval of the Governor in Council.

As to running powers.

5. The granting of such subsidies and the receipt thereof by the respective companies shall be subject to the condition that the Board of Railway Commissioners for Canada may at all times provide and secure to other companies such running powers, traffic arrangements and other rights as will afford to all railways connecting with the railway so subsidized reasonable and proper facilities in exercising such running power, fair and reasonable traffic arrangements with connecting companies, and equal mileage rates between all such connecting railways; and the said Board shall have absolute control, at all times, over the rates and tolls to be levied and taken by any of the companies, or upon any of the railways hereby subsidized: Provided always that any decision of the said Board made under this section may be at any time varied, changed or rescinded by the Governor in Council, as he deems just and proper.

Proviso.

Transportation of Government supplies, etc.

6. Every company receiving a subsidy under this Act, its successors and assigns, and any person or company controlling or operating the railway or portion of railway subsidized under this Act, shall each year furnish to the Government of Canada transportation for men, supplies, materials and mails over the portion of the lines in respect of which it has received such subsidy, and, whenever required, shall furnish mail cars properly equipped for such mail service; and such transportation and service shall be performed at such rates as are agreed upon between the Minister of the department of the Government for which such service is being performed and the company performing it, and, in case of disagreement, then at such rates as are approved by the Board of Railway Commissioners for Canada; and in or towards payment for such charges the Government of Canada shall be credited by the company with a sum equal to three per cent per annum on the amount of the subsidy received by the company under this Act.

Production of accounts.

7. As respects all railways for which subsidies are granted by this Act, the company at any time owning or operating any

SESSIONAL PAPER No. 20

any of the railways shall, when required, produce and exhibit to the Minister of Railways and Canals, or any person appointed by him, all books, accounts and vouchers showing the cost of constructing the railway, the cost of operating it, and the earnings thereof.

8. The Governor in Council may make it a condition of the grant of the subsidies herein provided that the company shall lay the railway with new steel rails and fastenings made in Canada and shall purchase all materials and supplies required for the construction of the railway, and the rolling stock for the first equipment of the railway, from Canadian producers, if such rails, fastenings, materials, supplies and equipment are procurable in Canada of suitable quality and upon terms as favourable as elsewhere, of which the Minister of Railways and Canals shall be the judge.

As to
Canadian
steel rails.

9. Whenever a contract has been duly entered into with a company for the construction of any line of railway hereby subsidized, the Minister of Railways and Canals, at the request of the company, and upon the report of the chief engineer of the Department of Railways and Canals, and his certificate that he has made careful examination of the surveys, plans and profile of the whole line so contracted for, and has duly considered the physical characteristics of the country to be traversed and the means of transport available for construction, naming the reasonable and probable cost of such construction, may, with the authorization of the Governor in Council, enter into a supplementary agreement, fixing definitely the maximum amount of the subsidy to be paid, based upon the said certificate of the chief engineer, and providing that the company shall be entitled to be paid, as the minimum, the ordinary subsidy of \$3,200 per mile, together with sixty per cent of the difference between the amount so fixed and the said \$3,200 per mile, if any; and the balance, forty per cent, shall be paid only on completion of the whole work subsidized, and in so far as the actual cost, as finally determined by the Governor in Council upon the recommendation of the Minister of Railways and Canals, and upon the report and certificate of the said chief engineer, entitles the company thereto: Provided always—

Mode of
payment of
certain
railway
subsidies.

Proviso.

(a) that the estimated cost, as certified, is not less on the average than \$18,000 per mile for the whole mileage subsidized;

(b) that no payment shall be made except upon a certificate of the chief engineer that the work done is up to the standard specified in the company's contract;

(c) that in no case shall the subsidy exceed the sum of \$6,400 per mile.

2 GEORGE V.

CHAP. 7.

An Act to aid the construction of the Canadian Northern Alberta Railway.

[Assented to 1st April, 1912.]

WHEREAS, by chapter 6 of the statutes of 1910, authority ^{Preamble.} was given to the Governor in Council to aid and assist the construction of the line of railway of the Canadian Northern Alberta Railway Company, hereinafter called "the Company," by guaranteeing the principal and interest of the bonds, debentures, debenture stock or other securities of the Company to the extent of thirteen thousand dollars per mile for the first fifty miles of the line so aided, and for the remainder of the said line to an amount of twenty-five thousand dollars per mile, not exceeding in all one hundred and fifty miles, as in the said Act set out, and the Governor in Council, pursuant to the said authority, has granted such aid accordingly; and whereas the Company has authority, under the said Act, to construct and operate a line of railway from a point at or near Edmonton or Strathcona to a point in the province of British Columbia in or near the Yellowhead Pass, and fifty miles west of the boundary of the said province: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The Canadian Northern Alberta Railway Aid Act, 1912.* ^{Short title.}

2. His Majesty on behalf of the Dominion of Canada, hereinafter called "the Dominion," may aid and assist the construction and completion of a line of railway of the Company extending from a point on the line of the railway ^{Aid authorized.}

Line of railway aided.	of the Company one hundred and fifty miles westerly from St. Albert, thence in a westerly direction to the boundary of the province of British Columbia at or in the Yellowhead Pass, for a distance not exceeding one hundred and fifteen miles, by guaranteeing the principal and interest of the bonds, debentures, debenture stocks and other securities, hereinafter called "securities," secured as hereinafter mentioned, of the Company, to the extent of thirty-five thousand dollars per mile of the said line of railway so aided, not exceeding in all one hundred and fifteen miles; the interest upon the said securities to be paid at the rate of three and one-half per cent per annum, payable half yearly, the principal to be payable in fifty years from the passing of this Act.
Nature of aid.	
Interest.	
Maturity of principal.	
Security.	3. The said securities so guaranteed shall be secured by a deed or deeds of trust by way of mortgage or charge to a trustee or trustees, approved of by the Governor in Council, and such deed or deeds of trust shall respectively grant a first mortgage or charge upon the said line of railway so aided, and the right of way, station grounds, or other real estate and interest therein, buildings and other structures and improvements, rolling stock and equipment, plant, machinery, tools, supplies, materials and other personal properties, present and future, acquired for the purposes of the said line so aided, and in connection with operating, repairing and maintaining it, and the tolls, incomes and revenues of the Company arising and to arise from the said line, and the rights, privileges, franchises and powers of the Company now or hereafter held with respect to and in connection with the said line and the operation, maintenance and repair thereof.
First mortgage.	
Nature of securities, and form of trust deed.	4. The kind of securities to be guaranteed as aforesaid, and the forms thereof, and the form and terms of the deed or deeds of trust securing them, and the times and manner of the issue of securities and the disposition of the moneys to be raised thereon by sale, pledge or otherwise, pending the expenditure of such moneys for the purposes of the line of railway so aided, and the forms and manner of guarantee, shall be such as the Governor in Council approves, and such terms, provisions and conditions may be included in such deed or deeds of trust as the Governor in Council deems expedient or necessary.
Signature to guarantees.	5. The said guarantee shall be signed by the Minister of Finance, or such officer as is designated by the Governor in Council to sign it; and upon being so signed the Dominion shall become liable as guarantor for the payment of the principal and interest of the securities so guaranteed, according
Effect.	

SESSIONAL PAPER No. 20

according to the tenor thereof, and the said payment shall form a charge upon the Consolidated Revenue Fund.

6. Any moneys paid by the Dominion under any guarantee herein provided for shall be held to be paid in discharge of the liability of the Dominion and not in discharge of the liability of the Company under the securities so guaranteed, or under any deed of trust securing them, and the moneys so paid shall be held to be still secured by the said securities and deed of trust, and the Dominion shall be subrogated in and to all the rights of the holders of such securities, the interest upon or the principal of which has been paid by the Dominion, and the Dominion shall, with respect to all moneys so paid, be in all respects in the position of security holders with respect to whose securities default has been made in payment to the extent of the moneys paid by the Dominion.

Liability of Dominion discharge. l by payments

7. The decision of the Governor in Council as to the length of the mileage of the said line of railway so to be aided shall, for the purposes of this Act, be final.

Length of lines.

8. The books of the Company shall at all times be open for inspection for and on behalf of the Dominion by any person named in that behalf by the Governor in Council or the Minister of Finance.

Inspection of books.

9. The Canadian Northern Railway Company shall, by guarantee included in the said deed or deeds of trust, or in some other instrument agreed to by the Governor in Council or the Minister of Finance and the last named company, in such form as the Governor in Council approves, guarantee to the Dominion the due payment by the Company of the principal and interest of all securities issued and guaranteed under the provisions of this Act, according to the tenor and effect of such securities respectively, and in accordance with the terms of the said deed or deeds of trust, and shall also guarantee to the Dominion the due payment by the Company of all loss or costs which the Dominion may sustain or be put to in enforcing, after default, the provisions of the said deed or deeds of trust against the line of railway and premises thereby mortgaged and charged.

Guarantee by Canadian Northern Railway.

Principal and interest.

Costs of default.

10. The line hereby aided, as set forth or described in section 2 of this Act, shall be constructed and completed according to the following specifications:—

Standard of construction.

Bridges over rivers and large streams are to be of concrete and steel construction and to be built to the classification of the Heavy Standard Specification of the Department of Railways and Canals, dated one thousand nine hundred and eight.

Bridges.

Bridges

5 GEORGE V., A. 1915

- Trestles. Bridges of pile or frame trestle may be constructed over
Culverts. small streams which can be taken care of by culverts, such
culverts to be constructed within a reasonable time after
the line is put in operation, of which time the Governor in
Council shall be the sole judge.
- Rails. The line of railway shall be laid with steel rails, not less
than eighty pounds to the lineal yard, with standard
fastenings.
- Curves and
grades. The maximum curvature shall not be of less radius than
seven hundred and sixteen feet, and the grades against
east bound traffic shall not exceed five-tenths of one per
cent, or 26·40 feet per mile; or six-tenths of one per cent,
or 31·68 feet per mile, against west-bound traffic; provided
that under exceptional conditions, with the consent of the
Governor in Council, less radius of curvature and heavier
grades may be allowed, on the recommendation of the
chief engineer of the Department of Railways and Canals,
approved by the Minister of Railways and Canals, but in
no case shall the curvature exceed five hundred and seventy-
three feet radius, or the gradients exceed 52·80 feet to the
mile.

2 GEORGE V.

CHAP. 8.

An Act respecting aid toward the construction of the Canadian Northern Alberta Railway.

[Assented to 1st April, 1912.]

HIS Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The Canadian Northern Alberta Railway Act, 1912.* Short title.

2. The aid and assistance which, under *The Canadian Northern Alberta Railway Act, 1910*, (hereinafter called "the said Act"), the Governor in Council was authorized to give to the Canadian Northern Alberta Railway Company (hereinafter called "the Company") in respect of the construction of the one hundred and fifty miles of the line of railway therein described (hereinafter called "the old line") may, notwithstanding anything in the said Act, be applied to the first one hundred and fifty miles of the Company's line of railway at present constructed or located running from St. Albert, in the province of Alberta, in a generally westerly direction toward the Yellowhead Pass, such last mentioned one hundred and fifty miles being herein referred to as "the new line." Aid to company may be applied to new line.

3. The Governor in Council may cause to be executed by the Minister of Finance, or such other officer as the Governor in Council may designate, an instrument, in form approved by the Governor in Council, supplementary to the deed of trust, by way of mortgage or charge, made under the authority of the said Act and dated the twenty-second

5 GEORGE V., A. 1915

day of March one thousand nine hundred and eleven, (herein called the original mortgage), for the purpose of giving effect to the provisions of this Act.

Securities already issued to be a charge on new line.

1. Upon the execution of such instrument by the Company and the Minister of Finance, or the other person as aforementioned, the securities issued under the original mortgage shall form a charge upon the new line instead of upon the old line, and the proceeds of the guaranteed securities issued under the original mortgage shall thereupon be applied in and toward the construction of the new line.

Trustees to execute.

5. The trustees of the original mortgage shall concur with the Company and the Governor in Council in executing, or causing to be executed, the supplementary instrument aforementioned.

Amendment of contract for construction.

6. Upon the passing of this Act the contract made between His Majesty the King and the Company, dated the second day of September, one thousand nine hundred and eleven, in respect of the construction of the line of railway aided under the said Act may be amended by the parties thereto so as to provide for the construction and completion of the new line instead of the line therein mentioned, and the several parties to the said contract and to the original mortgage are hereby authorized and empowered to execute the several documents and make the several amendments necessary to carry into effect the intent of this Act.

2 GEORGE V.

CHAP. 9.

An Act to authorize the granting of a Subsidy to the Canadian Northern Pacific Railway Company in aid of the construction of the railway therein mentioned.

[Assented to 1st April, 1912.]

HIS Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The Canadian Northern Pacific Railway Aid Act*. Short title.

2. The Governor in Council may grant a subsidy of twelve thousand dollars per mile to the Canadian Northern Pacific Railway Company towards the construction of a railway from a point at Yellowhead Pass to Vancouver and the mouth of the Fraser river, not exceeding five hundred and twenty-five miles. Subsidy authorized.

3. The said subsidy shall be payable out of the Consolidated Revenue Fund of Canada and may, at the option of the Governor in Council, on the report of the Minister of Railways and Canals, be paid as follows:— Manner and conditions of payment.

- (a) upon the completion of the work subsidized; or,
- (b) by instalments, on the completion of each ten-mile section of the railway, in the proportion which the cost of such completed section bears to that of the whole work undertaken; the cost for the purposes of this paragraph to be determined by the Governor in Council; or,
- (c) upon the progress estimates on the certificate of the chief engineer of the Department of Railways

and Canals that in his opinion, having regard to the whole work undertaken and the aid granted, the progress made justifies the payment of a sum not less than thirty thousand dollars; or,

(d) with respect to (b) and (c), part one way part the other.

Time for construction limited.

4. The said railway, unless already commenced, shall be commenced within two years from the first day of August, nineteen hundred and twelve, and completed within a reasonable time, not to exceed four years from the said first day of August, to be fixed by the Governor in Council, and shall be constructed according to descriptions, conditions and specifications approved by the Governor in Council on the report of the Minister of Railways and Canals, and specified in a contract between the said Company and the said Minister, which contract the Minister, with the approval of the Governor in Council, is hereby empowered to make. The location of the said railway shall be subject to the approval of the Governor in Council.

Contract for construction.

Location.

Transportation of Government supplies, etc.

5. The said Company, its successors and assigns, and any person or company controlling or operating the said railway or portion thereof, shall each year furnish to the Government of Canada transportation for men, supplies, materials and mails over the portion of the railway in respect of which it has received such subsidy, and, whenever required, shall furnish mail cars properly equipped for such mail service; and such transportation and service shall be performed at such rates as are agreed upon between the Minister of the Department of the Government for which such service is being performed and the company performing it, and in case of disagreement then at such rates as are approved by the Board of Railway Commissioners for Canada; and in or towards payment for such charges the Government of Canada shall be credited by the said Company with a sum equal to three per cent per annum on the amount of the subsidy received by the Company under this Act.

Production of accounts.

6. As respects the railway for which such subsidy is granted the Company at any time owning or operating it shall, when required, produce and exhibit to the Minister of Railways and Canals, or any person appointed by him, all books, accounts and vouchers, showing the cost of constructing the railway, the cost of operating it, and the earnings thereof.

Canadian steel rails, materials, and rolling stock.

7. The Governor in Council may make it a condition of the granting of the subsidy herein provided that the said Company shall lay the railway with new steel rails and fastenings made in Canada, and shall purchase all materials and

SESSIONAL PAPER No. 20

and supplies required for the construction of the railway, and the rolling stock for the first equipment of the railway, from Canadian producers, if such rails, fastenings, materials, supplies and equipment are procurable in Canada of suitable quality and upon terms as favourable as elsewhere, of which the Minister of Railways and Canals shall be the judge.

2 GEORGE V.

CHAP. 48.

An Act to authorize the granting of Subsidies in aid of the construction of the railways and bridges therein mentioned.

[Assented to 1st April, 1912.]

HIS Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The Railway Subsidies Act, 1912.* Short title.

2. The Governor in Council may grant a subsidy of \$3,200 per mile towards the construction of each of the undermentioned lines of railway (not exceeding in any case the number of miles hereinafter respectively stated) which shall not cost more on the average than \$15,000 per mile for the mileage subsidized, and towards the construction of each of the said lines of railway, not exceeding the mileage hereinafter stated, which shall cost more on the average than \$15,000 per mile for the mileage subsidized, a further subsidy beyond the sum of \$3,200 per mile of fifty per cent on so much of the average cost of the mileage subsidized as is in excess of \$15,000 per mile, such subsidy not exceeding in the whole the sum of \$6,400 per mile:—

1. For a line of railway from Liverpool, via Milton, to Caledonia, Nova Scotia, in lieu of the subsidy granted by chapter 40 of 1907, section 1, item 5; not exceeding 30 miles.

2. For a line of railway from St. John to Grand Falls, New Brunswick, exclusive of a railway bridge across the Kennebecasis

5 GEORGE V., A. 1915

Kennebecasis River, at or near Perry Point, and two railway bridges across the St. John River, one at or near Mistake and one at or near Andover; in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 12; not exceeding 228 miles.

3. To the L'Avenir and Melbourne Railway Company for a line of railway from Melbourne to Drummondville, in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 22; not exceeding 28 miles.

4. To the Ha Ha Bay Railway Company for the following lines of railway:—

(a) from a point on the Quebec and Lake St. John Railway in the township of Jonquières, at or near St. Mathias, to Ha Ha Bay; not exceeding 20 miles;

(b) from Labrosse Junction to the Saguenay River, northerly through the town of Chicoutimi; not exceeding 5 miles;

(c) from La Terrière Junction, southerly, to Lake Kenogami, via La Terrière village; not exceeding 12 miles.

(d) from a point on the Ha Ha Bay Railway, at or near Bagotville village, easterly, to the village of St. Alexis; not exceeding 3 miles;

the said subsidies sub-items (a), (c) and (d) being granted in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 27; and the subsidy sub-item (b) being granted in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 19, sub-item (g); not exceeding in all 40 miles.

5. For a line of railway at or near Ste. Agathe des Monts station towards the township of Howard, in the county of Argenteuil, passing near Lake St. Joseph and St. Mary in a southerly direction, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item '26; not exceeding 15 miles.

6. To the Interprovincial and James Bay Railway Company, for a line of railway from a point on the Lake Temiscamingue Colonization Railway at or near Timiskaming to or towards the De Quinze River; in lieu of the subsidy granted by chapter 43 of 1906, section 1, item 42; not exceeding 50 miles.

7. To the Canadian Northern Quebec Railway Company, for a line of railway from a point at or near Arundel to a point in the municipality of the united townships of Preston and Hartwell, in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 17; not exceeding 30 miles.

8. To the Quebec and Saguenay Railway Company, for the following lines of railway:—

(a) from St. Joachim, northeasterly; not exceeding 62.8 miles;

(b) from a point 62.8 miles northeasterly from St. Joachim towards Seven Islands; not exceeding 107.2 miles;

the

SESSIONAL PAPER No. 20

the said subsidies being granted in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 25; not exceeding in all 170 miles.

9. For a line of railway from a point at or near Montreal to a point at or near Mile 837 west of Moncton on the National Transcontinental Railway, in lieu of subsidy granted by chapter 51 of 1910, section 1, item 45; not exceeding 200 miles.

10. To the Algoma Central and Hudson Bay Railway Company, for the following lines of railway:—

(a) from Sault Ste. Marie to a point on the Canadian Pacific Railway between White River and Dalton stations in the district of Algoma; not exceeding 200 miles;

(b) from Michipicoten Harbour, Lake Superior, towards the main line of the Canadian Pacific Railway; not exceeding 25 miles;

(c) from a point on the Canadian Pacific Railway, northerly, towards the National Transcontinental Railway; not exceeding 50 miles;

the said subsidies being granted in lieu of the subsidies granted by chapter 51 of 1910, section 1, item 30; not exceeding in all 275 miles.

11. To the Algoma Eastern Railway Company (formerly the Manitoulin and North Shore Railway Company) for the following lines of railway:—

(a) from a point on the said company's line of railway between Little Current and Sudbury, westerly towards the Algoma Central and Hudson Bay Railway; not exceeding 76 miles;

(b) from a point at or near Sudbury, northerly; not exceeding 30 miles;

the said subsidies being granted in lieu of the subsidies granted by chapter 51 of 1910, section 1, item 29, sub-items (a) and (c) respectively; not exceeding in all 106 miles.

12. To the Tillsonburg, Lake Erie and Pacific Railway Company, for a line of railway from Ingersoll to Stratford, or to a point on the Grand Trunk Railway between Berlin and Stratford, in lieu of the subsidy granted by chapter 40 of 1907, section 1, item 12; not exceeding 35 miles.

13. To the Lac Seul, Rat Portage and Keewatin Railway Company, for a line of railway from a point at or near Kenora to the National Transcontinental Railway, in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 32; not exceeding 22 miles.

14. To the Toronto, Lindsay and Pembroke Railway Company, for a line of railway from Golden Lake to Bancroft, in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 38; not exceeding 51 miles.

15. To the Canadian Pacific Railway Company, for a line of railway from a point at or near Teulon to a point on
the

the Icelandic River, in lieu of the subsidy granted by chapter 43 of 1906, section 1, item 27; not exceeding 35 miles.

16. To the Vancouver, Westminster and Yukon Railway Company, for a line of railway from Vancouver via Second Narrows of Burrard Inlet, northerly, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 55; not exceeding 100 miles.

17. To the Kootenay Central Railway Company, for the following lines of railway:—

(a) from Golden via Windermere and Fort Steele to a point on the British Columbia Southern Railway at or near Jukeson; not exceeding 175 miles;

(b) from a point on the British Columbia Southern Railway at or near Caithness towards the International boundary; not exceeding 25 miles;

the said subsidies being granted in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 43; not exceeding in all 200 miles.

18. To the Kettle Valley Railway Company, for a line of railway from a point at or near Grand Forks to a point 50 miles up the North Fork, and East or West Fork of North Fork, of Kettle River, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 1; not exceeding 50 miles.

19. To the Esquimalt and Nanaimo Company, for the following lines of railway:—

(a) from Wellington to Alberni; not exceeding 60 miles;

(b) from a point at or near McBride Junction to or towards the village of Sandwich; not exceeding 45 miles;

(c) from the village of Sandwich to Campbell River; not exceeding 38 miles;

the said subsidies being granted in lieu of the subsidies granted by chapter 40 of 1907, section 1, item 20, and chapter 63 of 1908, section 1, item 35; not exceeding in all 143 miles.

20. For a line of railway from a point on the Esquimalt and Nanaimo Railway, near Campbell River, towards Fort George, on the line of the Grand Trunk Pacific Railway, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 54; not exceeding 100 miles.

21. To the Fredericton and Grand Lake Coal and Railway Company, for a line of railway from a point on the Intercolonial Railway at Gibson to a point at or near Minto, together with a branch line from a point on the above mentioned line to Marysville; not exceeding 35 miles.

22. To the Great Northern Mining and Railway Company, Limited, for a line of railway from Little River through Belle Marche to Eastern Harbour; not exceeding 3 miles.

23. To the Southampton Railway Company, for a line of railway from a point at or near Millville to a point on the St. John River near the Pokiok Bridge; not exceeding 13 miles.

SESSIONAL PAPER No. 20

24. To the Northern New Brunswick and Seaboard Railway Company, for a line of railway from the Drummond mines, at Austin Brook, a branch of the Nipisiguit River above Great Falls, in the county of Gloucester, to a point on the Intercolonial Railway, and from such point to Alston Point, on the north side, or to Caron Point, on the south side of the entrance to Bathurst Harbour in the said county; not exceeding 26 miles.

25. To the North Shore Railway Company, for the following lines of railway:—

(a) from a point at or near Adamsville, in the county of Kent, to a point at or near Snowshoe Lake in the said county, connecting with the Grand Trunk Pacific Railway; not exceeding 20 miles;

(b) from Beersville, in the county of Kent, via Roxton, to a point at or near Richibucto Head, in the said county; not exceeding 20 miles;

not exceeding in all 40 miles.

26. For a line of railway from a point at or near Rosevale in the County of Albert to Stoney Creek in the said county, and thence to the city of Moncton; not exceeding 22 miles.

27. To the Quebec Central Railway Company, for the following lines of railway:—

(a) for an extension of its line of railway from a point (30 miles from St. George) in the parish of St. Justine, county of Dorchester, to a point in the parish of St. Sabine, in the county of Bellechasse; not exceeding 1·34 miles;

(b) for an extension of its line of railway from a point (31·34 miles from St. George) in the parish of St. Sabine, county of Bellechasse, to a point in the township of Dionne, county of L'Islet; not exceeding 50 miles; not exceeding in all 51·34 miles.

28. To the Canada and Gulf Terminal Railway Company, for a line of railway from Matane, easterly, to Gaspé Basin; not exceeding 200 miles.

29. To the Grand Lake and Bell River Railway Company, for a line of railway from a point on the National Transcontinental Railway, at or near Bell River, thence following the direction of Bell River to Twenty-one Mile Bay, an arm of Grand Lake, or to Rabbit Lake on the Ottawa River, in the county of Pontiac; not exceeding 45 miles.

30. To the St. Charles and Huron River Railway Company, for a line of railway from a point on the main line of the Quebec and Lake St. John Railway, at Indian Lorette station, thence up the valley of the St. Charles River in a northerly direction to Stoneham; not exceeding 7·5 miles.

31. For a line of railway from a point on the National Transcontinental Railway, at or near Mile 837 west of Moncton,

Moncton, in a northerly and northwesterly direction, to a point at or near the mouth of the Nottaway River on James Bay; not exceeding 300 miles.

32. To the Simcoe, Grey and Bruce Railway Company, in respect of fifty miles of its proposed railway between the towns of Kincardine and Orillia, the said fifty miles to include that portion of the said line connecting the towns of Owen Sound and Meaford.

33. To the Algoma Central and Hudson Bay Railway Company, for a line of railway from a point fifty miles northerly from the junction of its line of railway with the Canadian Pacific Railway, northerly to a junction with the National Transcontinental Railway; not exceeding 65 miles.

34. To the Rainy River Radial Railway Company, for a line of railway from a point on the northern boundary of the state of Minnesota at or near the town of Fort Frances, to a point on the Lake of the Woods, at or near the mouth of Little Grassy River; not exceeding 50 miles.

35. To the Lake Erie and Northern Railway Company, for the following lines of railway:—

(a) from the town of Galt to Port Dover; not exceeding 58 miles;

(b) from the town of Paris (on the line from the town of Galt to Port Dover) to the village of Ayr; not exceeding 10 miles;

not exceeding in all 68 miles.

36. To the Bruce Mines and Algoma Railway Company, for a line of railway from a point on its line of railway at or near Rock Lake Mine in a generally northerly and easterly direction to or towards a point on the main line of the Canadian Pacific Railway near the crossing of the said railway of the Winneboga River; not exceeding 50 miles.

37. To the Manitoba and North Western Railway Company, for a line of railway from a point at or near Hamiota to a point at or near Birtle; not exceeding 30 miles.

38. To the Alberta Pacific Railway Company, for a line of railway from a point at or near the town of Cardston in a northwesterly direction via Pincher Creek to a point on the Crow's Nest Pass Branch of the Canadian Pacific Railway Company at or near Lundbreck, thence northerly and west of the Porcupine Hills towards Calgary; not exceeding 100 miles.

39. To the Burrard Inlet Tunnel and Bridge Company, for the following lines of railway:—

(a) from the town of Eburne on the Fraser River to a point at or near the mouth of Seymour Creek on the north shore of the Second Narrows; not exceeding 10 miles;

(b) from a point at or near Seymour Creek on the north shore of the Second Narrows to Deep Cove on the north arm of Burrard Inlet; not exceeding 5 miles;

(c)

SESSIONAL PAPER No. 20

(c) from a point at or near Seymour Creek on the north shore of the Second Narrows to a point on Horseshoe Bay; not exceeding 14 miles;

(d) from a point at or near Pender street in the city of Vancouver to a point at or near lot 264, North Vancouver; not exceeding 3 miles;

not exceeding in all 32 miles.

40. To the Caribou, Barkerville and Willow River Railway Company, for a line of railway from a point on the Grand Trunk Pacific Railway, at or near Eagle Lake, to a point on the Caribou Road at or near the town of Barkerville; not exceeding 107 miles.

41. To the Naas and Skeena Rivers Railway Company, for a line of railway from the Nasoga Gulf or some other point on the waters of the Portland Inlet or Naas River to or towards the anthracite coal deposits on the Skeena River near Ground Hog Mountain; not exceeding 100 miles.

42. To the Kettle Valley Railway Company, for a line of railway from a point at or near Pentiction on Okanagan Lake to a point on the International boundary; not exceeding 50 miles.

43. To the Calgary and Fernie Railway Company, for a line of railway from a point at or near the city of Calgary in the province of Alberta, in a southwesterly direction, via Kananaskis Pass and the headwaters of the Elk River to or towards the city of Fernie, in the province of British Columbia; not exceeding 100 miles.

44. To the Grand Trunk Pacific Railway Company, for a line of railway from Harte southwesterly into the city of Brandon; not exceeding 25 miles.

3. The Governor in Council may grant the subsidies hereinafter mentioned towards the construction and completion of the bridges also hereinafter mentioned, that is to say:—

Subsidies for bridges.

1. To the Vancouver, Westminster and Yukon Railway Company, towards the construction and completion of a railway bridge across Burrard Inlet, in lieu of the subsidy granted by chapter 63 of 1908, section 2, item 6; not exceeding \$350,000.

2. To the Canadian Pacific Railway Company (lessees of the Calgary and Edmonton Railway Company) towards the construction and completion of a bridge over the Saskatchewan River connecting Strathcona and Edmonton, 15 per cent upon the amount expended thereon, in lieu of the subsidy granted by chapter 63 of 1908, section 2, item 2; not exceeding \$126,000.

3. To the Canadian Pacific Railway Company, towards the construction and completion of a bridge over the Saskatchewan River at Outlook, Saskatchewan, 15 per cent upon

upon the amount expended thereon; not exceeding \$115,000.

4. To the Kettle Valley Railway Company, towards the construction and completion of a railway bridge over the Fraser River, near Hope, British Columbia; not exceeding \$250,000.

5. To the Caribou, Barkerville and Willow River Railway Company, towards the construction and completion of all its railway bridges (about twenty in number) over the Willow River, 25 per cent upon the total amount expended thereon; not exceeding \$95,000.

6. To the Grand Trunk Pacific Railway Company, towards the construction and completion of a railway bridge over the Assiniboine River at the city of Brandon, 25 per cent upon the amount expended thereon; such bridge to be completed without unnecessary delay.

"Cost"
defined.

4. In this Act, unless the context otherwise requires, the expression "cost" means the actual, necessary and reasonable cost, and shall include the amount expended upon any bridge, up to and not exceeding \$25,000, forming part of the line of railway subsidized not otherwise receiving any bonus, but shall not include the cost of equipping the railway nor the cost of terminals nor the cost of right of way of the railway in any city or incorporated town; and such actual, necessary and reasonable cost shall be determined by the Governor in Council, upon the recommendation of the Minister of Railways and Canals, and upon the report of the chief engineer of the Department of Railways and Canals, certifying that he has made or caused to be made an inspection of the line of railway for which payment of subsidy is asked, and careful inquiry into the cost thereof, and that in his opinion the amount upon which the subsidy is claimed is reasonable, and does not exceed the true, actual and proper cost of the construction of such railway.

How
subsidies
shall be
paid.

5. The subsidies hereby authorized towards the construction of any railway or bridge shall be payable out of the Consolidated Revenue Fund of Canada, and may, unless otherwise expressly provided in this Act, at the option of the Governor in Council, on the report of the Minister of Railways and Canals, be paid as follows:—

- (a) Upon the completion of the work subsidized; or,
- (b) By instalments, on the completion of each ten-mile section of the railway, in the proportion which the cost of such completed section bears to that of the whole work undertaken; or,
- (c) Upon the progress estimates on the certificate of the chief engineer of the Department of Railways and Canals that in his opinion, having regard to the whole work undertaken and the aid granted, the progress
made

SESSIONAL PAPER No. 20

made justifies the payment of a sum not less than thirty thousand dollars; or,

(d) With respect to (b) and (c), part one way, part the other.

6. The subsidies hereinbefore authorized to be granted to companies named shall, if granted by the Governor in Council, be granted to such companies respectively; the other subsidies may be granted to such companies as establish to the satisfaction of the Governor in Council their ability to construct and complete the said railway and bridges respectively; all the lines and the bridges for the construction of which subsidies are granted, unless they are already commenced, shall be commenced within two years from the first day of August, 1912, and completed within a reasonable time, not to exceed four years from the said first day of August, to be fixed by the Governor in Council, and shall also be constructed according to descriptions, conditions and specifications approved by the Governor in Council on the report of the Minister of Railways and Canals, and specified in each case in a contract between the company and the said Minister, which contract the Minister, with the approval of the Governor in Council, is hereby empowered to make. The location also of such subsidized lines and bridges shall be subject to the approval of the Governor in Council. Conditions.

7. The granting of such subsidies and the receipt thereof by the respective companies shall be subject to the condition that the Board of Railway Commissioners for Canada may at all times provide and secure to other companies such running powers, traffic arrangements and other rights as will afford to all railways connecting with the railway and bridges so subsidized reasonable and proper facilities in exercising such running power, fair and reasonable traffic arrangements with connecting companies, and equal mileage rates between all such connecting railways; and the said Board shall have absolute control, at all times, over the rates and tolls to be levied and taken by any of the companies, or upon any of the railways and bridges hereby subsidized: Provided always that any decision of the said Board made under this section may be at any time varied, changed or rescinded by the Governor in Council, as he deems just and proper. As to running powers.

8. Every company receiving a subsidy under this Act, its successors and assigns, and any person or company controlling or operating the railway or portion of railway subsidized under this Act, shall each year furnish to the Government of Canada transportation for men, supplies, materials and mails over the portion of the lines in respect of which it Transportation of Government supplies, etc.
has

has received such subsidy, and, whenever required, shall furnish mail cars properly equipped for such mail service; and such transportation and service shall be performed at such rates as are agreed upon between the Minister of the department of the Government for which such service is being performed and the company performing it, and, in case of disagreement, then at such rates as are approved by the Board of Railway Commissioners for Canada; and in or towards payment for such charges the Government of Canada shall be credited by the company with a sum equal to three per cent per annum on the amount of the subsidy received by the company under this Act.

Production
of accounts.

9. As respects all railways and bridges for which subsidies are granted by this Act, the company at any time owning or operating any of the railways or bridges shall, when required, produce and exhibit to the Minister of Railways and Canals, or any person appointed by him, all books, accounts and vouchers showing the cost of constructing the railway or bridge, the cost of operating it, and the earnings thereof.

As to
Canadian
steel rails.

10. The Governor in Council may make it a condition of the grant of the subsidies herein provided that the company shall lay the railway with new steel rails and fastenings made in Canada and shall purchase all materials and supplies required for the construction of the railway and bridges, and the rolling stock for the first equipment of the railway, from Canadian producers, if such rails, fastenings, materials, supplies and equipment are procurable in Canada of suitable quality and upon terms as favourable as elsewhere, of which the Minister of Railways and Canals shall be the judge.

Mode of
payment of
certain
railway
subsidies.

11. Whenever a contract has been duly entered into with a company for the construction of any line of railway hereby subsidized, the Minister of Railways and Canals, at the request of the Company, and upon the report of the chief engineer of the Department of Railways and Canals and his certificate that he has made careful examination of the surveys, plans and profile of the whole line so contracted for, and has duly considered the physical characteristics of the country to be traversed and the means of transport available for construction, naming the reasonable and probable cost of such construction, may, with the authorization of the Governor in Council, enter into a supplementary agreement, fixing definitely the maximum amount of the subsidy to be paid, based upon the said certificate of the chief engineer and providing that the company shall be entitled to be paid, as the minimum, the ordinary subsidy of \$3,200 per mile, together with sixty per cent of the difference between the amount so fixed and the said \$3,200 per mile, if any; and the balance, forty per cent, shall be paid only on completion

SESSIONAL PAPER No. 20

completion of the whole work subsidized, and in so far as the actual cost, as finally determined by the Governor in Council upon the recommendation of the Minister of Railways and Canals, and upon the report and certificate of the said chief engineer, entitles the company thereto: Provided always—

- (a) that the estimated cost, as certified, is not less on the average than \$18,000 per mile for the whole milcage subsidized;
- (b) that no payment shall be made except upon a certificate of the chief engineer that the work done is up to the standard specified in the company's contract;
- (c) that in no case shall the subsidy exceed the sum of \$6,400 per mile.

3-4 GEORGE V.

CHAP. 10.

An Act to authorize the granting of subsidies in aid of the construction of certain lines of railway of the Canadian Northern Ontario Railway Company and the Canadian Northern Alberta Railway Company respectively.

[Assented to 6th June, 1913.]

HIS Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. The Governor in Council may grant a subsidy of six thousand four hundred dollars per mile to the Canadian Northern Ontario Railway Company, towards the construction of a railway from the city of Toronto, in the province of Ontario, to the city of Ottawa, in the said province, not exceeding two hundred and fifty miles.

Subsidy authorized for Toronto to Ottawa line.

2. The Governor in Council may grant a subsidy of twelve thousand dollars per mile towards each of the under-mentioned lines of railway (not exceeding in any case the number of miles hereinafter respectively stated) namely:—

For Ottawa to Port Arthur, and Edmonton to Yellowhead Pass.

- (a) to the Canadian Northern Ontario Railway Company, for a line of railway from the city of Ottawa, in the province of Ontario, to the city of Port Arthur in the said province; not exceeding 910 miles;
- (b) to the Canadian Northern Alberta Railway Company for a line of railway from the city of Edmonton, in the province of Alberta, to the boundary of the province of British Columbia at or in the Yellowhead Pass; not exceeding 260 miles.

How
subsides
shall be paid.

3. The subsidies hereby authorized shall be payable out of the Consolidated Revenue Fund of Canada and may, at the option of the Governor in Council, on the report of the Minister of Railways and Canals, be paid as follows;—

- (a) upon completion of the work subsidized; or,
- (b) by instalments, on the completion of each ten-mile section of the railway; in the proportion which the cost of such completed section bears to that of the whole work undertaken; the cost for the purpose of this paragraph to be determined by the Governor in Council; or,
- (c) upon the progress estimates on the certificate of the chief engineer of the Department of Railways and Canals that in his opinion, having regard to the whole work undertaken and the aid granted, the progress made justifies the payment of a sum not less than thirty thousand dollars; or,
- (d) with respect to (b) and (c), part one way, part the other.

Time for
construction
of railway
limited.

4. The lines, for the construction of which subsidies are hereby granted, shall be completed within a reasonable time, not to exceed three years from the first day of August, nineteen hundred and thirteen, to be fixed by the Governor in Council, and shall also be constructed and completed to the satisfaction of the Governor in Council.

Conditions
as to
running
powers.

5. The granting of such subsidies and the receipt thereof by the respective companies shall be subject to the condition that the Board of Railway Commissioners for Canada may at all times provide and secure to other companies such running powers, traffic arrangements and other rights as will afford to all railways connecting with the railway so subsidized reasonable and proper facilities in exercising such running power, fair and reasonable traffic arrangements with connecting companies, and equal mileage rates between all such connecting railways; and the said Board shall have absolute control, at all times, over the rates and tolls to be levied and taken by any of the companies, or upon any of the railways hereby subsidized; provided always that any decision of the said Board made under this section may be at any time varied, changed or rescinded by the Governor in Council as he deems just and proper.

Transporta-
tion of
Government
supplies, etc.

6. The Companies receiving subsidies under this Act, their successors and assigns, and any person or company controlling or operating the railways or portions of the railways subsidized under this Act, shall each year furnish to the

SESSIONAL PAPER No. 20

the Government of Canada transportation for men, supplies, materials and mails over the portion of the lines in respect of which it has received such subsidy, and, whenever required, shall furnish mail cars properly equipped for such mail service; and such transportation and service shall be performed at such rates as are agreed upon between the Minister of the Department of the Government for which such service is being performed and the company performing it, and, in case of disagreement, then at such rates as are approved by the Board of Railway Commissioners for Canada; and in and toward the payment of such charges the Government of Canada shall be credited by the company with a sum equal to three per cent on the amount of the subsidy received by the company under section 1 of this Act and on the amount of the subsidy up to six thousand four hundred dollars per mile received by the Company under section 2 of this Act.

7. As respects the railways for which subsidies are granted by this Act, the company at any time owning or operating any of the railways shall, when required, produce and exhibit to the Minister of Railways and Canals, or any person appointed by him, all books, accounts and vouchers showing the cost of constructing the railway, the cost of operating it, and the earnings thereof. Books to be produced.

8. No subsidy shall be granted under this Act unless and until there shall have been issued and transferred upon the books of the Canadian Northern Railway Company to the Minister of Finance and Receiver General of Canada, in trust for His Majesty, shares in the common stock of the Canadian Northern Railway Company of the par value of seven million dollars, which said stock and all rights appurtenant thereto shall be held for the benefit of His Majesty absolutely, and shall be deemed to be fully paid up, non-assessable and not subject to calls; provided that the said stock or any part thereof may be disposed of under the authority of Parliament upon such terms and conditions as it may determine and the proceeds of the sale thereof paid into the Consolidated Revenue Fund of Canada. Transfer of stock to Crown.
Proviso.

9. The Canadian Northern Railway Company is hereby authorized and empowered to issue and transfer to the Minister of Finance and Receiver General of Canada, in trust as aforesaid, from and out of the authorized capital shares of its common stock of the par value of seven million dollars fully paid up and non-assessable and not subject to calls as aforesaid, upon the consideration of the Governor in Issue of stock in return for subsidies.

Council

5 GEORGE V., A. 1915

Council undertaking to grant to the Canadian Northern Ontario Railway Company and the Canadian Northern Alberta Railway Company the subsidies referred to in section 2 of this Act upon the terms aforesaid, and such stock when so issued and transferred shall be deemed fully paid without further or other consideration.

3-4 GEORGE V.

CHAP. 46.

An Act to authorize the granting of Subsidies in aid of the construction of the railways and bridge therein mentioned.

[Assented to 6th June, 1913.]

HIS Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The Railway Subsidies Act, 1913*. Short title.

2. The Governor in Council may grant a subsidy of \$3,200 per mile towards the construction of each of the undermentioned lines of railway (not exceeding in any case the number of miles hereinafter respectively stated), which shall not cost more on the average than \$15,000 per mile for the mileage subsidized, and towards the construction of each of the said lines of railway, not exceeding the mileage hereinafter stated, which shall cost more on the average than \$15,000 per mile for the mileage subsidized, a further subsidy beyond the sum of \$3,200 per mile of fifty per cent on so much of the average cost of the mileage subsidized as is in excess of \$15,000 per mile, such subsidy not exceeding in the whole the sum of \$6,400 per mile:—

1. To the Margaree Coal and Railway Company, Limited, for the following lines of railway:—

(a) from a point on the Intercolonial Railway near Orangedale to St. Rose; not exceeding 46 miles;

(b) from a point on the Intercolonial Railway near McIntyre lake to Caribou cove, Port Malcolm, Richmond county; not exceeding 4 miles;

the said subsidies being granted in lieu of subsidy granted by chapter 51 of 1910, section 1, item 4; not exceeding 50 miles.

5 GEORGE V., A. 1915

2. To the Northern New Brunswick and Seaboard Railway Company, for a line of railway from the Drummond Mines at Austin brook, a branch of the Nipisiguit river above Great Falls in the county of Gloucester to a point on the Intercolonial Railway where it intersects the branch line* from Bathurst station to Bathurst Harbour, in lieu of the subsidy granted by chapter 48 of 1912, section 2, item 24; not exceeding 16.9 miles.

3. To the Tobique and Campbellton Railway Company, for a line of railway from Plaster Rock along the Tobique river to Riley brook, in lieu of subsidy granted by chapter 51 of 1910, section 1, item 15; not exceeding 28 miles.

4. To the St. John and Quebec Railway Company, for a line of railway from Andover to St. John, New Brunswick, exclusive of a railway bridge across the St. John river, at or near Mistake, and a railway bridge across the Kennebecas river at or near Perry Point; in lieu of subsidy granted by chapter 48 of 1912, section 2, item 2; not exceeding 200 miles.

5. To the Lotbinière and Megantic Railway Company for a line of railway from a point at or near Lyster in Megantic county to a point at or near Lime Ridge in the township of Dudswell in the county of Wolfe, in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 23, for a line of railway between the points above mentioned; not exceeding 60 miles.

6. For a line of railway from a point on the Canadian Pacific Railway at or near Scotstown or Megantic to the International boundary, in lieu of the subsidy granted by chapter 40 of 1907, section 1, item 19; not exceeding 35 miles.

7. To the Little Nation River Railway Company for a line of railway from a point between Thurso and Montebello on the line of the Canadian Pacific Railway, northerly, in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 46; not exceeding 30 miles.

8. To the Erie, London and Tillsonburg Railway Company, for a line of railway from Port Burwell to London, passing through or near Vienna, Calton, Aylmer, Kingsmill and Belmont, in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 37; not exceeding 35 miles.

9. To the Tillsonburg, Lake Erie and Pacific Railway Company, for a line of railway from Ingersoll north to a junction with the St. Mary's and Western Ontario railway at Embro, in lieu of the subsidy granted by chapter 48 of 1912, section 2, item 12; not exceeding 10.38 miles.

10. To the Canadian Pacific Railway Company, for a line of railway from Gimli to a point on the Icelandic river at

SESSIONAL PAPER No. 20

at or near Riverton, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 39, for a line between the points above mentioned; not exceeding 30 miles.

11. To the Canadian Pacific Railway Company, for a line of railway from Moosejaw, in a northwesterly direction, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 40; not exceeding 123 miles.

12. To the Alberta Central Railway Company, for a line of railway from Red Deer to Rocky Mountain House, in lieu of the subsidy granted by chapter 63 of 1908, section 1, item 38; not exceeding 70 miles.

13. To the Kettle Valley Railway Company, for the following lines of railway:—

(a) from Merritt to Penticton Wharf; not exceeding 145 miles;

(b) from a point on the line between Merritt and Penticton Wharf, at or near Penticton, to Midway; not exceeding 135 miles;

(c) from a point on the line between Merritt and Penticton Wharf, about 25 miles south of Merritt, to a point on the Fraser river near Hope station; not exceeding 55 miles;

the said subsidies being granted in lieu of the subsidies granted by chapter 51 of 1910, section 1, item 42; not exceeding in all 335 miles.

14. To the Calgary and Fernie Railway Company for a line of railway from Michel or Sparwood, in a northerly direction via the headwaters of the Elk river and Kananaskis Pass to a point at or near the city of Calgary, in lieu of the subsidy granted by chapter 48 of 1912, section 2, item 43; not exceeding 100 miles.

3. The Governor in Council may grant the subsidy Subsidy for bridge. hereinafter mentioned towards the construction and completion of the bridge hereinafter mentioned, that is to say:—

To the Burrard Inlet Tunnel and Bridge Company towards the construction and completion of a bridge over the Second Narrows of Burrard Inlet, as authorized by chapter 74 of 1910, in lieu of the subsidy granted by chapter 48 of 1912, section 3, item 1; not exceeding \$350,000.

4. In this Act, unless the context otherwise requires, the expression "cost" means the actual, necessary and reasonable cost, and shall include the amount expended upon any bridge, up to and not exceeding \$25,000, forming part of the line of railway subsidized not otherwise receiving any bonus, but shall not include the cost of equipping the railway or the cost of terminals or the cost of right of way "Cost" defined.
of

of the railway in any city or incorporated town; and such actual, necessary and reasonable cost shall be determined by the Governor in Council, upon the recommendation of the Minister of Railways and Canals, and upon the report of the chief engineer of the Department of Railways and Canals, certifying that he has made or caused to be made an inspection of the line of railway for which payment of subsidy is asked, and careful inquiry into the cost thereof, and that in his opinion the amount upon which the subsidy is claimed is reasonable, and does not exceed the true, actual and proper cost of the construction of such railway.

How
subsidies
shall be
paid.

5. The subsidies hereby authorized towards the construction of any railway or bridge shall be payable out of the Consolidated Revenue Fund of Canada, and may, unless otherwise expressly provided in this Act, at the option of the Governor in Council, on the report of the Minister of Railways and Canals, be paid as follows:—

- (a) Upon the completion of the work subsidized; or,
- (b) By instalments, on the completion of each ten-mile section of the railway, in the proportion which the cost of such completed section bears to that of the whole work undertaken; or,
- (c) Upon the progress estimates on the certificate of the chief engineer of the Department of Railways and Canals that in his opinion, having regard to the whole work undertaken and the aid granted, the progress made justifies the payment of a sum not less than thirty thousand dollars; or,
- (d) With respect to (b) and (c), part one way, part the other.

Conditions.

6. The subsidies hereinbefore authorized to be granted to companies named shall, if granted by the Governor in Council, be granted to such companies respectively; the other subsidies may be granted to such companies as establish to the satisfaction of the Governor in Council their ability to construct and complete the said railways and bridges respectively; all the lines and the bridges for the construction of which subsidies are granted, unless they are already commenced, shall be commenced within two years from the first day of August, one thousand nine hundred and thirteen, and completed within a reasonable time, not to exceed four years from the said first day of August, to be fixed by the Governor in Council, and shall also be constructed according to descriptions, conditions and specifications approved by the Governor in Council on the report of the Minister of Railways and Canals
and

SESSIONAL PAPER No. 20

and specified in each case in a contract between the company and the said Minister, which contract the Minister, with the approval of the Governor in Council, is hereby empowered to make. The location also of such subsidized lines and bridges shall be subject to the approval of the Governor in Council.

7. The granting of such subsidies and the receipt thereof by the respective companies shall be subject to the condition that the Board of Railway Commissioners for Canada may at all times provide and secure to other companies such running powers, traffic arrangements and other rights as will afford to all railways connecting with the railway and bridges so subsidized reasonable and proper facilities in exercising such running power, fair and reasonable traffic arrangements with connecting companies, and equal mileage rates between all such connecting railways; and the said Board shall have absolute control, at all times, over the rates and tolls to be levied and taken by any of the companies, or upon any of the railways and bridges hereby subsidized: Provided always that any decision of the said Board made under this section may be at any time varied, changed or rescinded by the Governor in Council, as he deems just and proper.

8. Every company receiving a subsidy under this Act, its successors and assigns, and any person or company controlling or operating the railway or portion of railway subsidized under this Act, shall each year furnish to the Government of Canada transportation for men, supplies, materials and mails over the portion of the lines in respect of which it has received such subsidy, and, whenever required, shall furnish mail cars properly equipped for such mail service; and such transportation and service shall be performed at such rates as are agreed upon between the Minister of the department of the Government for which such service is being performed and the company performing it, and, in case of disagreement, then at such rates as are approved by the Board of Railway Commissioners for Canada; and in or towards payment for such charges the Government of Canada shall be credited by the company with a sum equal to three per cent per annum on the amount of the subsidy received by the company under this Act.

9. As respects all railways and bridges for which subsidies are granted by this Act, the company at any time owning or operating any of the railways or bridges shall, when required, produce and exhibit to the Minister of Railways and Canals, or any person appointed by him, all books, accounts and

and vouchers showing the cost of constructing the railway or bridge, the cost of operating it, and the earnings thereof.

As to
Canadian
steel rails.

10. The Governor in Council may make it a condition of the grant of the subsidies herein provided that the company shall lay the railway with new steel rails and fastenings made in Canada and shall purchase all materials and supplies required for the construction of the railway and bridges and the rolling stock for the first equipment of the railway, from Canadian producers, if such rails, fastenings, materials, supplies and equipment are procurable in Canada of suitable quality and upon terms as favourable as elsewhere, of which the Minister of Railways and Canals shall be the judge.

Mode of
payment of
per air
railway
subsidies.

11. Whenever a contract has been duly entered into with a company for the construction of any line of railway hereby subsidized, the Minister of Railways and Canals, at the request of the company, and upon the report of the chief engineer of the Department of Railways and Canals and his certificate that he has made careful examination of the surveys, plans and profile of the whole line so contracted for, and has duly considered the physical characteristics of the country to be traversed and the means of transport available for construction, naming the reasonable and probable cost of such construction, may, with the authorization of the Governor in Council, enter into a supplementary agreement, fixing definitely the maximum amount of the subsidy to be paid, based upon the said certificate of the chief engineer and providing that the company shall be entitled to be paid, as the minimum, the ordinary subsidy of \$3,200 per mile, together with sixty per cent of the difference between the amount so fixed and the said \$3,200 per mile, if any; and the balance, forty per cent, shall be paid only on completion of the whole work subsidized, and in so far as the actual cost, as finally determined by the Governor in Council upon the recommendation of the Minister of Railways and Canals, and upon the report and certificate of the said chief engineer, entitles the company thereto: Provided always—

- (a) that the estimated cost, as certified, is not less on the average than \$18,000 per mile for the whole mileage subsidized;
- (b) that no payment shall be made except upon a certificate of the chief engineer that the work done is up to the standard specified in the company's contract;
- (c) that in no case shall the subsidy exceed the sum of \$6,400 per mile.

3-4 GEORGE V.

CHAP 53.

An Act to authorize the granting of Subsidies to the Government of the Province of Ontario in aid of the construction of the Temiskaming and Northern Ontario Railway.

[Assented to 6th June, 1913.]

WHEREAS the Government of the province of Ontario Preamble. has constructed a line of railway known as the Temiskaming and Northern Ontario Railway, from North Bay on the Canadian Pacific Railway, and at a junction with the Toronto line, so called, of the Grand Trunk Railway, to Cochrane on the Grand Trunk Pacific Railway, and several branches thereof, and has them under operation; and whereas the line of railway from North Bay to Cochrane makes a through connection for the Transcontinental Railway with Toronto, and also with Montreal and Quebec, and being, as such, a work of national and not merely provincial utility: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The Temiskaming and Northern Ontario Railway Aid Act*. Short title.

2. The Governor in Council may grant to the Government of the province of Ontario, in consideration of its having constructed each of the undermentioned lines of railway (not exceeding in any case the number of miles hereinafter respectively stated), a subsidy not exceeding \$6,400 per mile:—

Subsidies to Government of Ontario for construction of railways.

(i) For the line of railway from North Bay on the Canadian Pacific Railway to Cochrane on the Grand Trunk Pacific Railway; not exceeding 252.8 miles.

(ii)

- (ii) For the following branch lines of railway:—
- (a) From Englehart to Charlton; not exceeding 7·8 miles;
 - (b) From Cobalt to Kerr Lake; not exceeding 3·9 miles;
 - (c) From Iroquois Falls to Timmins; not exceeding 33·2 miles;
 - (d) From Earlton to Elk Lake City; not exceeding 28·5 miles;
 - (e) From Iroquois Falls Station to Iroquois Falls; not exceeding 7·25 miles.

How
subsidies
shall be paid.

3. The subsidies hereby authorized shall be payable out of the Consolidated Revenue Fund of Canada at the option of the Governor in Council, and may be paid upon the certificate of the chief engineer of the Department of Railways and Canals as to the mileage constructed, in such manner and in such amounts, and subject to such conditions, if any, as the Governor in Council deems expedient.

Commence-
ment of Act.

4. This Act shall come into force on a day to be fixed by proclamation of the Governor in Council published in *The Canada Gazette*.
